Introduction

The Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund) was created by the Legislature in 1986 to provide a readily available funding source to investigate, contain, clean up and take other necessary action to protect public health, welfare and the environment from the release or threatened release of oil or a hazardous substance. Alaska Statute 46.080.030 states: "It is the intent of the legislature and declared to be the public policy of the state that funds for the abatement of a release of oil or a hazardous substance will always be available." (SLA 1986 Sec.1 Ch. 59).

The statutes governing the Response Fund were amended in 1989, 1990, 1991, 1994, 1999, and 2006. These amendments increased the scope that defines how the Response Fund can be used and it also increased the Department of Environmental Conservation's (DEC's) reporting requirements. In addition, the 1994 amendment made major changes to the Response Fund structure by dividing the Response Fund into two separate accounts. The first account is the response account and the second account is the prevention account. The changes became effective on July 1, 1994. The diagram on page three illustrates the current structure of the Response Fund.

The 1999 amendment changed the reporting requirement on the status of the Response Fund from an annual report to the Legislature to a biennial report. The 2006 amendment changed the surcharge levied on crude oil produced in the state. The legislation imposed a prevention account surcharge of $.04 (formerly $.03) per barrel of oil produced from each lease or property in the state, less any oil the ownership or right to which is exempt from taxation. Sec. 26 of AS 43.55.201 was also amended to change the response account surcharge from $.02 to $.01 per barrel of oil produced from each lease or property in the state.

Response Account

The response account may be used to finance the state's response to an oil or hazardous substance release disaster declared by the governor, or to address a release or threatened release that poses an imminent and substantial threat to the public health or welfare, or to the environment. To access the response account for any incident other than a declared disaster, DEC must notify the governor and the Legislative Budget and Audit Committee within 120 hours of using the money from this account.

The response account is financed by a $.01 per barrel surcharge and money recovered from responsible parties. The surcharge is suspended when the combined balance of the surcharge account; the response mitigation account and the unreserved and unobligated balance in the response account reach $50 million. The account balance reached $50 million for the first time during the quarter ending December 31, 1994. Therefore, beginning April 1, 1995, the surcharge collection was suspended.

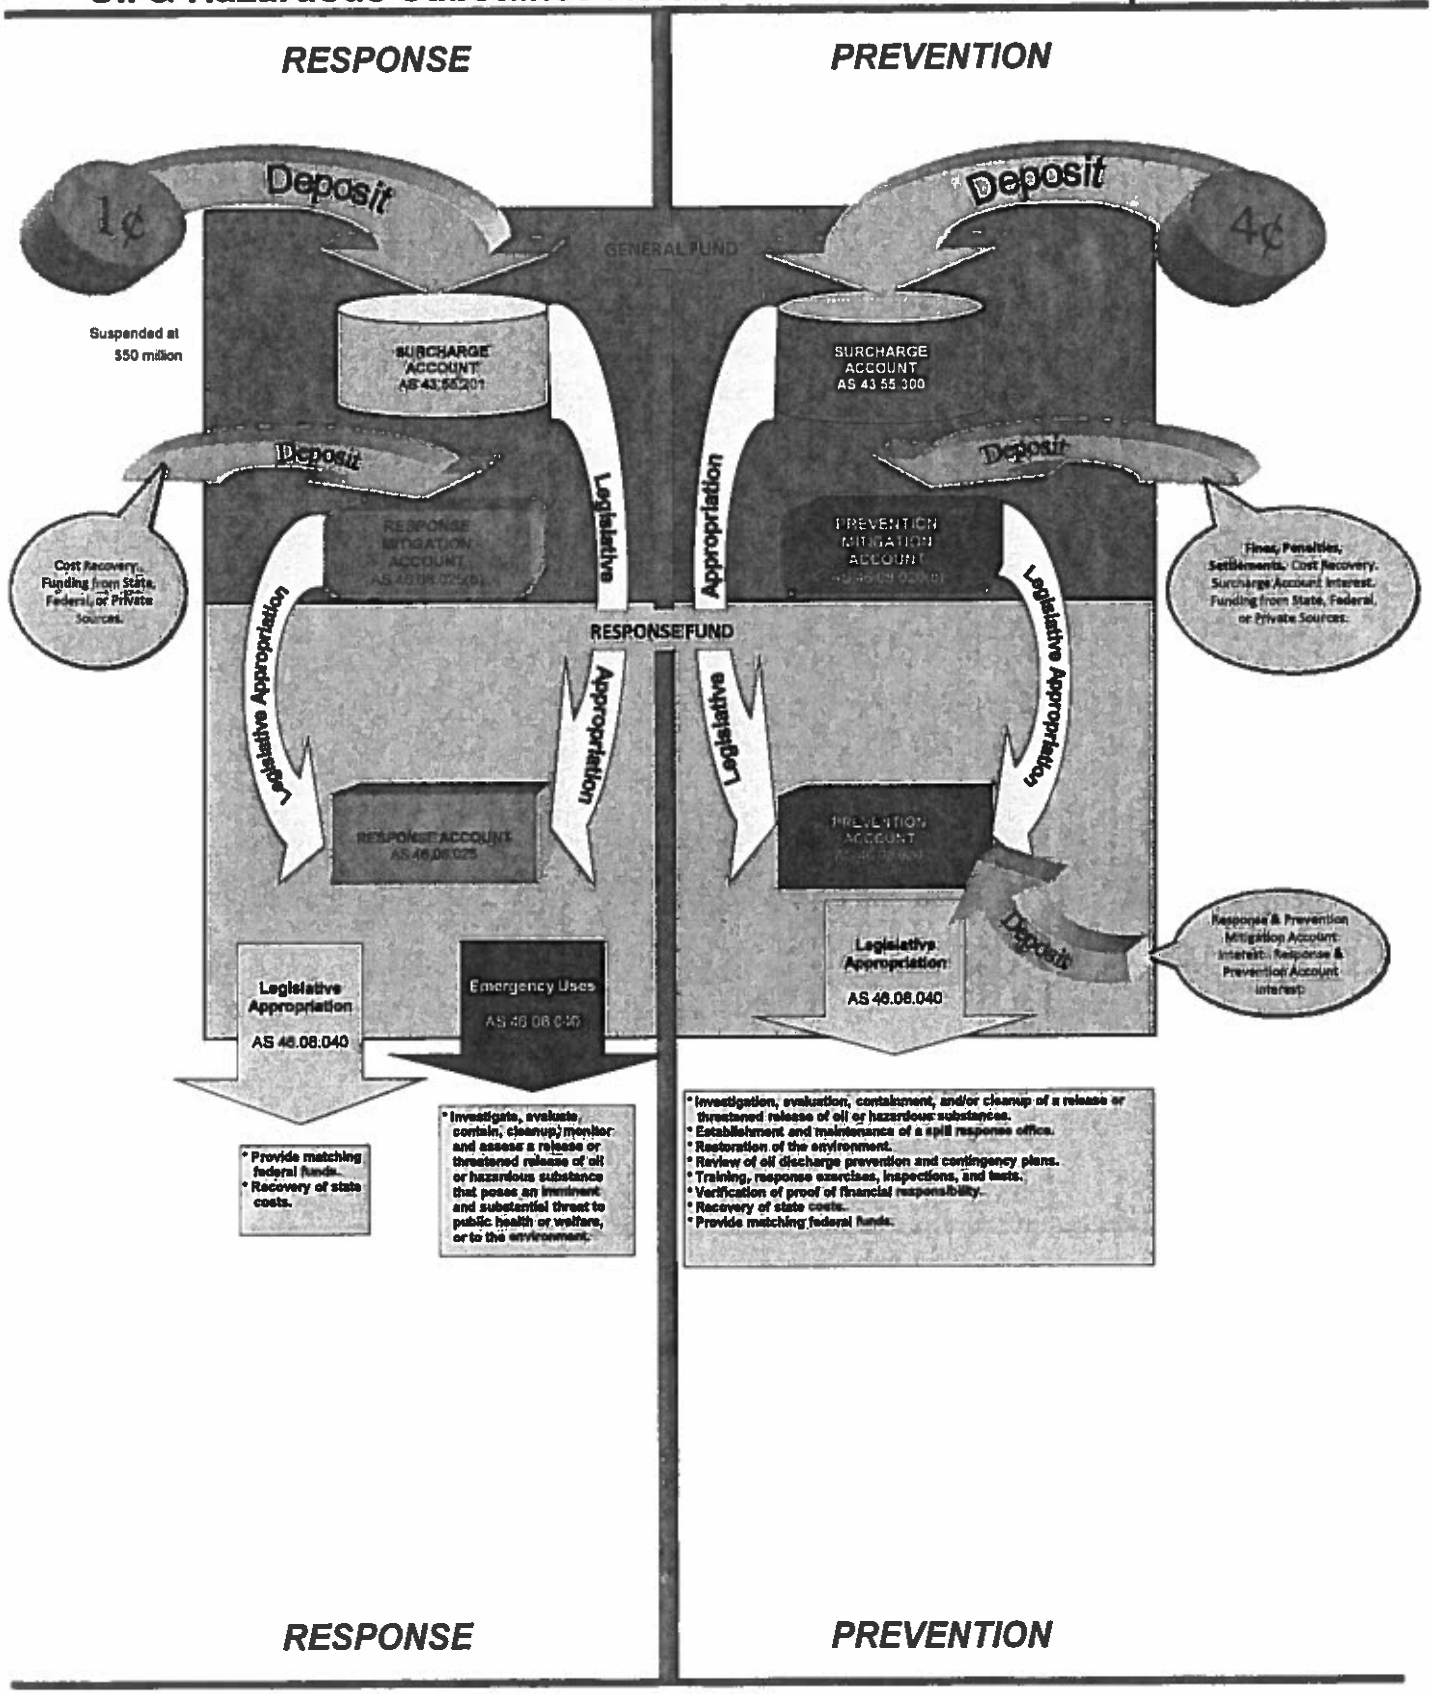

Access to the fund for the response to the North Slope Pipeline spills occurred on November 20, 2006. This action lowered the balance of the account below $50 million. On April 1, 2007, the Department of Administration imposed the $.01 cent surcharge to restore the balance to $50 million. The combined balance of the response account as of June 30, 2014 was $46.4 million. As a result, the $.01 cent surcharge has remained on through the Fiscal Year 2014.

Prevention Account

The prevention account may be used to respond to oil and hazardous substance releases that have not been declared a disaster by the governor. In addition, the prevention account is also used to fund Alaska's oil and hazardous substance release response and prevention programs. The Legislature appropriates money from the prevention account to support DEC for spill prevention and preparedness planning activities (AS 46.08.040(a)(2)).

The prevention account is financed with a $.04 per barrel surcharge and fines, settlements, penalties and interest. The prevention account balance based on the Department of Revenue's 2014 fall forecast shows an unobligated balance of $6.9 million at the end of FY2014 with a projected budget deficit of $797.6 at the end of FY2015. We expect the prevention account deficit to increase significantly by the end of FY2016 due to less than anticipated investment income and collections from cost recovery.

FY2013-2014 Biennial Report on Response Fund

Table C - AS 46.080.060(a)(2)

Revenue Source History

This table summarizes the various funding sources appropriated to the Oil & Hazardous Substance Release Prevention and Response Fund (Response Fund) since FY02. "Program Receipts" are revenues collected from an outside party for specific program expenditures. "Mitigation Revenue" includes interest earned on surcharge deposits, cost reimbursement, fines, penalties or settlement payments from parties financially responsible for incidents or sites for which the state expended money from the Response Fund. "Oil Surcharge Revenue" represents collection in the prior year of the conservation surcharge imposed on oil produced in the state.

(In Thousands)

Fiscal Year	Program Receipts	Mitigation Accounts	3 Cents Oil Surcharge	4 Cents Oil Surcharge Note 1	1 Cent Oil Surcharge Note 2	Other General Fund	Total
FY02		$6,180.0	$9,432.0				$ 15,612.0
FY03		$6,490.0	$9,597.0				$ 16,087.0
FY04		$2,840.1	$9,232.9				$ 12,073.0
FY05		$1,392.9	$9,052.5				$ 10,445.4
FY06		$1,689.0	$8,330.5				$ 10,019.5
FY07		$3,731.1	$7,758.7			$1,800.0	$ 13,289.8
FY08		$2,316.7	$2,880.9	$6,629.7	$593.2	$2,000.0	$ 14,420.5
FY09		$8,248.9		$9,476.2	$2,333.7	-	$ 20,058.8
FY10		$1,968.0		$8,922.5	$2,405.1	-	$ 13,295.6

FY13		$1,878.3		$7,558.7	$1,889.7		$ 11,326.7
FY14		$13,146.4		$6,238.2	$1,559.6		$ 20,944.2
FY15		$1,051.6		$7,015.3	$1,753.8		$ 9,820.7
Total		**$ 60,083.6**	**$ 56,284.5**	**$ 61,831.8**	**$ 14,532.8**	**$ 3,800.0**	**$ 196,532.7**

Note 1: AS 43.55.300 is ammended to change the surcharge levied on every producer of oil from $.03 to $.04 per barrel of oil produced from each lease or property in the state, less any oil the ownership or right to which is exempt from taxation. The amendment changing surcharge to $.04 was effective on April 1, 2006.

Note 2: The amendment changing the surcharge to $.01 was effective on April 1, 2006.

Tables H, I, and **J** list all the sites inventoried in the DEC's contaminated sites and leaking underground storage tank sites database as of June 30, 2014.

Table H summarizes the numbers of active sites by location and by priority ranking based on the threat to the public health or welfare or to the environment (AS 46.08.060(b)(2)). The database contains the following totals for each priority category.

High Priority	100
Medium Priority	1169
Low Priority	745
Unranked	250
Total Active Sites	**2,264**

Table I lists all DEC active Contaminated and Leaking Underground Storage Tanks sites alphabetically by location as June 30, 2014. (AS 46.08.060(b)(1))

Table J lists all DEC closed Contaminated and Leaking Underground Storage Tanks sites alphabetically by location as of June 30, 2014. (AS 46.08.060(b)(1))

Appendix 1: Community Spill Response – AS 46.08.060(a)(3) - No response fund costs were incurred for communities in Fiscal years 2013 and 2014.

Appendix 2: Project Summaries – AS 46.08.060(a)(4) - This appendix summarizes information for contaminated sites or pollution incidents for which the department made direct expenditures of $10,000.00 or more during Fiscal years 2013 & 2014 from the Oil and Hazardous Substance Release Prevention and Response Fund. Indirect expenditures, expenditures paid from other sources and expenditures for budgeted legal services provided by the Department of Law are not included. Direct department response activities involve cleanup, control, containment, investigation and oversight.

Site type: Shore based refined fuel tank farm

Situation
The spill occurred on January 11th 2010, as fuel was being pumped to underground storage tank N-7 in the Helmet Creek Tank Farm from the Tank Vessel *Al Amerat*, moored at the fuel pier in Sweeper Cove. An estimated 142,800 gallons of diesel fuel escaped from tank N-7 during fuel transfer operations from the vessel to the tank. The fuel moved into the secondary containment surrounding the tank, from which valves were open to a drainage system leading to Helmet Creek. The fuel overwhelmed the system's oil/water separator, resulting in a fuel release to Helmet Creek and the small boat harbor at its terminus. During the Month of January a unified command consisting of ADEC, USCG and Adak Petroleum managed a field response to contain and recover the spilled product.

FY13 Actions:
DoL continues to investigate this case for possible civil actions

FY14 Actions:
DoL continues to investigate this case for possible civil actions

FY15 and FY16 Projected Actions:
DoL continues to investigate this case for possible civil actions

Project/Site Name:	**BPXA H-Pad Well 8 3**	
Location:	West Prudhoe Bay, AK	Hazard ID Number:
Project Manager:	Patrik Sartz	Ledger Code: 14347460
Primary RP:	BP Exploration Alaska, Inc.	

Site Management Category: PRP

Site type:

Situation

On April 28, 2014, a dead leg off the well H-08 flow line ruptured, releasing a large amount of natural gas, crude oil and produced water. Approximately 33 acres of snow-covered tundra and two acres of gravel pad were sprayed with an oily mist to varying degrees of coverage. For more than one week, cleanup personnel worked on clearing oil-contaminated snow from the tundra and removing oil that coated areas on well housing and piping on H Pad. Approximately 1,600 cubic yards of contaminated snow were removed and transported to BP's grind and inject facility for final disposal. Recovered melt-water and assorted fluids totaled 1,788 barrels, which were taken to Pad 3 for injection disposal. A final inspection of the spill area was completed in July 2014.

FY15 and FY16 Projected Actions:

State actions projected for FY15 and FY16 consist of monitoring the tundra restoration of the site.

Project/Site Name:	**BPXA Lisburne 3 PCL**	
Location:	East Prudhoe Bay, AK	Hazard ID Number:
Project Manager:	John Ebel	Ledger Code: 14281660
Primary RP:	BP Exploration Alaska, Inc.	

Site Management Category: PRP

Site type: Oil Production Facility

Situation
On November 29, 2009, a BP Exploration Alaska, Inc. (BPXA) operator making a routine check discovered a spill at the Lisburne Production Facility. The spill was from an 18-inch three-phase common line carrying a mixture of crude oil, produced water, and natural gas. A rupture to the pipe released approximately 1,100 barrels (46,000 gallons) of oily material to a snow-covered, gravel pipeline-access road and tundra. BPXA estimated the oily material spread over approximately 31,226 square feet. Approximately one-fourth of the area received liquid product and windblown spray impacted the remaining area.

Work crews used a variety of manual and mechanical recovery tactics to remove the oil-misted snow and the oil embedded in the tundra. Lightly-oiled snow was removed with snow scoops and transported by snow machine to containment bins. Response crews removed the liquid product using a flush and vacuum recovery process performed in a containment cell, along with mechanical equipment designed to remove embedded oil. Analytical samples collected after the cleanup was completed demonstrated that response actions were adequate.

The approved site restoration plans were executed before and after the breakup season. Site monitoring will continue over the next five years.

FY13 Actions:
State actions in FY13 consisted of monitoring site restoration.

FY14 Actions:
State actions in FY13 consisted of monitoring site restoration. Settlement costs were also incurred in FY14.

Proposed FY 15 Actions:
No additional actions are anticipated for this site.

Project/Site Name:	**Dalton Highway Truck Rollover MP 309**	
Location:	Dalton Highway MP 309.5, AK	Hazard ID Number:
Project Manager:	Wes Ghormley	Ledger Code: 14344660
Primary RP:	Eggor Enterprises Trucking	

Site Management Category: PRP

Site type:

Situation

On February 11, 2014, Eggor Enterprises owner of a truck carrying a cargo of ultra-low sulfur diesel was northbound on the Dalton Highway and was forced into the ditch to avoid a collision with a southbound semi-tractor trailer stopped on the Dalton Highway. This incident resulted in a release of approximately 2,189 gallons of their fuel cargo. The fuel released over a buried section of the Trans-Alaska Pipeline (TAPS) owned and operated by Alyeska Pipeline Service Company. Eggor Enterprises was hauling fuel for Colville, Inc., a North Slope fuel distributor. Response actions initiated by Colville consisted of passive absorbent recovery, and contaminated snow and limited soil removal. Work stopped when underground utility "caution tape" was exposed. Contaminated soil removal was suspended for several weeks while response plans were being developed, and qualified contractors capable of conducting excavation over the TAPS line and underground utilities were acquired. Work was completed in May 2014.

FY15 and FY16 Projected Actions:

ADEC will complete the final review of the analytical data collected during excavation to determine if the site will be closed or transferred to the Contaminated Sites Program.

Project/Site Name: **M/V Aiviq Tow**
Location: Kodiak Island
Project Manager: Steven Russell
Primary RP: Shell Exploration and Production

Hazard ID Number:
Ledger Code: 14317560

Site Management Category: PRP

Site type: Mobile Offshore Drilling Unit (MODU)

Situation
On December 27th the M/V Aiviq was towing the mobile offshore drilling unit Kulluk from Dutch Harbor AK to Seattle when they lost the tow line and the rig was adrift approximately 35 miles west of Kodiak Island AK. A unified Command was formed consisting of Shell E&P, the Noble Corporation, USCG, ADEC and the Kodiak Island Borough. During the next several days an Incident Management team consisting of approximately 700 responders worked Incident Command System sections of Logistic, Marine Salvage, Response Operations, Public Affairs and others, to prepare for a catastrophic loss of the approximately 130,000 gallons of diesel fuel on board the MODU. On December 31st the Kulluk grounded near Ocean Bay on Sitkalidak Island on the West side of Kodiak Island. The Kulluk was refloated on January 6th without loss of fuel from the MODU. A total of approximately 350 gallons of diesel fuel were lost from the MODU life capsules which were swept from the deck during hurricane force winds and seas.

FY13 Actions:
State actions in 2013 consisted of emergency response activities by ADEC, ADF&G, ADNR and ADEC term contractors, in the incident management team or on site field work.

FY14 Actions:
None

FY15 and FY16 Projected Actions:
None expected

Project/Site Name:	**Mapco/Flint Hills North Pole Refinery**		
Location:	North Pole City Limits	Hazard ID Number:	Numerous
Project Manager:	Kim DeRuyter	Ledger Code:	14804360
Primary RP:	Flint Hills Resources, Inc. (FHR)		

Site Management Category: RP Lead

Situation:

The North Pole Refinery (NPR) was built on land owned by the State of Alaska in the 1970s and began refining oil in 1977. MAPCO/Williams operated the facility until Flint Hills Resources (FHR) purchased it in 2004. Prior to selling the refinery, Williams acquired the 240 acre parcel of land beneath it and conveyed the land to FHR in the 2004 sale. Leaks and spills of petroleum and industrial wastewater have occurred ever since the refinery's start-up. Since the 1980s DEC has required investigation and cleanup of petroleum-contaminated groundwater in the subsurface of the refinery property.

Sulfolane has been used at the refinery since 1985. In 2001, monitoring revealed sulfolane within the plume of petroleum contamination. Little was known about this unregulated industrial solvent, but it was assumed the contamination was confined to refinery property. In 2009, sulfolane was detected in private drinking water wells north of the refinery. Since then, FHR has provided alternative water supplies for all North Pole residences and businesses with sulfolane detections in their wells, plus locations in a "buffer zone" outside of the sulfolane plume.

The plume is currently 3.5 miles long by 2 miles wide and at least 300 feet deep. FHR is currently supplying water to approximately 400 impacted properties and an additional 200 properties in the buffer zone. The plume is unstable and continues to migrate to the north-west. In 2006, DEC set a cleanup level of 350 ppb. A more stringent interim cleanup levels for sulfolane of 25 ppb was set in 2010 in response to evolving information from federal health agencies. In 2013, DEC set a cleanup level of 14 ppb based on an EPA report. The cleanup level was vacated by the DEC Commissioner in 2014. Currently there is no cleanup level in place at the site.

FY14 Actions:

Work plans, technical reports, remediation-related documents including a Feasibility Study, an Alternative Water Supply Management Plan and a Revised Interim Remedial Action Plan were reviewed. A surface water study was performed to determine if sulfolane can be detected in gravel pits or the Chena Slough. Soil samples were collected to determine if contaminated groundwater used for lawn or garden watering would contaminate soil. A stable isotope study of groundwater both above and below permafrost was initiated to better understand the groundwater flow patterns around the permafrost and potentially help identify where the contamination migrates below the permafrost. Studies were initiated to investigate the mechanism of sulfolane removal by FHR's water treatment systems and the breakdown of sulfolane and test for potential toxic daughter products. An interim best management practices (BMP) plan was developed to assist with dewatering projects within or near the plume. Public outreach efforts in the form of newsletters, public meetings, were conducted.

FY15 Actions:

The state filed a lawsuit against FHR and Williams in March 2014 to resolve issues with Responsible Party status, State cost recovery, and long term funding of solutions to the groundwater issue. In response

to a request by FHR for an adjudicatory hearing regarding the sulfolane cleanup level, the commissioner vacated the cleanup level set in 2013 and remanded the matter to SPAR for further development of the record and decision on a cleanup level at the site. In response to the commissioner's decision, DEC hired TERA, an independent, non-profit organization, to organize and conducted a panel of experts to review the available toxicology information and make a recommendation on the most scientifically supportable toxicity value for sulfolane. An Onsite Cleanup Plan, including an Alternative Water Supply Management Plan, Operation, Monitoring, and Maintenance Plan, Long-Term Monitoring Plan, was approved by the Department after many months of negotiations between DEC management, Department of Law and FHR. North Pole stable isotope studies are ongoing. Biodegradation studies are ongoing but nearing completion. Field verification testing was performed to confirm that the dewatering management options in the best management practices plan do not negatively impact the soil. A final dewatering BMP will be prepared.

FY16 and FY17 Projected Actions:

Continued monitoring of the offsite sulfolane plume and private drinking water wells will be conducted by FHR, and an offsite cleanup plan is anticipated. Onsite monitoring under the approved Cleanup Plan will be initiated by FHR. Following release of the final report from the expert panel review, DEC will investigate the cleanup level options at the site. Considerable public outreach is anticipated in response to the cleanup level once it is established. Additional negotiations will take place to resolve issues involved in the lawsuit initiated in 2015.

Project/Site Name:	**NANA Diesel Truck Rollover MP 299**	
Location:	Dalton Highway MP 299.4, AK	Hazard ID Number:
Project Manager:	Wes Ghormley	Ledger Code: 14349460
Primary RP:	NANA Oilfield Services	

Site Management Category: PRP

Site type:

Situation

On June 7, 2014 a northbound NANA Oilfield Services fuel tanker departed the Dalton Highway near Slope Mountain at mile post (MP) 299.4 releasing approximately 2,561 gallons of ultra-low sulfur diesel fuel onto tundra grass. Fuel followed down slope hundreds of feet in a water drainage through tundra grass and willow plant community, eventually reaching a small stream at the base of the slope. The release affected some of the underground utilities owned by TAPS.

Response actions consisted of developing four shore seal boom treatment cells, which were combined with numerous river and absorbent boom containment and recovery cells. A flush and recovery tactic allowed fuel to release from the plant community and float with the deluge water to recovery points at the treatment cells. Collections cells developed along the stream channel kept fuel contained within the affected area. Analytical monitoring of the plant community, soil and water chemistry will continue over next several years.

FY15 and FY16 Projected Actions:

State actions projected for FY15 and FY16 consist of monitoring the tundra for regrowth and evaluating the site for additional restoration needs.

Project/Site Name: **Q2 Shallow Gas Kick**
Location: Colville River Delta, AK
Project Manager: Wes Ghormley
Primary RP: Repsol E&P USA

Hazard ID Number:
Ledger Code: 14322460

Site Management Category: PRP

Site type: Exploratory Well

Situation
On February 15, 2012, Repsol contractor Nabors Drilling was drilling an exploratory well when the drill penetrated a shallow gas pocket at a depth of 2,523 feet, resulting in a gas kick. The gas kick drove drilling mud, down-hole materials and water out of the well and through the gas diverter onto the ice pad and adjacent snow-covered tundra. In the attempt to control the gas kick 42,000 gallons of drilling mud was also pumped down hole. This mud also came to the surface through the diverter. The gas diverter is a pipe that extended approximately 75 feet from the drilling rig toward the edge of the pad.

Approximately 6,286 cubic yards of spilled material were removed from the snow covered tundra. In addition, 2,402 cubic yards of down-hole material and 116,928 gallons of water-based mud and fresh water from the steam units were recovered from the drilling pad during the initial response.
A surveying contractor hired by Repsol estimated that 21,114 barrels of down-hole material were released to the tundra during the initial blow-out and calculated the total impacted area to be 23.75 acres. An area of 16.76 acres of lightly misted material was determined to be unrecoverable and no cleanup occurred in this zone.

FY13 Actions:
State actions in 2013 consisted of a site visit for field inspection and confirmation sampling.

FY14 Actions:
Final site inspection

FY15 and FY16 Projected Actions:
This site has been closed, no additional actions are expected.

Project/Site Name:	**Rampart Diesel Spill**	
Location:	Rampart Village Airport Road, AK	Hazard ID Number:
Project Manager:	Paul Lhotka	Ledger Code: 14333060
Primary RP:	Rampart Village, AK	

Site Management Category: PRP

Site type:

Situation
On April 11, 2013, a tank trailer being towed by bulldozer down a snow-covered road in the village of Rampart slid off the road and overturned. The bulldozer operator inadvertently punctured the tank while attempting to right it, spilling about 2,750 gallons of diesel fuel to the forest floor, roughly 150 yards from the Yukon River. Two NART staff worked on-site with local responders to recover nearly 1,200 gallons of fuel from the tank and remove the tank from the spill site. PERP response equipment mobilized from Fairbanks for use during the response included sorbents, pumps and hoses, personal protective equipment, hand and power tools, and a 1,500-gallon portable tank. PERP hired term contractor Emerald Alaska to collect contaminated snow and contain the spill. Continuing the cleanup under contract to the Village of Rampart, Emerald excavated contaminated soil from the 3,800-square-foot spill site and disposed of waste and oily water generated by the response. The NART project manager is currently evaluating whether this case should continue to be managed by PERP or be transferred to the Contaminated Sites Program.

FY14 Actions:
State actions in 2014 consisted of transferring this case to the Contaminated Sites Program.

FY15 and FY16 Projected Actions:
No additional response actions expected

Project/Site Name: **St. Lawrence Oiled Wildlife**
Location: Gambell, AK
Project Manager: Ashley Adamczak
Primary RP: Fish & Wildlife Protection

Hazard ID Number:
Ledger Code: 14329860

Site Management Category: PRP

Site type:

Situation
On November 7, 2012, ADEC received a report of oiled debris and wildlife in waters surrounding St. Lawrence Island. The United States Coast Guard (USCG) and ADEC, working with the University of Alaska Fairbanks Marine Advisory Program (UAFMAP), U.S. Fish & Wildlife Service, and the island communities of Gambell and Savoonga, investigated the incident. Laboratory analysis showed that oil samples collected from a spotted seal harvested for subsistence and from two bird carcasses were degraded refined heavy petroleum products. Overflights and shoreline surveys revealed no sheen or potential oil sources offshore, and oil samples taken from the wildlife did not match profiles of samples taken from potential onshore sources, which included drums of used oil.

FY14 Actions:
ADEC continued to receive notification of potentially oiled wildlife during the November-December months of 2013. ADEC worked with the USCG and the UAFMAP to sample the specimens and attempted to identify the source. The matter was complicated due to an outbreak of Avian Cholera. ADEC worked with the involved agencies to resolve discrepancies in reports and develop a procedure for notification in the event that more reports were made. Further investigation into the source of the contamination occurred, however a source was not identified.

FY15 and FY16 Projected Actions:
ADEC continues work with UAFMAP and USCG to develop standard sampling and analysis protocols to streamline reporting and fingerprinting process. An RSA is being developed to allow for UAFMAP to perform the sample collection in the field and forward to a USCG Scientific Support Coordinator approved laboratory for analysis. Further investigation into the source will continue.

Project/Site Name:	**Tug Pathfinder Grounding**	
Location:	Bligh Reef, Prince William Sound AK	Hazard ID Number:
Project Manager:	Steven Russell	Ledger Code: 14282260
Primary RP:	Crowley Maritime Corporation	

Site Management Category: PRP

Site type: Marine Vessel

Situation
The Crowley tug M/V Pathfinder was conducting sea ice scouting duties near the Prince William Sound vessel traffic lanes on December 23rd 2009. The vessel grounded on Bligh Reef approximately 30 miles south of Valdez, AK. The grounding resulted in approximately 6,500 gallons of marine diesel fuel being released into the waters of Prince William Sound. The five day response consisted of a Incident Management Team and field operations of Crowley, Alaska Chadux corp, ADEC and USCG. On December 27th the Pathfinder was relocated to the Port of Valdez and the remaining fuel on board was removed.

FY13 Actions:
Actions in 2013 consisted of the Department of Law conducting negations with Crowley Maritime regarding civil penalties relating to the discharge.

FY14 Actions:
Actions in 2014 consisted of the Department of Law conducting negations with Crowley Maritime regarding civil penalties relating to the discharge.

FY15 and FY16 Projected Actions:
Projected actions for 2015 and 2016 FYs are related to Department of Law civil penalty actions

Project/Site Name: **Yukon River Flood Galena**
Location: Galena City, AK
Project Manager: Ashley Adamczak
Primary RP: City of Galena, AK

Hazard ID Number:
Ledger Code: 14334760

Site Management Category: PRP

Site type:

Situation
On May 27, 2013, water backed up behind an ice jam on the Yukon River began to flood the city of Galena. The floodwaters dislodged, relocated and/or damaged thousands of items containing hazardous materials, including fuel storage tanks, electrical transformers, lead-acid batteries, vehicles, gas cylinders, drums and a variety of other containers. At the request of the Division of Homeland Security and Emergency Management and the City of Galena, DEC assumed direction of flood-related hazardous materials cleanup. To date more than 4,000 items have accumulated at a secure staging area in Galena, collected by Emerald and city cleanup crews or brought there by Galena residents. Materials recovered include various petroleum products, solvents, paint, and glycol, as well as potentially hazardous solid wastes such as refrigerators, electronic devices, and fire extinguishers. Emerald will work with air and barge freight services to remove the hazardous debris from Galena prior to winter. This response involved staff from every program in SPAR and every PERP section. PERP personnel have been present in Galena throughout the cleanup, helping determine the extent of contamination and overseeing cleanup activities. Using an approach similar to Shoreline Cleanup Assessment Technique, DEC staff developed a form and web map to help responders organize surveys for hazardous debris, inventory sites requiring cleanup, and track cleanup progress.

FY14 Actions:
State actions in 2014 consisted of response activities by ADEC in the incident management team or on site field work.

FY15 and FY16 Projected Actions:
In FY15 the final field work was concluded by removing the contamination at private residences that was caused by fuel tanks that were dislodged during the flood and identified to be a hazard during the FY14 field season.
No further work is planned.

Project/Site Name: **314 Wendell Avenue (formerly MC Commercial Cleaners)**
Location: Fairbanks Hazard ID Number: 3821
Project Manager: James Fish Ledger Code: 14981360
Primary RP: MC Commercial Laundry and Dry Cleaners

Site Management Category: CSP Lead
Site type: Laundry/Dry Cleaner

Situation:
Results from Phase I and Phase II environmental site assessments in 2000-2002 indicated chlorinated solvent releases in the Wendell Avenue area. In 2008, DEC conducted vapor intrusion assessments at three buildings in the vicinity of 314 Wendell Avenue and found solvents intruding into all the buildings. The highest concentrations were found at the former dry cleaner at 314 Wendell. The owner was unable to conduct the investigation so DEC completed a release investigation in 2009 of the site, and characterized the surrounding area along Wendell Avenue and down to the Chena River. Air concentrations above the Federal Agency for Toxic Substances and Disease Registry's acute values were found at 314 Wendell. High soil gas, groundwater and soil concentrations were also found at the site and in the surrounding area. Solvent contamination also was found in pore water samples collected at the interface with the Chena River, exceeding both groundwater cleanup levels and surface water quality standards. Vapor intrusion has been documented in three buildings and is strongly suspected in two to three others. DHHS undertook on-site consults with the 314 Wendell property owner and employees of the site, alerting them of the potential risks. The CSP installed and began operating a remedial sub-slab depressurization (SSD) and soil vapor extraction (SVE) system in 2010-11.

FY13 Actions:
Work consisted of operation and maintenance of the SSD and SVE remediation systems, with SVE-only operation during most of the FY (the SSD system was not operated after the building became unoccupied); a remedial system evaluation with a 28-day system shutdown test and collection of vapor intrusion data; and groundwater monitoring, which included monitoring well installation, development, and sampling, sampling soil for aquifer substrate characteristics and hydraulic conductivity, monitoring groundwater geochemistry, and using compound specific isotope analysis (CSIA) to understand the extent of contaminant attenuation. A pilot study was initiated to monitor subsurface microbiology in response to amendments to induce biodegradation of chlorinated ethenes. Using this information, a draft groundwater cleanup plan was also developed.

FY14 Actions:
Work involved continued operation and maintenance of the SVE-only remediation systems, with a 190-day shut-down, vapor intrusion evaluation at the site and at neighboring buildings, groundwater monitoring, and pore water sampling to understand fate and transport of contaminant discharge into the Chena River. Operation of the remedial system has resulted in a dramatic decrease in chlorinated solvent concentrations in all environmental media, but particularly sub-slab soil gas. However, the extended shutdown tests have revealed that solvent contamination in soil gas rebounds after system shutdown, and continued operation is necessary. The Groundwater Cleanup Plan was finalized, but has not been implemented.

FY15 and FY16 Projected Actions:

Site Cleanup under 18 AAC 75.360
In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360

Project/Site Name: **84th Avenue and Spruce Street**
Location: Anchorage
Project Manager: Eileen Olson
Hazard ID Number: 1222
Ledger Code: 14936660
Primary RP: Municipality of Anchorage (MOA)

Site Management Category: RP Lead
Site type: Salvage/Recycling/Wrecking Yard

Situation:
Soil contamination by lead, polychlorinated biphenyls (PCBs) and trichloroethylene (TCE) was associated with a salvage yard that operated from the late 1940s through 1989. In 1989 contamination was identified at the site during preliminary site work by a prospective developer. The U.S. Environmental Protection Agency (EPA) became involved and conducted a removal action under the EPA Superfund Emergency Response Program, setting site specific cleanup levels of 10 mg/kg PCB, 500 mg/kg total lead, and 5 mg/L lead by the Toxic Characteristic Leaching Procedure (TCLP). The site includes parts of the rights-of-way of the adjacent streets, 84th Avenue and Spruce Street. The MOA acquired the 10-acre property that included the two-acre site by tax foreclosure. ADEC became responsible for oversight after settlement between EPA, ADEC and various responsible parties in May 1997. The MOA capped the contaminated soil with clean fill as required by EPA and made half of the property that included the site into a municipality park. During street upgrades from 2006-2009 in the adjacent rights-of-way, additional contaminated soil was encountered and excavated, with some soil transported out of state as hazardous waste and soil with non-hazardous levels of contamination used as the core of a sledding hill within the site. The hill was covered by a liner and capped with clean fill.

FY13 Actions:
ADEC granted Cleanup Complete – Institutional Controls status in a decision letter dated May 2, 2014. Institutional controls include periodic visual monitoring and photo-documentation of the site to ensure the integrity of the clean fill cap is maintained, and triennial reporting of the monitoring results.

FY14 Actions:
None.

FY15 and FY16 Projected Actions:
Institutional Controls Maintenance under 18 AAC 75.375.

Project/Site Name: **ADOT&PF Aniak Maint. Shop Former ASTs**
Location: Aniak
Hazard/Site ID Number: 1863
Project Manager: Grant Lidren
Ledger Code: 14963860
Primary RP: ADOT&PF - Anchorage

Site Management Category: CIP Lead
Site type: Airport/Airfield

Situation:
Historic spills and leaks from various sites resulted in soil and groundwater contamination at several state-owned sites at the Aniak Airport including: ADOT&PF Aniak Building 301, ADOT&PF Aniak Maintenance Shop Former ASTs, ADOT&PF Aniak Runway Apron, and MarkAir Aniak Airport. CIP funding was approved to address complete exposure pathways to petroleum contamination by human and ecological receptors in 2011 at these state-owned sites. Project activities conducted in September 2011 consisted of excavating approximately 2,200 cubic yards of petroleum contaminated soil from the three ADOT&PF sites and landfarming the soil on Airport Property, along with 1,100 cubic yards of contaminated soil from the former MarkAir site that was excavated during ADEC Village Safe Water activities in 2010.

FY13 Actions:
In 2013, DEC cross coordinated with the ADOT&PF for use of their equipment for additional land spreading activities.

FY14 Actions:
Further characterization was conducted June 2014. Work included sampling select monitoring and potable wells and performing a site reconnaissance of the land spread areas. Water samples collected from 13 potable wells, including the school wells, were below ADEC groundwater cleanup standards and only four of the wells contained detectable levels of contaminants. Water samples collected from three of 10 monitoring wells contained contaminant concentrations above Table C Groundwater Cleanup levels. One of the monitoring wells at the Maintenance Shop was not sampled due to 4 inches of free product in the well.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335

Project/Site Name:	**ADOT&PF Glennallen Highway Maintenance Camp**		
Location:	Glennallen, AK	Hazard ID Number:	3347
Project Manager:	John B. Carnahan	Ledger Code:	14250380
Primary RP:	ADNR		

Site Management Category: State Owned

Site type: Maintenance Yard/Shop

Situation
The former Glenn Highway maintenance station was built by the Alaska Road Commission as a base of operations while the Glenn Highway was being constructed. At some point between 1941 and 1971, ADOT&PF assumed control of the 160-acre site as property manager.

In 2008, DEC removed buried tanks on the northern portion of the ADOT Maintenance facility. The investigation identified subsurface petroleum impacts and groundwater contamination requiring further delineation. Since the former Maintenance facility had other suspected sources of contamination across the site, in 2009 DEC contracted the completion of a Property Assessment and Cleanup Plan (PACP) to investigate the property history and site activity, and identify all potential source areas. The findings of the 2009 field effort (S&W, March 2010) provided information about specific data gaps and recommended actions for further assessment for approximately 26 source areas across the 160-acre site. To date, site work has identified buried and above ground storage tanks located across the properties, injection wells, a large septic system, and drummed chemical storage.

FY13 Actions:
Scope of work included creation of a work plan, installation and monitoring of groundwater wells, the digging of soil test pits and trenches to identify the contaminant spread, confirmation sampling, and limited source removal with contaminated soil stockpiled on site for disposal/treatment.

FY14 Actions:
Work targeted the completion of field work initiated in FY13, and the subsequent sampling of groundwater monitoring wells. Contractor also completed the sampling of stockpiled soil on the property. Upon completion, all work was documented and a proposal provided

FY15 and FY16 Projected Actions:
Site Characterization under 18 AAC 75.335

Project/Site Name: **ADOTPF Kotzebue Airport Areawide**
Location: Kotzebue Hazard ID Number: 25111
Project Manager: James Fish Ledger Code: 14243780
Primary RP: Alaska Department of Transportation and Public Facilities

Site Management Category: State Owned
Site type: Airport

Situation:
The Contaminated Sites (CS) database has several active sites listed at the Kotzebue Airport. This includes the ADOT&PF Kotzebue Airport Maintenance Station and various airport lease lots where known petroleum and solvent contamination is present. Pore water sampling during 2008 and 2010 near the airport identified petroleum contamination above both groundwater cleanup levels and surface water quality standards entering into both Kotzebue Sound and Lagoon. Monitoring wells were installed during 2010 at the Kotzebue Airport, and pressure transducer were installed in 2012 to help establish baseline groundwater and contaminant migration information prior to developing a clean-up or risk reduction strategy. Additional sediment, pore water, surface water and groundwater sampling has also been conducted to fill hydrogeological site characterization and exposure pathway data gaps, prior to corrective action.

FY13 Actions:
Work in FY13 involved pore water, sediment, surface water and groundwater sampling, with installation of water level data loggers in select monitoring wells, to assess petroleum and solvent contaminant movement. An eco-scoping process was conducted to preliminarily assess contaminant exposure risks to ecological receptors. A well search on airport lease lots and surrounding area was also conducted.

FY14 Actions:
In FY14, information from water level data loggers (pressure transducers) was retrieved and analyzed to determine seasonal groundwater flow direction and magnitude. Groundwater monitoring was also conducted at airport monitoring wells. Plans for additional site characterization involving passive sampling to determine bioavailable contaminant concentrations and exposure to ecological receptors was also developed.

FY15 and FY16 Projected Actions:

Site Characterization under 18 AAC 75.335

Project/Site Name: **ADOTPF Northway Airport Lease Lots Block 8**
Location: Northway Hazard ID Number: 4324
Project Manager: James Fish Ledger Code: 14224380
Primary RP: Alaska Department of Transportation and Public Facilities

Site Management Category: State Owned
Site type: Airport

Situation:
The Alaska Department of Transportation & Public Facility (ADOT&PF) requested assistance from the DEC Reuse and Redevelopment Program to conduct a DEC Brownfield Assessment of multiple airport lease lots. Historical fuel-contaminated soil was discovered during excavation for a leach field. The excavation continued to groundwater where a sheen was observed on the water. The airport well is 125 feet from the discovered contamination.

There is an extensive history associated with the use of this site that includes functioning as a refueling depot for aircraft during World War II, and providing as a staging area for work on the Alaskan Highway, the Canadian Oil (CANOL) pipeline project, and a defense fuel pipeline. Environmental concerns are present at many of the lease lots. These lots all border the main road in Northway and are open to wildlife, residents, and children. In addition, contamination deters future use of the airport lease lots and hinders redevelopment of lots that have high potential for use and benefit to the community. Some buildings onsite are occupied and vapor intrusion into occupied buildings may pose a risk.

Additional assessment and cleanup work will be required at this facility; however, federal agencies may be engaged at this location to complete some of the assessment or cleanup efforts.

FY13 Actions:
Records research was conducted during FY13 to ascertain historical land ownership, occupancy, and use of each State-owned lease lot, and to identify potential contamination sources at the Northway Airport. This information was used to develop a strategy of engaging PRPs (including FUDS program) and determine future course of action.

FY14 Actions:
No site work was conducted during FY14, but plans were developed to sample drinking water wells within the airport vicinity to assess the greatest contaminant exposure risk.

FY15 and FY16 Projected Actions:

Site Characterization under 18 AAC 75.335

Project/Site Name:	**ADOT&PF Old Quinhagak Airport**		
Location:	Quinhagak, AK	Hazard ID Number:	25348
Project Manager:	John B. Carnahan	Ledger Code:	14218580
Primary RP:	ADOT&PF		

Site Management Category: State Owned

Site type: Airport/Airfield

Situation
The Alaska Department of Transportation & Public Facilities (DOT) leased property from the Quanirtuuq, Inc., the local village corporation, for the construction and management of the Quinhagak Airport. The airport was forced to relocate due to erosion of the runway by the Kanektok River, but DOT did not vacate the lease at that time. DOT subsequently contracted an environmental assessment of the site in 2005-06 that confirmed the presence of petroleum contamination in soil and groundwater at the former airport site. Heavy equipment, aboveground storage tanks, drums, and fueling of vehicles, aircrafts, and boats were potential sources of the contamination.

The site was referred to the DEC's Reuse and Redevelopment (R&R) Program for cleanup assistance in 2009, since the site was pending transfer to the Native Village of Kwinhagak (Quinhagak) and DOT required the site remediated sufficiently to enable beneficial reuse by the village, before DOT's could terminate their lease. DOT had not been successful in retaining necessary state funding to complete the limited necessary cleanup to enable the transfer. The R&R Program coordinated the successful cleanup in coordination with DOT and Quanirtuuq involvement throughout.

In 2012 the DEC issued a Cleanup Complete Determination which was subsequently contested by the Corporation and its attorneys due to issues outside the original scope of services; however, the closure decision was held up through the Administrative hearing process which concluded April 10, 2013, and was adopted by the Commissioner of DEC.

FY13 Actions:
Actions were limited to responding to questions and inquiries on the site status, preparing documents, completing file management and reconciling closure requirements.

FY14 Actions:
None

FY15 and FY16 Projected Actions:
None

Project/Site Name: **ADOTPF Peger Road Maintenance Station**
Location: Fairbanks Hazard ID Number: 1402
Project Manager: James Fish Ledger Code: 14800780
Primary RP: Alaska Department of Transportation and Public Facilities

Site Management Category: State Owned
Site type: Maintenance Yard/Shop

Situation:
The Alaska Department of Transportation and Public Facilities Northern Region Operations and Maintenance facility is located on Peger Road in Fairbanks. Environmental investigations began in the early 1990s, and are the result of compliance with Underground Storage Tank (UST) regulations and a federal Resource Conservation and Recovery Act (RCRA) compliance audit. Soil and groundwater within the facility are contaminated with chlorinated solvents, including trichloroethane (TCA) and trichloroethylene (TCE) and their breakdown products, as well as gasoline and diesel fuels. TCE and benzene concentrations above cleanup levels in the groundwater extend offsite into residential neighborhoods. Underground storage tanks were removed and/or closed, and partial soil excavations occurred during the mid-1990s. In 2004, about 700 cubic yards of TCE contaminated soil was excavated and land spread as an interim corrective action on adjacent municipal property, prior to thermal remediation. Additional sources of TCE in soil and groundwater have been found by ADOT as recently as 2012 and continue to be investigated by DEC. Residential drinking water wells located down gradient continue to be sampled. Vapor intrusion into buildings has also been identified as a complete exposure pathway. Sub-slab depressurization systems - both at the Maintenance and Operations (M&O) building and at the Materials Laboratory building - were installed by ADOT in 2004.

FY13 Actions:
As part of a five-year monitoring program schedule, sampling a portion set of 68 groundwater monitoring wells, and an assessment of the movement and status of the plume, was conducted. SVE remediation systems were sampled and evaluated at the Materials Laboratory and at the Maintenance & Operations Building. Long-term monitoring of private use water wells was also conducted, and newly discovered sources of TCE-contaminated soils near the eastern property boundary were investigated. Results indicate newly-discovered contamination extends off-site.

FY14 Actions:
Additional private water well monitoring was conducted during FY14, and plans were developed to investigate vapor intrusion exposure risks into off-site residential buildings during FY15.

FY15 and FY16 Projected Actions:

Site Characterization under 18 AAC 75.335

Project/Site Name: **ADOT&PF Tudor Road Maintenance Facility**
Location: Anchorage
Hazard ID Number: 926
Project Manager: Bill O'Connell
Ledger Code: 14978980
Primary RP: ADOT&PF

Site Management Category: State Owned
Site type: Maintenance Yard/Shop

Situation:
Several sources including underground fuel storage tanks, fuel dispensers, and a disposal pit for spent solvents resulted in soil and groundwater contamination at this site.

FY13 Actions:
Work consisted of groundwater monitoring and an evaluation of the potential vapor intrusion risk at the Materials Lab

FY14 Actions:
Work involved the design and installation of a sub-slab depressurization system intended to remove solvent vapors from below the concrete slab at the materials lab.

FY15 and FY16 Projected Actions:

- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name: **ADOT&PF Willow Maintenance Station**
Location: Willow
Hazard ID Number: 1809
Project Manager: Dooley
Ledger Code: 14229280
Primary RP: ADOT&PF

Site Management Category: State Owned
Site type: Maintenance Facility

Situation:
Numerous sources were present at this site including underground fuel storage tanks, heating oil tanks, and a drywell. Contaminated soil was excavated from the various source areas and treated on site via landfarming beginning in 2009. Groundwater monitoring was conducted on several occasions. After the soil had cleaned up to acceptable levels and groundwater contamination had decreased, the site was closed in FY 13.

FY13 Actions:
Monitoring well decommissioning, project closeout and site closure.

FY14 Actions:
None

FY15 and FY16 Projected Actions:

- None

Project/Site Name: **AFSC Anchorage International Airport**
Location: Anchorage
Project Manager: Meghan Dooley
Hazard ID Number: Multiple
Ledger Code: 14697670
Primary RP: Aircraft Service International Group

Site Management Category: RP-Lead
Site type: Airport/Airfield

Situation:
This project is composed of multiple sites that belong to the Aircraft Service International Group. They are responsible for tank farms and pipelines that service the various fuel dispenser points at the Anchorage International Airport. Leaks and spills related to these activities are documented at several locations at the airport. Ongoing free-product recovery, groundwater monitoring, and contaminated soil removal occurs at the airport regularly. The sites associated with this LC are as follows: AFST – Former Plant #4, AFSC Concourse A Fuel Pipeline, AFSC Former Bulk Fuel Tank Farm, AFSC Former Fuel Vault, AIA North Terminal, AIA North Terminal Gate N2 and AFSC Kilo Gates Hydrant System.

FY13 Actions:
During FY13, ADEC oversaw groundwater sampling and free product recovery at AFSC Former Bulk Fuel Tank Farm, AIA North Terminal, AIA North Terminal Gate N2, and additional sampling at the Kilo Gates to characterize contamination and determine risk. ADEC received a sampling report for the AIA Landspreading Area, managed by both AFSC and ADOT&PF.

FY14 Actions:
During FY14, ADEC closed the Concourse A site. ADEC oversaw groundwater sampling and free product Recovery at AFSC Former Bulk Fuel Tank Farm, AIA North Terminal and AIA North Terminal Gate N2, and vapor intrusion mitigation measures for the Kilo Gates site. ADEC received a sampling report for the AIA Landspreading Area, managed by both AFSC and ADOT&PF.

FY15 and FY16 Projected Actions:
- Institutional Controls Maintenance under 18 AAC 75.375
- Site Characterization under 18 AAC 75.355
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Final Reporting under 18 AAC 75.375

Project/Site Name: **AIA Airport-Wide Drainage System**
Location: Anchorage
Project Manager: Blessing
Primary RP: ADOT&PF

Hazard ID Number: 2562
Ledger Code: 14155380

Site Management Category: RP Lead
Site type: Airport

Situation:
This site is unconfirmed releases of many petroleum like compounds around the Anchorage International Airport. There was ongoing monitoring on an annual basis but no contamination has been known to be migrating off-site. This LC is no longer in use.

FY13 Actions:
State lead, none.

FY14 Actions:
State lead, none.

FY15 and FY16 Projected Actions:
State lead, none.

Project/Site Name: **AIA Long Term Parking**
Location: Anchorage
Project Manager: Meghan Dooley
Primary RP: ADOT&PF

Hazard ID Number: 3745
Ledger Code: 14155780

Site Management Category: State Owned
Site type: Airport/Airfield

Situation:
DRO contaminated soil was encountered during the construction of a storm drain. ADEC requested that the nature and extent of contamination in the soil be investigated.

FY13 Actions:
A sampling and analysis plan was submitted to characterize the site. Soil samples were non-detect for GRO, DRO, RRO, and BTEX. Groundwater was not encountered. The site was closed in May 2013.

FY14 Actions:
None

FY15 and FY16 Projected Actions:

Project/Site Name: **Alaska Gastineau Mine Tailings**
Location: Juneau
Project Manager: Schlichting
Primary RP: AJT Mining Properties, Inc.

Hazard ID Number: 404
Ledger Code: 14147760

Site Management Category: RP Lead
Site type: Mining Operation

Situation:
The Gastineau Mine Tailings site is located four miles southeast of Juneau on Thane Road. The former disposal site received tailings from mill sites operating in the Sheep Creek watershed from 1912 to 1920. The tailings disposal area encompasses about 50 acres of fine sediments deposited near and at the mouth of Sheep Creek where it empties into Gastineau Channel. Sampling conducted in 1987 by Echo Bay Mines found elevated levels of arsenic and lead in the tailings. The data prompted the US EPA to seek a comprehensive investigation of the area. Mercury in the tailings was also suspected due to the use of mercury amalgamation in the area in the past. EPA added the site to CERCLIS, and ADEC added the site to its database in 1987.

FY13 Actions:
In March 2013, the property owner contracted environmental services to carry out an investigation to assess current conditions at the site. In addition, ADEC joined the property owner's consultant in conducting sampling in the tailings area of shellfish and other biota for heavy metals.

FY14 Actions:
In July of 2013, the property owner submitted a site characterization report. In November 2013, an addendum to the report was submitted detailing the results of tissue sampling. In April 2014, ADEC released its own results of tissue sampling. Based on a review of all the data, ADEC found no significant exposure risk to be present to human health or aquatic life from arsenic, lead, or mercury. A cleanup complete determination was issued in June of 2014.

FY15 and FY16 Projected Actions:
None. The site is closed.

Project/Site Name:	**Alaska Gold Company New Gold House**		
Location:	Nome	Hazard ID Number:	295
Project Manager:	Robert Burgess	Ledger Code:	14213960
Primary RP:	NovaGold Resources, Inc.		

Site Management Category: PRP

Site type: Mining Operation

Situation:
Gold ore processing activities in the 1970s resulted in releases of mercury and concentrated arsenic from processed tailings to a pad and wetlands area adjacent to an anadramous stream, Dry Creek, on the north edge of Nome, Alaska. EPA and ADEC investigated the site in the 1980s and 1990s. The New Gold House building and visible liquid mercury in the building footprint were removed from the site in 2004. Additional work delineated the extent of mercury and arsenic contamination in soils. Recent sampling of Dry Creek and a nearby pond found mercury, methylmercury, and arsenic above ecological screening levels in sediments and detections of mercury, methylmercury, and arsenic above ecological screening levels in pond sediments. Arsenic was also detected in surface water above water quality standards. The site is impacted by petroleum contamination, most likely originating from the adjacent upgradient site. NovaGold, the current property owner and RP, has proposed to cap the contaminated soil in place. The department has requested additional evaluation of ecological risk before accepting or rejecting a cleanup method.

FY13 Actions:
Work consisted of sampling groundwater, surface water, and stream sediments. A remedy was proposed and ADEC requested additional information and evaluation of ecological risk. The role of the CS program was reviewing workplans, reports, and other deliverables, visiting the site, and meeting with RP to discuss the site.

FY14 Actions:
Work included additional sampling of groundwater, sediments, and surface water. The RP provided additional details on the proposed cleanup techniques and an ecoscoping form was submitted. The role of the CS program was to review deliverables, discuss options, and provide briefings for internal deliberation.

FY15 and FY16 Projected Actions:

- Additional Site Characterization under 18 AAC 75.335
- Screening Level Ecological Risk Assessment under 18 AAC 75.340 (f)
- Site-specific analysis under 18 AAC 75.340 (i)(2)
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **Alaska Gold Power Plant**
Location: Nome Hazard ID Number: 25216
Project Manager: Robert Burgess Ledger Code: 14936460
Primary RP: Alaska Gold Company/Bering Straits Native Corporation

Site Management Category: PRP

Site type: Power Generation/Sub-Station

Situation:
The Alaska Gold Power Plant was built in 1901 and generated power for several dredges and the City of Nome. Most of the tanks were added in 1930, resulting in over two million gallons of fuel storage total. The tank farm and power plant were decommissioned in the late 1980s during negotiations for a compliance order by consent between DEC and Alaska Gold Company (AGC) which followed initial inspections by DEC that resulted in the identification of leaks and weeping from tank fittings. Additionally, EPA found hazardous waste violations under RCRA. Subsequent environmental work discovered soil and groundwater contamination near all but the western-most tanks, which were not investigated. The site was not listed in the CS database until 2008, when DEC staff visiting an adjacent site noticed soil staining, leaking oil tanks, and miscellaneous drums in various locations around the site. At that time, the property was under the ownership of NovaGold Resources, Inc., who sold Alaska Gold Company, including this property, to Bering Straits Native Corporation (BSNC) in 2012. In 2013 BSNC sold a portion of the property to the city of Nome. Investigations from 2008-2014 consisted of sampling and removal of contaminated surface soil as well as soil borings and groundwater sampling downgradient of source areas. Contamination remained at the base of most 2-foot soil excavations. Fresh soil stains were noted in some excavation areas during a site visit in 2013. Currently the City of Nome is developing the site and is completing a targeted brownfield assessment through EPA to further site characterization efforts and evaluate future development potential. Site preparation is underway for a museum and an ice skating rink. The City of Nome plans to complete the museum building in the summer of FY15/FY16.

FY13 Actions:
Work consisted of groundwater sampling as well as sediment and surface water sampling of the nearby Dry Creek, as part of investigations on the adjacent downgradient site, as well as surface soil removal and confirmation sampling at 21 locations throughout the site.

FY14 Actions:
Work included additional groundwater, surface water, and sediment sampling. Discussions with reluctant RPs and determination of the billing party for cost recovery also took place, in addition to working with the City of Nome to apply for a targeted brownfield assessment (TBA) with the EPA. Soil sampling was also conducted opportunistically during geotechnical borings, and a soil management plan for use during excavation and construction activities was reviewed by the department.

FY15 and FY16 Projected Actions:

- Continued site Characterization under 18 AAC 75.335
- Soil cleanup as necessary for site development under 18 AAC 75.360.
- Institutional Controls Development and Maintenance under 18 AAC 75.375

Project/Site Name: **Alaska Real Estate Parking Lot**
Location: Anchorage
Hazard/Site ID Number: 4084
Project Manager: Grant Lidren
Ledger Code: 14144960
Primary RP: Alaskan Real Estate, Inc. (Fourth AVE Gambell, LLC)

Site Management Category: CSP Lead
Site type: Laundry/Dry Cleaner

Situation:
The property is presently operating as a parking lot on Fourth Avenue between Gambell and Hyder streets. The property has been occupied by a variety of businesses, including dry cleaners and a tire center. The contaminant of concern for this site is tetrachloroethylene (PCE). The primary zone of soil contamination falls in an area of approximately 28,000 square feet around the former dry cleaner. The vertical extent of tetrachloroethylene (PCE) contamination is known to extend to at least a depth of 50 feet below ground surface (bgs), but the total extent is unknown. The PCE plume extends northeasterly across 3rd Avenue and down the bluff towards the Alaska Railroad Corporation's Anchorage Terminal Reserve and Ship Creek.

FY13 Actions:
A draft Focus Feasibility Study (FS) report was submitted to ADEC. This Focused FS presented a summary of the historical analytical results for the site, a discussion of the nature and extent of soil and groundwater contamination, and five remedial alternatives for addressing soil and groundwater contamination. The draft report was submitted incomplete and did not include cost estimates for each remedial alternative or the detailed comparison of alternatives.

FY14 Actions:
EPA and ADEC completed field work May 2014. The EPA work consisted of installation of vapor intrusion mitigation systems on the four properties adjacent to the Alaska Real Estate Parking Lot. These systems consist of vapor barriers and extraction lines and wells to provide a preferential pathway for accumulated vapors. After the systems installation, the indoor air was sampled to confirm mitigation of vapors. ADEC will continue to manage the indoor risks at the site based off information contained in the EPA Final Report. ADEC also completed initial FY15 CIP field work at the site during this time. Three new monitoring wells were advanced and a total of 13 monitoring wells were sampled. Additionally, three data logging pressure transducers were deployed in three monitoring wells in the Ship Creek Basin to measure groundwater fluctuation and flow direction variability. This additional information will help aid the drafting of the groundwater focused feasibility study which is scheduled to be completed in 2014.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360

Project/Site Name: **Alaska Refrigerated Services Cold Storage Bldg.**
Location: Anchorage Hazard ID Number: 25967
Project Manager: Eileen Olson Ledger Code: 14317460
Primary RP: Alaska Refrigerated Services Cold Storage Bldg.

Site Management Category: RP Lead
Site type: Commercial/Retail/Office

Situation:
During construction of the cold storage building at the site in 1999, contamination by a diesel release from an aboveground storage tank (AST) used to fuel equipment was discovered. The AST was located close to the foundation wall midway along the side of the building. Soils adjacent to and beneath the building foundation exceeded cleanup levels for diesel range organics (DRO). Very little work was done between 1999 and 2012. Site work was completed by a consultant working on behalf of a prospective buyer in 2013 and 2013, with soil borings, monitoring wells and soil gas probes installed and sampled. Soil vapor exceeded site screening levels but contamination is localized and the building construction is expected to prevent migration of vapor into the building. Groundwater was not impacted and soil contamination by DRO remains above the most stringent 18 AAC 75.341 Method Two migration to groundwater cleanup level in the 'Under 40 Inch' precipitation zone.

FY13 Actions:
ADEC granted Cleanup Complete – Institutional Controls status in a decision letter dated April 15, 2014. Institutional controls include standard language as well as monitoring and maintaining of the slab for cracks and other penetrations, and repairing as necessary to prevent the possibility of vapor intrusion, and submitting a report of the monitoring every five years beginning in 2019.

FY14 Actions: July 2014 – June 2015
None.

FY15 and FY16 Projected Actions:
Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Alyeska Pipeline Wide Contamination**
Location: Alyeska Pipeline Corridor
Project Manager: Grant Lidren
Primary RP: Alyeska Pipeline Service Company

Hazard/Site ID Number: multiple
Ledger Code: 14818360

Site Management Category: RP Lead
Site type: Transmission Pipeline

Situation:
The 800-mile Trans-Alaska Pipeline System (TAPS) starts in Prudhoe Bay and ends at the Valdez Marine Terminal. Three are 12 pump stations along the pipeline corridor. Only four of these pumpstations are still active.

There are currently 24 active contaminated sites along the pipeline corridor. These sites are a result of spills and leaks from pipeline operations including: historic construction camps, above ground storage tanks, fueling stations, pump stations, pipelines, etc.

FY13 Actions:
ADEC had an annual meeting with Alyeska and SLR to discuss contaminated site issues. Work was completed all along the pipeline with the majority of work completed at the Valdez Marine Terminal and Pump Station 1. Work included: groundwater and surface water monitoring, product recovery, soil sampling, soil removal, in-situ remediation, monitoring well decommissioning, and other activities.

FY14 Actions:
ADEC had an annual meeting with Alyeska and SLR to discuss contaminated site issues. Work was completed all along the pipeline with the majority of work completed at the Valdez Marine Terminal and Pump Station 1. Work included: groundwater and surface water monitoring, product recovery, soil sampling, soil removal, in-situ remediation, monitoring well decommissioning, and other activities.

FY15 & FY16 Projected Actions:
- Interim Removal Action under 18 AAC 75.330
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Anchorage Public Wrk**
Location: Anchorage
Project Manager: Meghan Dooley
Hazard ID Number: 4273
Ledger Code: 14215260
Primary RP: Municipality of Anchorage, Denali Lodging, LLC

Site Management Category: RP Lead
Site type: Commercial/Retail/Office

Situation:
Municipality of Anchorage contractors encountered GRO and BTEX contaminated soil during right-of-way work along Gambell Street in 2006. A Phase II ESA was completed in 2008 and five soil borings were completed as monitoring wells. Groundwater sampling results showed exceedances of GRO, DRO, RRO and BTEX. Benzene was detected above cleanup levels in soil. Contaminated soil was removed during the construction activities and a site characterization report was submitted showing exceedances in soil, soil gas and groundwater. PRP letters were issued to MOA and Denali Lodging, LLC. The source is unknown but likely due to historical activity.

FY13 Actions:
Groundwater and soil gas samples were collected from existing sampling locations. Exceedances of GRO, DRO, benzene, and toluene were detected in groundwater. Soil gas sample results showed target level exceedances of VOCs.

FY14 Actions:
Soil gas samples were collected at 2 sampling locations and a report was received by ADEC.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Aniak White Alice Communication Site (WACS) - PCBs**
Location: Aniak Hazard ID Number: 692
Project Manager: John Halverson Ledger Code: 14812960
Primary RP: U.S. Government (Air Force), AT&T, Lockheed Martin, Exelis, State of Alaska

Site Management Category: CSP Lead (switched back to RP lead)
Site type: Military Installation – Radio Relay Station (Former)

Situation:
This former Cold War communications facility was constructed and operated by contractors for the Air Force. The land was conveyed to the State of Alaska under the Statehood Act, but the WACS operations continued through the 1970s. The buildings were subsequently conveyed to the Kuspuk School District, which renovated the main building and converted it into a school. During Air Force operations and the School District renovations, polychlorinated biphenyls (PCB) containing oils were spilled or disposed of on the site. Starting in 1979, several limited cleanup actions occurred. However, the cleanup was never completed and cleanup work on the site stalled for many years due to debates over liabilities and cost allocation. In 2001, since the responsible parties had failed to complete the PCB cleanup at the school, DEC initiated State Lead site characterization and cleanup. Several phases of characterization and cleanup were completed through 2013.

FY13 Actions:
During FY13, DEC informed the responsible parties that they needed to fund and conduct all the remaining cleanup, monitoring and site management activities. DEC worked closely with the Department of Law (DOL) during FY13 and focused on negotiations with the responsible parties toward developing a settlement agreement defining how the site will be cleaned up and managed including cost allocations for conducting the remaining cleanup work and reimbursing the State for all past cleanup and oversight expenditures.

FY14 Actions:
DEC and DOL continued meetings, negotiations and mediation with the responsible parties to resolve liability and cost allocation issues. Initiated drafting a consent decree. Worked with the responsible parties on seeking funding for future cleanup planned during 2015.

FY15 and FY16 Projected Actions:
- Settlement Agreement / Compliance Agreement
- Reimbursement of prior State Lead and oversight expenses
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **Aniak White Alice Communication Site (WACS) - TCE**
Location: Aniak Hazard ID Number: 692
Project Manager: John Halverson Ledger Code: 14812961
Primary RPs: U.S. Government (Air Force), AT&T, Lockheed Martin, Exelis, State of Alaska

Site Management Category: CSP Lead (switched back to RP lead)
Site type: Military Installation – Radio Relay Station (Former)

Situation:
This former Cold War communications facility was constructed and operated by contractors for the Air Force. The land was conveyed to the State of Alaska under the Statehood Act, but the WACS operations continued through the 1970s. The buildings were subsequently conveyed to the Kuspuk School District, which renovated the main building and converted it into a school. During Air Force operations and the School District renovations, polychlorinated biphenyl (PCB) containing oils were spilled or disposed of on the site. Starting in 1979, several limited cleanup actions occurred. However, the cleanup was never completed and cleanup work stalled for many years due to debates over liabilities and cost allocation. In 2001, because the responsible parties had failed to complete the PCB cleanup at the school, DEC initiated State Lead site characterization and cleanup. Several phases of characterization and cleanup were completed through 2013.

During the State Lead work, trichloroethylene (TCE) contaminated soil and groundwater were discovered. High concentrations of TCE vapors were found beneath the school and indoor air TCE levels were above health based screening levels. During FY11-12, DEC contractors installed and operated a vapor intrusion mitigation system at the site to stop TCE vapors in the soil from moving up into the building.

Oversight and response action costs associated with the PCB and TCE contamination were broken out separately to facilitate settlement negotiations and State cost recovery.

FY13 Actions:
DEC informed the responsible parties that they needed to fund and conduct all the remaining cleanup, monitoring and site management activities. DEC funded continued operation of the vapor intrusion mitigation system through December 2012, to allow the responsible parties to secure funding and negotiate a contract to take over operations, maintenance and monitoring. DEC worked closely with the Department of Law (DOL) during FY13 and focused on negotiations with the responsible parties toward developing a settlement agreement defining the how the site will be cleaned up and managed including cost allocations for conducting the remaining cleanup work and reimbursing the State for all past cleanup and oversight expenditures.

FY14 Actions:
DEC and DOL continued meetings, negotiations and mediation with the responsible parties to resolve liability and cost allocation issues. Initiated drafting a consent decree. Worked with the responsible parties on seeking funding for future cleanup planned during 2015.

FY15 and FY16 Projected Actions:
- Settlement Agreement / Compliance Agreement
- Reimbursement of prior State Lead and oversight expenses
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **ANTHC Tract J Block 5 Tudor Centre**
Location: Anchorage
Project Manager: Meghan Dooley
Primary RP: Alaska Native Tribal Health Consortium

Hazard ID Number: 25531
Ledger Code: 14300660

Site Management Category: RP Lead
Site type: Hospital/Clinic

Situation:
A site assessment in 2003 discovered soil and groundwater contaminated with diesel range organics exceeding cleanup levels. Three borings were completed as monitoring wells during an additional site characterization effort. A PRP letter was sent to the ANTHC in 2010. An Environmental Management Plan was created and approved for the construction of the Healthy Communities Building located on Tract J. A groundwater monitoring plan was drafted and approved in 2012, and groundwater monitoring is ongoing.

FY13 Actions:
Work consisted of groundwater monitoring at several wells located on the site to determine contaminant concentrations and groundwater flow.

FY14 Actions:
Work consisted of groundwater monitoring at several wells located on site to determine the status of the contaminant plume.

FY15 and FY16 Projected Actions:

- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Arness Septage**
Location: Nikiski
Project Manager: Campbell
Primary RP: Peggy\Joe Arness

Hazard ID Number: 176
Ledger Code: 14970960

Site Management Category: RP Lead
Site type: Septage disposal/industrial waste

Situation:

Fifty-six drums of Drag Reducing Agent (DRA) and DRA-contaminated soil. In addition, two underground sewer systems that were used to dispose non-domestic wastewaters and oil were excavated and the polluted soils spread on the land surface on site. The quantity of oily sludge contaminated soils that were spread on the property was substantial, and the treatment process for these soils was never properly monitored. Two groundwater monitoring wells have been installed and groundwater was encountered approximately 125 feet below ground surface. The groundwater is contaminated with 10-20 micrograms per liter (ug/L) 1,1,1-Trichloroethane. The magnitude and extent of groundwater contamination has not been defined, even though it has migrated across property boundaries.

FY13 Actions:

A second monitoring well was installed at the site. The wells were sampled.

FY14 Actions:

The Kenai Peninsula Borough has let a contract to conduct an area wide groundwater investigation. The first phase is to gather existing groundwater quality and elevation data.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335

Project/Site Name: **ARRC Statewide**
Location: Statewide
Project Manager: Grant Lidren
Primary RP: Alaska Railroad Corporation (ARRC)

Hazard/Site ID Number: multiple
Ledger Code: 14224260

Site Management Category: RP Lead
Site type: Railroad Operation

Situation:
As a result of railroad operations, contaminated sites have been identified along the rail line from Seward to Fairbanks. This LC has been used for multiple sites where the Alaska Railroad Corporation (ARRC) is the owner or operator of the contaminated site.

FY13 Actions:
ADEC had an annual meeting with the ARRC and their environmental consultant to discuss contaminated site issues and set priorities. Work was completed along the rail line at select sites. Work included: groundwater monitoring, soil gas sampling, soil sampling, and other remediation activities.

FY14 Actions:
ADEC had an annual meeting with the ARRC to discuss contaminated site issues and set priorities. Work was completed along the rail line at select sites that had been previously prioritized. Work included: groundwater monitoring, soil gas sampling, soil sampling, and other remediation activities.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **AT&T Alascom Duncan Canal Repeater**
Location: Petersburg
Hazard ID Number: 3281
Project Manager: Bruce Wanstall
Ledger Code: 14936060
Primary RP: AT&T Alascom

Site Management Category: RP Lead
Site type: Telecommunications

Situation:
The 2009 Site Investigation of a 2007 diesel release from a leaking generator aboveground storage tank (AST) fuel line suggested 200 gallons were missing but closer examination of AT&T fuel invoices indicate that consumption of diesel supplies in 2007 are 2,000 gallons above the 2006 diesel supplies. Source Area ID# 78853 is attributed with fuel impacts to surface drainages extending beyond 1,000 feet linear distance down slope from the facility with oil sheen on soil and surface water exposed by defoliating grassland and small trees. Variability in the depth of contamination suggest that the leakage occurred in part during the predominant frozen ground conditions at the 2,500 foot elevation location on west Kupreanof Island.

FY13 Actions:
In 2011 DEC approved a work plan to treat contaminated soil in-situ by roto-tilling and applying Regenox to assist in breakdown of the hydrocarbons with measures necessary taken to prevent oxidized runoff from traveling offsite and from stressing or impacting vegetation. AT&T consultants performed the soil treatment in 2011 and 2012 but extensive sampling indicated at least half the areas treated did not respond to treatment and remained contaminated above maximum soil contamination levels.

FY14 Actions:
In fall 2013 AT&T consultants excavated an estimated volume of fifty cubic yards of contaminated soil from the site and with DEC approval transported the soil off-site to a remediation facility. The Interim Removal Action confirmation sampling report confirmed success in capturing all remaining contaminated soil on the United States Forest Service lease property to the maximum depth feasible (bedrock). In several locations, oil from the 2007 AT&T spill migrated off-site in surface water drainages to co-mingle with contamination attributable to United States Air Force debris disposal sites managed under the Duncan Canal White Alice contaminated site (Hazard ID #26). A federal restoration site removal action at the debris disposal sites is currently underway. A future contaminated soil cleanup by AT&T on the off-site properties will be determined from confirmation sampling results that will follow the current interim removal site activity.

FY15 and FY16 Projected Actions:

- Interim Removal Action under 18 AAC 75.330
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380
- Settlement Agreement / Compliance Agreement Negotiation

Project/Site Name: **AT&T Alascom Pedro Dome Repeater Site**
Location: Fairbanks
Hazard ID Number: 4302
Project Manager: James Fish
Ledger Code: 14220160
Primary RP: AT&T Alaska & Iberdrola Renewables, Inc.

Site Management Category: RP-Lead
Site type: Telecommunications

Situation:
The site is located on a domed hilltop approximately 18 miles north of Fairbanks, Alaska. The site was acquired by the U.S. Air Force (USAF) from the U.S. Department of the Interior in 1958. The USAF constructed a "White Alice" communications facility at the site during 1958-59, and was incorporated into the Ballistic Missile Early Warning System (BMEWS) in the mid-1960s. In 1984, the USAF sold the site to RCA/Alascom. Eventually, Alascom was acquired by AT&T in the mid-1990s. An escrow fund (called Iberdrola Holdings) was established during a lawsuit between AT&T and PacifiCorp to finance the cleanup of communication-related contaminated sites (including Pedro Dome) across Alaska.

A portion of the Pedro Dome Repeater Site was previously classified as a Formerly Used Defense Site (FUDS), and cleanup of PCB-contaminated soils was conducted by the U.S. Army Corps of Engineers (USACOE). Additional locations at the repeater site were classified as having had beneficial reuse, and at the time were not considered FUDS locations. Site investigations and remediation activities have subsequently occurred at these locations from 1987 to 2008 by the private RPs. Discoveries of PCBs at other similar White Alice sites across Alaska prompted ADEC to request further investigation of the potential presence of PCBs at Pedro Dome. ADEC also discovered a reported spill of PCB transformer oil and subsequent partial cleanup which occurred in 1981. This information was apparently not known previous contractors who conducted prior site investigations, including Phase 1 and Phase 2 environmental site assessments during 1995 and 1997. Subsequent investigations beginning in 2010 have confirmed the presence of extensive PCB contamination in soils around the former equipment and dormitory buildings and at a former septic tank discharge location. Additionally, lead contaminated soil was found in association with discarded lead-acid batteries. Because of these recent findings, the USACOE established a new Potentially Responsible Party (PRP)/Hazardous Toxic and Radiological Waste (HTRW) project for Pedro Dome Radio Relay Station Formerly Used Defense Site, in 2011.

FY13 Actions:
During FY13, the RP contractor conducted additional delineation of PCB contamination in soils and soil sampling at additional areas of interest.

FY14 Actions:
During FY14, ADEC engaged additional PRPs for the site (including FUDS Program & previous military contractors) and facilitated a meeting and site visit with PRPs, attorneys, and the Alaska Department of Law. Additional site assessment and in-situ lead stabilization occurred at the site. A cleanup is planned, pending of resolution of PRP liability.

FY15 and FY16 Projected Actions:
Site Characterization under 18 AAC 75.335
Site Cleanup under 18 AAC 75.360
Settlement Agreement / Compliance Agreement Negotiation

Project/Site Name: **AT&T Alascom Sites**
Location: Soldotna and Unalaska

Hazard ID Numbers: 1004 and 2815

Project Manager: Paul Horwath
Primary RP: AT&T Alascom

Ledger Code: 14150160

Site Management Category: RP Lead
Site type: Tank, Heating – Aboveground, and Underground Fuel Piping

Situation:
There are two (2) active AT&T Alascom sites included under this ledger code. Both sites house communication related facilities and equipment. One site is located in Soldotna (Hazard ID 1004), and the second is located in Unalaska (Hazard ID 2815).

Diesel fuel from aboveground and underground fuel storage tanks is the contaminant of concern in soil and groundwater at the Soldotna facility. Soil and groundwater contamination exceeding ADEC soil and groundwater cleanup levels remains, although the contaminant plumes appear to be stable at this time and the contamination appears to be contained within the property boundaries.

Gasoline, diesel fuel, and lubricating oil from historical fuel storage systems and former drum storage practices are believed to be the cause of soil and groundwater contamination at the Unalaska facility. Contaminated soil has been excavated and actively treated in a lined treatment cell onsite. Contamination likely extends off the property, but the contaminant plume is believed to be stable at this time. No impacts have been observed in the adjacent saltwater bay.

FY13 Actions:
Work consisted of operation of an in-situ soil cleanup system, and continued long term groundwater quality monitoring at the Soldotna facility.

A groundwater sampling and analysis event was completed at the Unalaska facility.

FY14 Actions:
Work consisted of operation of an in-situ soil vapor extraction system, additional groundwater plume assessment work, and long term groundwater quality monitoring at the Soldotna facility.

A soil treatment cell was decommissioned and the soils landspread onsite at the Unalaska facility. A groundwater sampling and analysis event was completed. Additional site assessment was performed adjacent to a former heating oil tank to investigate a potential source for the residual groundwater contamination, however no additional soil impacts were detected.

FY15 and FY16 Projected Actions:
- Site Cleanup under 18 AAC 75.360
- In-Situ Treatment System Maintenance, Operation, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater Monitoring under 18 AAC 75.345

Project/Site Name: **Baker Oil Tools 51950 Delores Drive**
Location: Nikiski
Project Manager: Campbell
Primary RP: Baker Oil Tools

Hazard ID Number: 25935
Ledger Code: 14329660

Site Management Category: RP Lead
Site type: Oil Field Services Company

Situation:
Baker Oil Tools has a shop in Nikiski that is adjacent to the Community water supply wells. After TCE was discovered in the Baker water well, DEC requested that assessment work be conducted. Three wells and three soil borings were drilled on site. Low level chlorinated solvents were detected in each of the groundwater interface samples. Low level solvents were also detected in two samples collected from 15 feet below ground level. It does not appear that this contamination is a threat to the community water supply, or to the nearby Middle/High School water wells. Investigation work is ongoing.

FY13 Actions:
PRP Letter, request for work plan, work plan review.

FY14 Actions:
Review and comment on assessment work. Residential water well survey.
FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name: **Bear Creek Apartments HOT**
Location: Douglas
Project Manager: Bruce Wanstall
Primary RP: Erik L. Emert

Hazard ID Number: 4294
Ledger Code: 14972360

Site Management Category: RP Lead
Site type: Residence

Situation:
In December 2001 petroleum sheen was observed in Bear Creek entering Gastineau Channel from Douglas Island. DEC investigation traced the sheen to the base of a yard at the Bear Creek Apartments on 2nd Street in Douglas. The oil discharge source was a partially buried fuel tank at the south side of the apartment building. A month-long effort to recover oil in winter ice and snow conditions using sorbent materials at surface drainage areas and ponds in the creek eventually stabilized the site. Subsurface vented piping was later added at the west side of the building where soil nutrients were added to promote natural breakdown of trapped oil by microbes. Site Assessment sampling and laboratory analysis of soil between the building and the creek in 2002 and 2003 indicated that the remedial treatment method has had limited effectiveness and a substantial level of petroleum contamination remained at the site.

FY13 Actions:
Between 2007 and 2013 DEC made numerous requests by letter and telephone to Mr. Emert that he make arrangements to have a site assessment performed to determine present conditions in the spill zone between the apartment building fuel storage tank and Bear Creek.

FY14 Actions:
By letter dated April 4, 2014, DEC approved a letter report submitted on behalf of Mr. Emert to DEC by a consultant documenting the results of collecting two soil samples on the property for laboratory analysis. Results were above soil cleanup levels. DEC requested additional sampling for site characterization using an expanded list of chemicals for analysis that would comply with DEC requirements for site closure.

On May 1, 2014, DEC recorded a Notice of Contamination regarding Lot 2 Block 15 Douglas Townsite, as having been subject to a discharge or release and subsequent cleanup of oil or other hazardous substances and further site investigation into the extent of soil, groundwater and surface water contamination and periodic monitoring are necessary to assess risk from complete exposure pathways.

DEC approved a Site Assessment Plan (SAP) submitted in June, 2014, by an environmental consultant on behalf of Mr. Emert.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Beluga River Field**
Location: Beluga, Western Cook Inlet
Hazard ID Number: 990, 995, 656, 989, 999, 1000, 991

Project Manager: Campbell
Ledger Code: 14975560
Primary RP: Conoco Phillips

Site Management Category: RP Lead
Site type: Oil and Gas Field

Situation:

There are seven active sites in the Beluga River Field, and there has been little environmental activity over the past ten years. The sites were identified and worked in the early 1990's. We met with Conoco's environmental professional in 2012, and were able to close two sites, but the majority of the sites are languishing and in a status of "will assess at end of field life". I am asking for additional groundwater monitoring.

FY13 Actions:
Met with RP representative to discuss site status of multiple sites. Closed two sites.

FY14 Actions:
No significant action.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name: **Bentley Tax Lot 201**
Location: Fairbanks
Project Manager: James Fish
Primary RP: Alyeska Pipeline Service Company

Hazard ID Number: 3685
Ledger Code: 14893260

Site Management Category: RP Lead
Site type: Maintenance Yard/Shop

Situation:
This site was leased from the Bentley Family Charitable Trust by Alyeska Pipeline Service Company during construction of the TransAlaska Oil Pipeline System (TAPS), and used by Alyeska as a staging area and construction and storage yard for pipeline sections and equipment. Facilities onsite were used to coat sections of pipeline. The construction and storage yard was later abandoned in the early 1980s. Former facilities on the eastern portion of Tax Lot 201 included a Surfcote building, a POL facility, and a repair Shop. Petroleum contamination was associated with POL Facility piping and operations, and with a 1,000-gallon home heating oil tank and 10,000-gallon UST of the former Surfcote facility. Chlorinated volatile organic compounds (VOCs) were detected in soil and groundwater near a 3000-gallon tank injection well and large septic system injection well associated with the former Surfcote building. Former facilities on the western section of Tax Lot 201 included the Double Jointing and Coating facilities, the Great Western Chemical facility, the Alyeska Salvage yard, and a former Snoopy Repair Shop. A major source of trichloroethene (TCE) was documented in soil at the former Double Jointing and Coating facilities, and caused wide-spread groundwater contamination on the western portion of Tax Lot 201. Groundwater is contaminated with TCE to at least a depth of 30-40 feet below the water table, and extends off-site to the west/southwest, into the Lemeta and Palace Court subdivisions, and likely Noyes Slough. Interim corrective action was initiated in 2003-04 when an air sparge/soil vapor extraction (AS/SVE) system was installed on the western portion of Tax Lot 201. The AS/SVE system treated contamination within vadose zone and the upper portion of the aquifer at the source area (Double Jointing and Coating facilities). The AS/SVE operated until September 2005. Alyeska performed a Human Health and Screening Ecological Risk Assessment in 2005-06 to determine further cleanup actions were not necessary because there were no unacceptable contaminant exposure risks. Alyeska also agreed to long-term groundwater monitoring to support the monitored natural attenuation cleanup approach. ADEC closed the site in January 2007, with Institutional Controls (no groundwater use and no soil transport off-site some newly-platted parcels). Tax Lot 201 has since been sold, subdivided and redeveloped: the section of property containing the former Surfcote facility (northeast section) was purchased by Wal-Mart; the southeast section was purchased by Fred Meyer; the western portion of the lot where the former Double-Jointing Building was located was purchased and redeveloped into Sports Authority. Additional redevelopment and construction is ongoing with the remaining western portion of the former Tax lot.

FY13 Actions:
During this time, the RP conducted long-term groundwater monitoring with ADEC oversight. Road construction activities resulted in discovery of an abandoned septic tank containing petroleum waste.

FY14 Actions:
Long-term groundwater monitoring continued in FY14, but ADEC asked for review of risk assessment assumptions because of new TCE toxicity information and vapor intrusion concerns, particularly off-site.

FY15 and FY16 Projected Actions:

Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name:	**Big Hurrah Gold Mine**		
Location:	7 miles NE of Solomon	Hazard ID Number:	809
Project Manager:	Robert Burgess	Ledger Code:	14619060
Primary RP:	NovaGold Resources, Inc.		

Site Management Category: RP Lead
Site type: Mining Operation

Situation:
A gold mine and stamp mill operated in the early 1900s for less than a decade. Mercury amalgamation was used to process crushed gold ore. In the 1940s and '50s, tailings were re-processed using cyanidation. Preliminary investigations were performed in 1981 following reports of 18 drums of sodium cyanide abandoned at the site. Subsequent investigations in the 1990s revealed PCBs, diesel fuel, and metals in soils at the site and PCBs and metals in sediment samples from Big Hurrah Creek. Investigations and site visits led by ADEC in 2007 and 2008 identified additional areas of concern, including partially full drums of waste oil, a transformer, and fuel stains. Cleanup of waste and debris was conducted in 2008-2010. In 2012, surface stains were sampled and subsequently removed to a depth of 2 feet. During excavation at one location, liquid mercury was discovered. NovaGold and ERM conducted a removal of the mercury without approval from ADEC. Upon receiving the report documenting the unapproved removal, an NOV was issued. Subsequent work delineated the extent of mercury at the location where it was discovered. A file review by ADEC staff elucidated gaps in understanding and data, including sources of mercury, drum storage areas in need of investigation, and detections of mercury from 1993 that are above our current cleanup levels and have not been investigated further. Site is currently owned by Bering Straits Native Corporation and ADEC is working with NovaGold and Bering Straits to continue site investigations.

FY13 Actions:
Work included sampling and removal of petroleum surface stains, discovery and removal of mercury, and composition and review of sampling work plans to delineate extent of mercury.

FY14 Actions (brief narrative):
Work consisted of additional sampling to delineate mercury extent at one location, file reviews and identification of characterization gaps, and discussions with RP regarding additional investigations to fill data gaps.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360

Project/Site Name:	**Big State Logistics Vehicle Rollover - MP 77.8 Glenn Highway**		
Location:	MP 77.8 Glenn Highway; S Side of Road	Hazard ID Number:	25618
Project Manager:	Joshua Barsis	Ledger Code:	14305460
Primary RP:	Big State Logistics		

Site Management Category: RP Lead
Site type: Vehicle

Situation:
In October 2010, a Big State Logistics fuel truck containing 8,800 gallons of #1 low-sulfur diesel fuel ran off the road and collided with a road-side barrier at milepost 77.8 of the Glenn Highway. Fuel was released to the soil adjacent to the highway and 2,460 gallons of fuel were not recovered. During initial remediation activities, approximately 250 cubic yards of petroleum-contaminated soil were excavated and taken to Alaska Soil Recycling for thermal remediation. Diesel range organics (DRO) and benzene, toluene, ethylbenzene, and xylenes (BTEX) remained in soil above ADEC cleanup levels.

FY13 Actions:
Record snowfall during the winter of 2011-2012 led to heavy snowmelt, and the Matanuska River flooded. These factors, combined with low organic content of local soils, allowed most of the remaining contamination to wash from the rocky substrate. Samples collected in October 2012 (two years after the release event) contained a maximum DRO concentration of 494 mg/Kg. Additionally, five surface water samples were collected from the Matanuska River to determine if contaminants had migrated into the river. Neither DRO nor BTEX were detected.

A cleanup complete determination was issued on March 22, 2013.

FY15 and FY16 Projected Actions:
- Final Reporting under 18 AAC75.380

Project/Site Name: **BPXA North Slope Sites**
Location: Prudhoe Bay
Project Manager: Keather McLoone

Hazard/Site ID Number: multiple
Ledger Code: 14237960

Primary RP: BP Exploration (Alaska), Inc

Site Management Category: RP Lead
Site type: Oil Production/Onshore

Situation:
BP is under a RCRA Order with the EPA for sites within the Prudhoe Bay Unit. EPA is the lead regulatory agency for sites that fall under the Order. State regulatory oversight is shared with Solid Waste Program (SWP) for many sites. Wu, Nuechterlein, and McLoone are the current CS staff members that regularly work on BP sites

There are currently 20 active contaminated sites listed on the Contaminated Sites Database. Sites such as Sand Dunes Landfill and Pad 13 are sites that CS has an involvement in but are not listed as active in the CS Database. There are also several conditionally closed sites with active monitoring requirements.

FY13 Actions:
ADEC had several teleconference meetings with BP, BP partners, EPA, and BP consultants to discuss various programmatic and site-specific issues. ADEC also met with BP and BP consultants to discuss topics not specifically related to the RCRA Order. ADEC reviewed several reporting and planning documents. ADEC conducted site visits with ADNR and SWP.

FY14 Actions:
ADEC had many teleconference meetings with BP, BP partners, EPA, and BP consultants to discuss various programmatic and site-specific issues. ADEC also met with BP and BP consultants to discuss topics not specifically related to the RCRA Order. ADEC reviewed several reporting and planning documents.

FY15 & FY16 Projected Actions:
- Interim Removal Action under 18 AAC 75.330
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name:	**Camp Lonely Landfill**	
Location:	North Slope – near Point Lonely	Hazard ID Number: 4113
Project Manager:	Melody Debenham	Ledger Code: 14136560
Primary RP:	Administrative Agreement by Consent between multiple PRPs	

Site Management Category: PRP

Site type: Landfill/Dump

Situation:
The Camp Lonely site is an approximately 15 acre gravel pad situated on the Beaufort Sea between Smith and Harrison Bays in an area that is susceptible to coastal erosion. The nearest communities are Nuiqsut (75 miles southeast) and Barrow (85 miles northwest). Camp Lonely was constructed in 1974 to support drilling operations in the National Petroleum Reserve – Alaska (NPRA) and included living quarters, warehouses, shops, fuel storage, and two landfills. The structures and other facilities were removed from the site in 2005, however the landfills and petroleum contaminated soil was left in place. The Western Landfill was active from 1977 to 1986, and was used by multiple responsible parties. Potentially responsible parties (PRPs) at this site include: the Bureau of Land Management (BLM), the landowner; Cook Inlet Region, Inc., (CIRI), the current lessor; the U.S Geological Survey; the U.S Navy; the U.S. Air Force; Husky Oil Operations Limited; and FELEC Services, Inc.

FY13 Actions:
DEC staff participated in regularly scheduled teleconferences with the PRPs to develop an Administrative Agreement by Consent and supporting documents including site access agreements, the Camp Lonely Site Cleanup Plan, and the cost estimate. The agreement was signed by CIRI, Husky, FELEC, the U.S Department of Justice (representing the federal PRPs), and the State of Alaska. The agreement sets out payment of unpaid recoverable costs DEC incurred for the site through 2012 as well as future recoverable costs associated with site cleanup. The cost estimate for cleanup of the Camp Lonely site is $12,484,040. DEC continued to facilitate coordination between the PRPs and other agencies to obtain the necessary permits and agreements to implement the cleanup plan in FY14.

FY14 Actions:
The Camp Lonely Site Cleanup Plan was successfully implemented and the contents of the landfills were removed and shipped off-site for disposal. Wastes shipped off-site included 214 tons of non-hazardous solid waste, 197 tons of lead, PCB, and chromium contaminated soil, 142 tons of RCRA hazardous lead and chromium contaminated soil, 47 tons of asbestos containing material, and 9 tons of used oil, fuel, glycol, paint, and broken batteries. An estimated 1743 tons of scrap metal has been staged for transportation to a recycling facility in Seattle. Petroleum contaminated soil was removed from the landfills and pad areas and is staged for on-site treatment by landspreading.

FY15 and FY16 Projected Actions:

- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Final Reporting under 18 AAC75.380

Project/Site Name: **Centerpoint Subdivision**
Location: Anchorage
Project Manager: Eileen Olson
Primary RP: Centerpoint I, LLC

Hazard ID Number: 4000
Ledger Code: 14147360

Site Management Category: RP lead
Site type: Residence

Situation:
The site comprised approximately one-quarter of the former Plaza 36 mobile home park that operated from the late 1960s through the early 2000s, when the entire park was closed and redeveloped in phases for commercial use as office buildings. Contamination by petroleum hydrocarbons as heating oil reportedly resulted from releases from a former heating oil distribution and/or storage system. No documentation was provided to ADEC regarding former storage and/or fuel delivery systems for heating the mobile homes during the operation of the park. Contamination as diesel range organics (DRO) was encountered at levels of up to 9,000 mg/kg in soil excavated during buried utility installations in fall 2004. By 2005 approximately 10,000 cubic yards of soil from the site had been transported for remediation by landspreading to a parcel on Trunk Road in Palmer that was owned by the RP's parent company. The landspread soil was successfully treated and closed out. At the mobile home site, monitoring wells installed in 2008 and 2014 did not contain contamination above the most stringent cleanup levels; similarly, soil samples collected under approved work plans did not identify contamination above cleanup levels. ADEC granted cleanup complete status in a letter dated July 1, 2014.

FY13 Actions:
ADEC requested information and a site characterization work plan in a letter dated September 10, 2013. In March 2014 ADEC approved a work plan for completing three borings as groundwater monitoring wells and sampling soil from the borings and groundwater for petroleum hydrocarbons. Review of resulting data showed no contaminants above applicable cleanup levels.

FY14 Actions:
ADEC granted cleanup complete status in a letter dated July 1, 2014.

FY15 and FY16 Projected Actions:
None.

Project/Site Name: **Chalkyitsik School Bulk Fuel Storage**
Location: Chalkyitsik
Project Manager: Grant Lidren
Primary RP: ADOT&PF - Anchorage

Hazard/Site ID Number: 4648
Ledger Code: 14264480

Site Management Category: CIP Lead
Site type: Yukon Flats School District

Situation:
Historic spills and leaks have caused area wide soil and ground water contamination near the Chalkyitsik School Bulk Fuel Storage facility. Soil samples collected in 2002, 2011, and 2012 confirmed contamination at the site above ADEC Method Two Arctic Zone Cleanup levels. Contaminated areas at the site include: the Former Fuel Bladder Storage Area and the School Water Treatment Building Day Tank; the Village Council and School District Tank Farm; the Generator Building; the Northern Teacher's Housing; the Pipeline leak at the Water Treatment Building; and the 2009 diesel pipeline release with associated biocell.

FY13 Actions:
In 2012, clean gravel was capped over contaminated areas to prevent exposure to contaminated soil and wellpoints and surface water samples were collected. Surface water samples were below Water Quality Standards. Only three out of the 11 well points advanced contained groundwater for sampling. Two out of these three wellpoints contained petroleum groundwater contamination above Table C Groundwater Cleanup levels.

FY14 Actions:
No actions in FY14 due to lack of CIP funding.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **Chefornak Former BIA School Tanks**
Location: Chefornak
Project Manager: Grant Lidren
Primary RP: Lower Kuskokwim School District

Hazard/Site ID Number: 3782
Ledger Code: 14263280

Site Management Category: CIP Lead
Site type: Bulk Fuel Storage

Situation:
In 2001, petroleum contamination encountered at the BIA school day tank area and the tank farm area during a site reconnaissance. In 2009, the tanks were removed from the site due the potential of the tanks falling into the river due to erosion. This site is currently being assessed as part of the the DEC Solid Waste Program's Waste Erosion Assessment and Review (WEAR) Project.

FY13 Actions:
Ten hand borings were advanced in the former BIA school day tank area and 20 hand borings were advanced in the former tank farm area to delineate the extent of soil contamination. Hydrocarbon odors were noted in numerous soil samples at both the former tank farm area and the BIA school day tank area. Stained soil was also observed in the vicinity of the former day tank area adjacent to the generator building. Four soil samples collected from this petroleum stained area contained petroleum constituents above method two cleanup levels. Only one of the six soil samples collected outside petroleum stained area at the former BIA School Day tank contained contaminant petroleum constituents above method two arctic zone cleanup levels. Due to the proximity of the generator building, the lateral extent of contamination could not be determined to the south and west. At the former tank farm area, 23 soil samples collected contained petroleum constituents above method two arctic zone cleanup levels. Soil samples collected outside the bermed area were less contaminated then the soil samples collected within the bermed area. The lateral extent of contamination was not defined to the northwest, northeast, and southwest of the former tank farm area. The vertical extent of contamination was not defined at either the day tank area or the former tank farm area due to the presence of permafrost at 2.5 to 3.0 feet below ground surface.

FY14 Actions:
No actions in FY14 due to lack of CIP funding.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **Chevron Dutch Harbor (multiple sites around Rocky Point)**
Location: Dutch Harbor/Unalaska
Hazard ID Number: 509, 510, 512, 514, and 25703
Project Manager: Meredith Savage
Ledger Code: 14801960

Primary RPs: United States, Chevron and Delta Western

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
The military built and operated a bulk fuel tank farm at Rocky Point during World War II. Post-war the government leased the tank farm to Standard Oil. In 1974, the government transferred the property to the Ounalashka Corporation (OC) under the ANCSA. OC continued to lease the facility to Standard Oil and subsequently to Delta Western, which continues to operate the tank farm.

Numerous fuel spills and releases have occurred over the years that the tank farm has been operated, including significant releases from some tanks during the Japanese bombing and strafing of Dutch Harbor in 1943. Since the early 1990's several phases of site characterization and cleanup have been conducted by the Army Corps of Engineers, Chevron and Delta Western. There has also been significant debate and negotiation over responsibilities / liabilities, which has delayed the overall cleanup. Since around 2000, Chevron and Delta Western have taken the lead on environmental work at the sites. Between 2007 and 2010 contractors working for Chevron / Delta Western properly closed over nine miles of abandoned fuel pipelines and removed over 53,000 gallons of product from the lines.

FY13 Actions:
DEC oversight activities entailed reviewing and approving plans and reports on site characterization, groundwater monitoring, operation and maintenance of a groundwater interception trench designed to prevent free product from migrating off-site, free product recovery from a separate area at the lower tank farm, and draft cleanup alternatives analysis report. Several meeting were held to discuss the project status and plans for developing cleanup plans to address the remaining petroleum contamination and out of service fuel tanks.

FY14 Actions:
DEC continued oversight activities included reviewing and approving plans and reports on site characterization, groundwater monitoring, operation and maintenance of a groundwater interception trench designed to prevent free product from migrating off-site, free product recovery from a separate area at the lower tank farm, and a cleanup alternatives analysis report. Several meeting were held to discuss the project status and plans for developing cleanup plans to address the remaining petroleum contamination and out of service fuel tanks

FY15 and FY16 Projected Actions:
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Chignik Norquest Plant South shore of Anchorage Bay**
Location: Chignik Hazard ID Number: 3776
Project Manager: Campbell Ledger Code: 14206660
Primary RP: Norquest Seafoods

Site Management Category: RP Lead
Site type: Fish Processing Plant Community Tank Farm

Situation:

Tank farm upgrade in 2002 led to the discovery of subsurface contamination and remediation by excavation and oxygen release compounds. Several day tanks were also identified as source area. Monitoring wells were installed delineating the extent of contamination. Monitoring wells were removed in 2014 as the site is moving towards closure.

FY13 Actions:

Assessment work and surface water sampling.

FY14 Actions:
Site closure.

FY15 and FY16 Projected Actions:

- Final Reporting under 18 AAC75.380

Project/Site Name: **Chum Creek Subdivision Lot 1**
Location: Coffman Cove, Prince of Wales Island
Project Manager: Danielle Duncan
Primary RPs: Michael Webb and Daniel Jenkins

Hazard ID Number: 25987
Ledger Code: 14319060

Site Management Category: CSP Lead

Site type: Landfill/dump

Situation:
This site was transferred from the PERP program in January 2013 and is located on the corner of Chum Creek Drive and USFS 3030295 Road in Coffman Cove. The site is undeveloped having only a building pad on it. Prior to its incorporation into the City of Coffman Cove, the site was part of a logging camp operated by Ketchikan Pulp Company. The City of Coffman Cove sold the site to Douglas and Elaine Price in August of 1998 before it was sold to Michael Webb and Daniel Jenkins in October of 1998. In the fall of 2011, during an initial site excavation by a prospective buyer (Guy Lane), fifty-five gallon drums of unknown contents were encountered and one was accidentally ruptured and reported to DEC. In addition, there was other debris on site such as car and equipment parts. Interviews with community members indicated that the property had been a well-known unpermitted landfill. In March of 2012, a case was filed (Sangder and Lane v Price, City of Coffman Cove, Webb, and Jenkins) in the Ketchikan Civil Superior Court that was ultimately dismissed. The case was also referred to the Attorney General's Office in March of 2012 for legal advice, the initiation of enforcement proceedings, and recovery of state costs. In May of 2012, R&M Engineering conducted an initial site assessment and found diesel and residual range organics in the soil in addition to the buried drums. In October of 2012, drums and debris that were at the surface were removed and approximately four Super Sacks of contaminated material were removed by Farallon Consulting. There is no record of further cleanup and it is highly likely that there is contamination remaining on site. Unfortunately, the RPs are unwilling to finish cleanup.

FY13 Actions:
During FY13, the site was transferred from the PERP program to CS and an initial ETM ranking was completed.

FY14 Actions:
In December of 2013 PRP letters were sent to the USFS Ketchikan, Elaine Price, Michael Webb, Daniel Jenkins, Ketchikan Pulp Company, and the City of Coffman Cove. An attempt was made to re-zone the property as industrial, however, that was not possible as the City of Coffman Cove has no zoning rules. In lieu of this, a Notice of Environmental Contamination is being filed.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360

Project/Site Name:	**City of Valdez Library**		
Location:	Valdez	Hazard ID Number:	
Project Manager:	Campbell	Ledger Code:	14283460
Primary RP:	City of Valdez		

Site Management Category: RP Lead

Site type: Heating oil tank

Situation:
During the removal of one 1,028-gallon non-regulated heating oil underground storage tank (UST) on August 27, 2009, diesel soil contamination was encountered at 5.5 feet below ground surface.

Approximately 20 cubic yards of contaminated soil was excavated from the UST excavation and transported to the City of Valdez Bailer Facility with diesel range organic (DRO) soil concentrations of 9,760 mg/kg. An additional two feet of soil was excavated to approximately 8 feet below ground surface. The upper aquifer was measured in a groundwater sump adjacent to the site at approximately 13 feet below ground surface. Groundwater was not observed in the tank excavation.

FY13 Actions:

Additional groundwater assessment and site closure.

FY14 Actions

Closure letter

FY15 and FY16 Projected Actions:

None

Project/Site Name: **Coastal Drilling Mile 0.5 Kenai Spur Highway**
Location: Soldotna
Hazard ID Number: 464
Project Manager: Campbell
Ledger Code: 14932960
Primary RP: Don Jack

Site Management Category: CSP Lead and RP Lead
Site type: Oilfield services

Situation:
The Coastal Drilling site was reported to the Department of Environmental Conservation (DEC) on July 2, 1988, under the Kenai Special Projects program. The Kenai Special Projects program was designed to identify and inventory historical contaminated sites on the Kenai Peninsula. Coastal Drilling is an abandoned industrial site, primarily comprised of two buried waste disposal pits. These pits were formerly used to dispose of industrial waste associated the oil field drilling activities for approximately 25 years. An estimated 7,000 cubic yards of contaminated soil and solid waste are present on the site. The contaminants include used oil, chlorinated solvents, batteries, diesel fuel and various types of solid waste.

The site is located on 7.4 acres in Soldotna, Alaska, approximately 3,000 feet northwest of the junctions of the Kenai Spur Highway and the Sterling Highway. One 3,500 square foot building and two concrete building foundations are present. The immediate area is now served by the City of Soldotna public water system. A municipal water well for the City of Soldotna lies within ½ mile of the site.

A number of monitoring wells have been previously installed and sampled onsite. Groundwater is periodically sampled to monitor groundwater quality, and to ensure that contamination is not migrating offsite. Based on past groundwater quality monitoring data, contamination appears to be confined within the two buried disposal pits.

The property owner has submitted work plans to begin moving the site to closure with institutional controls. This year, the open pit will be addressed, removing solid waste and batteries. A former sump and grate will also be excavated to remove impacted soils. An engineering plan will be developed for next year to cap what is referred to as the closed disposal pit, which should bring the site to closure with institutional controls. At this point we do not want to remove State installed monitoring wells or conduct monitor well sampling under State lead

FY13 Actions:
None

FY14 Actions:
State lead, none. The RP is now motivated to bring the site to closure with IC's. The RP's consultant is moving forward with remediation and plans to complete capping the site during the summer of 2015.

FY15 and FY16 Projected Actions:

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Conoco North Slope**
Location: Kuparuk and other oil fields on North Slope
Project Manager: Keather McLoone
Primary RP: ConocoPhillips Alaska

Hazard/Site ID Number: multiple
Ledger Code: 14146760

Site Management Category: RP Lead
Site type: Oil Production/Onshore

Situation:
Conoco currently has one Active Contaminated site, eleven Cleanup Complete with Institutional Controls, and twelve Cleanup Complete sites. Most of the work that Conoco is doing recently is Rehabilitation work with some Site Assessment in preparation for future use planning of former drilling pads and reserve pit closures

FY13 Actions:
ADEC had an annual meeting with Conoco, reviewed exploration site rehabilitation reports, coordinated with the Solid Waste Program (SWP), and corresponded with Conoco.

FY14 Actions:
ADEC reviewed several rehabilitation reports and planning documents for site assessment work to be completed during the 2014 season. ADEC also reviewed a Corrective Action report and wrote a decision letter for the West Sak 16 site. ADEC also coordinated with the SWP and corresponded with Conoco.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Contech/Culfabco**
Location: Anchroage
Project Manager: Meghan Dooley
Primary RP: Contech Construction Products, Inc.

Hazard ID Number: 4075
Ledger Code: 14199760

Site Management Category: RP Lead
Site type: Commercial/Retail/Office

Situation:
A Limited Phase II Environmental Site Assessment conducted in 2003 encountered petroleum contamination in the soil and groundwater. 100 – 140 tons of petroleum impacted soil was removed from the site in 2004. The source is assumed to be hydraulic fluid that leaked over time to the surface from heavy equipment. DRO contamination in the soil and groundwater remain following the excavation. A PRP letter was sent to the responsible party in 2010. Additional characterization was conducted to investigate sumps as potential source areas, and additional groundwater wells were installed.

FY13 Actions:
Approximately 2.5 cubic yards of contaminated soil was excavated and disposed offsite. Additonal groundwater samples were collected showing petroleum impacted groundwater.

FY14 Actions:
A limited investigation was conducted at an outdoor sump to determine if it is a source are for site contamination. Exceedances in the sediment and sump water were noted during investigation and 670 gallons of water were evacuated form the sump. Additional sampling was planned to determine if the soil beneath the sump was impacted and the surrounding groundwater.

FY15 and FY16 Projected Actions:

- Interim Removal Action under 18 AAC 75.330
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name:	**Cornerstone Marketplace 43977 Sterling Highway**	
Location:	Soldotna	Hazard ID Number: 25864
Project Manager:	Campbell	Ledger Code: 14323060
Primary RP:	Tricor Development Corporation	

Site Management Category: RP Lead

Site type: Laundry/Dry Cleaner

Situation:
Contaminated Sites Program (CSP) staff issued a closure decision for the Cornerstone Market Place site this week. This site is located in Soldotna, and was the location of a former coin operated dry cleaning facility that operated approximately 30 years through the 1960s, 70s, and 80s. Site assessment work identified low levels of dry cleaning solvent remaining in soil and groundwater. Soldotna staff determined the residual contamination should not pose an unacceptable risk to human health or the environment.
The property is being sold, and the developer plans to demolish existing buildings in order to construct a new Walgreens store, and other commercial structures. Dry cleaning solvent impacted soil and groundwater may be considered to be listed hazardous waste and may be subject to regulation under the Federal Resource Conservation and Recovery Act (RCRA). Listed hazardous waste designation is established by source or generating process, not by concentration of wastes or environmental media. The Soldotna ADEC office has been contacted by the City of Soldotna staffs and a local contractor bidding on constructions work. The parties are concerned about RCRA regulations, and RCRA-related liabilities associated with the construction work and development of the property. The developer is working with the environmental consulting company Shannon & Wilson. CSP staff are referring all contacts with RCRA related concerns and questions to the Environmental Protection Agency, since EPA administers RCRA regulations in the State of Alaska.

FY13 Actions:
Phase I and II environmental investigations.
FY14 Actions:
Continuing Phase II work. Site closure. New owner and site development. Reopen site to manage impacted soil.

FY15 and FY16 Projected Actions:

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Crowley Jet A Fuel Tank 471 Newhalen Tank Farm**
Location: Newhalen
Hazard/Site ID Number: 25452
Project Manager: Grant Lidren
Ledger Code: 14277760
Primary RP: CPD Alaska, LLC

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
On October 30, 2008, approximately 13,630 gallons of jet fuel discharged from a 32,974 gallon AST #471. Crowley immediately removed 10,853 gallons of jet fuel from secondary containment of the tank farm, but 2,777 gallons of jet fuel were unaccounted for and suspected to have breached secondary containment. The Tank Farm has since been decommissioned and contaminated soil is being land farmed onsite. Groundwater is being sampled annually from monitoring wells.

FY13 Actions:
The land farmed soil was tilled five times and performance soil samples collected contained petroleum constituents above method two soil cleanup levels. Only two of the eight onsite monitoring wells sampled contained petroleum constituents above Table C Groundwater cleanup levels.

FY14 Actions:
The land farmed soil was tilled five times and performance soil samples collected contained petroleum constituents above method two soil cleanup levels. Three out of the four onsite monitoring wells sampled contained petroleum constituents above Table C Groundwater cleanup levels.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335

Project/Site Name: **Crowley Nenana Fuel Terminal Header Areas**
Location: Nenana Hazard ID Number: 25655
Project Manager: James Fish Ledger Code: 14311160
Primary RP: Crowley Petroleum Distribution Alaska, LLC.

Site Management Category: RP-Lead
Site type: Bulk Fuel Storage

Situation:
The site is located at the Crowley Fuel Terminal along the bank of the Tanana River (near the Nenana and Tanana River confluence) in Nenana. Petroleum-contaminated soil was encountered during a corrosion inspection at the barge fuel delivery piping header area in 2010. Initial characterization efforts indicated the gasoline range organics (GRO) and Diesel range organics (DRO) exceed soil cleanup levels. Groundwater was also contaminated with GRO, DRO, benzene and fuel additives (EDC, or ethylene dichloride).

Subsequent investigations have indicated much more widespread soil and groundwater contamination that extends south into a relic railroad car off loading area, a middle tank farm and lower tank farm, and north (and possibly west) into the Tanana and Nenana rivers. Groundwater in monitoring wells close to the Tanana River exceed water quality standards for petroleum compound (total aromatic hydrocarbons and total aqueous hydrocarbons). Additional site characterization and groundwater monitoring is currently underway.

FY13 Actions:
During FY13, ADEC oversaw the RP contractor conduct additional delineation of petroleum contamination in soils and groundwater, and groundwater monitoring (including water level transducer deployment) and pore water sampling along the Tanana River.

FY14 Actions:
During FY14, ADEC reviewed and approved groundwater monitoring reporting and additional plans to conduct groundwater monitoring (including an evaluation of the presence of free product in groundwater), and pore water sampling.

FY15 and FY16 Projected Actions:
Site Characterization under 18 AAC 75.335
Site Cleanup under 18 AAC 75.360

Project/Site Name: **Crowley Tank Farm - Fort Yukon**
Location: Fort Yukon
Project Manager: Grant Lidren
Primary RP: CPD Alaska, LLC

Hazard/Site ID Number: 25884
Ledger Code: 14325760

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
Petroleum-contaminated soil was discovered during the demolition of Crowley's former bulk fuel storage facility in Fort Yukon during the spring of 2012. Two source areas were discovered as a result: soil located within the bermed secondary containment area above the liner and the truck rack containment basin located outside the secondary containment area.

FY13 Actions:
Contaminated soil was excavated from the truck loading rack. Soil characterization samples collected contained petroleum constituents above method two soil cleanup levels. The contaminated soil was put in supersack bags and put in a stockpile onsite. Contaminated soil was also excavated from the bermed secondary containment area and landfarmed below method two soil cleanup levels. Additional soil and groundwater characterization at the site contained petroleum constituents above method two soil cleanup levels and above table C groundwater cleanup levels respectively.

FY14 Actions:
Additional soil and groundwater characterization at the site contained petroleum constituents above method two soil cleanup levels and above table C groundwater cleanup levels respectively.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **Crowley Tank Farm Iliamna Airport**
Location: Fort Yukon
Project Manager: Grant Lidren
Primary RP: CPD Alaska, LLC

Hazard/Site ID Number: 25528
Ledger Code: 14289760

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
In 2009, an above ground storage tank released 1,507 gallons of aviation fuel. Contaminated soil was removed to the best extent practicable and 65 cubic yards was stockpiled onsite. Groundwater is currently being sampled annually from monitoring wells.

FY13 Actions:
Ten soil borings were advanced and eight were completed as monitoring wells and two as temporary well points. Soil samples collected from two of the 10 borings contained petroleum constituents above method two soil cleanup levels. Groundwater samples were collected from the 10 new monitoring wells and six historic monitoring wells in July and again in October. Only five monitoring wells sampled contained petroleum constituents above Table C Groundwater cleanup levels.

FY14 Actions:
Groundwater samples from 10 select monitoring wells did not contain concentrations above ADEC Table C groundwater levels. The 65 cubic yard stockpile was transported to the Newhalen landfill.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335

Project/Site Name: **D & G Express**
Location: Bethel Airport
Project Manager: Paul Horwath
Primary RP: David L. Lefner

Hazard ID Numbers: 2465
Ledger Code: 14241260

Site Management Category: RP Lead
Site type: Mechanical Maintenance Facility located on an ADOT Lease Lot at the Bethel Airport.

Situation:
Numerous drums primarily containing used oil, and aviation gas from an above ground fuel storage tank resulted in the contamination of soil with gasoline, diesel fuel, engine oil, and a very limited area with pentachlorophenol. The extent of the soil contamination was identified and contaminated soil was excavated and placed into a soil treatment cell which was constructed onsite. Soils remains in the treatment cell until sampling show that the contaminant concentrations reached acceptable levels for landspreading onsite.

FY13 Actions:
Continued treatment of contaminated soil in the onsite soil treatment cell.

FY14 Actions:
ADEC determined that the contaminant concentrations in the contaminated soils met the site cleanup levels, and could be landspread onsite. ADEC issued a cleanup complete determination, with institutional controls to address a small area of the property that was capped with reinforced concrete in the effort to prevent future exposure to pentachlorophenol contamination in soils at, and near, the soil surface.

FY15 and FY16 Projected Actions:
- No further actions projected.

Project/Site Name:	**DeHarts Store – 11735 Glacier Highway**	
Location:	Auke Bay	Hazard ID Number: 25791
Project Manager:	Bruce Wanstall	Ledger Code: 14321260
Primary RP:	DeHarts LLC	

Site Management Category: RP Lead
Site type: Residence and Commercial/Retail/Office

Situation:
On March 21, 2009 a plow vehicle struck an aboveground heating oil tank near the northwest corner of DeHarts Auke Bay Store, releasing ~600-700 gallons of diesel fuel from the tank to the ground surface. The fuel traveled into the crawlspace beneath the north end of the building and into the foundation drain system. From the drain system the fuel travelled through a drain culvert, pipe, and into Auke Bay at Statter Harbor. The building is comprised of a commercial store and four residential apartments. Following initial response efforts contaminated soil remains above DEC cleanup levels remains in the building crawlspace.

FY13 Actions:
DEC letter dated January 31, 2012, was sent to the responsible party DeHarts LLC with a formal request to submit a workplan for approval. The purpose for site investigation into residual soil contamination in the building crawlspace is risk evaluation of exposure pathways inherent to residential land use. Results will determine if additional soil removal cleanup activity is necessary. The letter includes notification of State Interest for RFA cost recovery procedures, introduction to CS quality assurance, workplan requirements and the cleanup process.

FY14 Actions:
DEC letter dated February 24, 2014, approved a Site Assessment and Remedial Action Plan submitted by an environmental consultant on behalf of DeHarts LLC. The objective is to remediate an estimated volume of fifty cubic yards of contaminated soil that remains in the building crawlspace.

FY15 and FY16 Projected Actions:

- Interim Removal Action under 18 AAC 75.330
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Risk Assessment under 18 AAC 75.340 (f)
- Site-specific analysis under 18 AAC 75.340 (i)(2)
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380
- Settlement Agreement / Compliance Agreement Negotiation

Project/Site Name: **Delta Western Dutch Harbor (Bulk Plant and Dock Pipelines)**
Location: Dutch Harbor/Unalaska
Hazard ID Number: 487 and 25993
Project Manager: Meredith Savage
Ledger Code: 14997060

Primary RPs: Delta Western

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
The military built and operated a bulk fuel tank farm at Rocky Point during World War II. Post-war the government leased the tank farm to Standard Oil. In 1974, the government transferred the property to the Ounalashka Corporation (OC) under the ANCSA. OC continued to lease the facility to Standard Oil and subsequently to Delta Western, which continues to operate the tank farm.

Numerous fuel spills and releases have occurred over the years that the tank farm has been operated. Various sites have been or are being addressed by the US Army Corps of Engineers (formerly used defense sites), Chevron and Delta Western (shared responsibility sites) and Delta Western (spill/releases that occurred during recent Delta Western operations).

FY13 Actions:
DEC oversight activities entailed reviewing and approving workplans and reports on soil characterization and management during installation of new pipelines and a proposed dock expansion, closing in-active bulk fuel storage tanks, and mitigation and monitoring of contaminated water discharge from inactive fuel tanks and associated access tunnels.

FY14 Actions:
DEC continued oversight activities including reviewing and approving workplans and reports on soil characterization and management during installation of new pipelines and a proposed dock expansion, closing in-active bulk fuel storage tanks, and mitigation and monitoring of contaminated water discharge from inactive fuel tanks and associated access tunnels. Additional oversight activities included correspondence and meetings with the larger Potentially Responsible Party group over the need to properly close the remaining underground bulk fuel storage tanks.

FY15 and FY16 Projected Actions:
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name:	**Delta Western Gas Station Haines**		
Location:	Haines	Hazard ID Number:	25489
Project Manager:	Bruce Wanstall	Ledger Code:	14933260
Primary RP:	Delta Western Inc		

Site Management Category: RP Lead
Site type: Gas Station

Situation:
In September 2008, DEC was notified of a sheen and a black, globular product in the Spruce Road drainage ditch behind the Delta Western Tesoro Station. DEC approved site controls that would protect surface drainage to Sawmill Creek until investigation and cleanup efforts could resume in spring of 2009. In May 2009, site excavation and analytical soil sample results confirmed that subsurface contamination exceeded soil cleanup levels for gasoline, diesel and benzene, toluene, ethylbenzene and xylenes compounds. No longer suspected to be the result of historic release, Delta Western performed a property-wide investigation and although an initial test failed, a second line pressure test on June 25, 2009, identified an unleaded gasoline dispenser line as the source of a gasoline spill to the subsurface.

FY13 Actions:
In conjunction with paving the facility in the summer of 2012, Delta Western installed a bioswale treatment system to treat surface runoff and in fall 2012 installed a groundwater collection and treatment system. Surface water flows through a vegetated bioswale and contaminated groundwater is filtered through granulated activated carbon (GAC) in a 6-Ft diameter subsurface tank before discharge. By April 2013 analytical sampling had demonstrated effective removal of hydrocarbons. As a result DEC approved the facility Sampling Analysis and Groundwater Treatment Plan. The results of interim analytical sampling during a high groundwater flow event indicated a benzene breakthrough so, in June 2013, Delta Western installed additional GAC units in the groundwater treatment system.

FY14 Actions:
In August, 2013 Delta Western discovered natural occurring bacteria oxidizing iron in the groundwater was clogging the filtration system with orange flock. Analytical sample results showed an effective removal rate of petroleum hydrocarbons from groundwater but regular removal of flock slime and GAC replacement is necessary to maintain system functionality. By letter dated May 13, 2014, DEC approved a Delta Western Groundwater Collection Sampling and Analysis Plan that provides defensible control measures in a long term plan that protects complete exposure pathways and receptors at the site until the fate and transport mechanisms for contaminated media no longer present a risk.

FY15 and FY16 Projected Actions:

- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380
- Settlement Agreement / Compliance Agreement Negotiation

Project/Site Name: **Delta Western Tank Farm Dillingham**
Location: Dillingham
Project Manager: Campbell
Primary RP: Delta Western

Hazard ID Number: 25770
Ledger Code: 14319460

Site Management Category: RP Lead
Site type: Laundry/Dry Cleaner

Situation:
On September 19, 2011 surface water samples were collected from a seep below the tank farm after a seep was observed in June of 2011 near the shoreline in the rock outcrop along the southwest property boundary. Diesel range organics was detected at 29.5 milligrams per liter (mg/L), gasoline range organics at 4.2 mg/L, benzene at 0.6 mg/L and the State of Alaska Water Quality Standard exceeded for total aromatic hydrocarbons (TAH) at 1.727 mg/L and total aqueous hydrocarbons (TAqH) at 1.7304 mg/L. A surface stain was also identified above the sheen and pipe leading northwest from the sheen for approximately 5 feet.

FY13 Actions:
Annual groundwater monitoring.

FY14 Actions:

Requirement for additional investigation, in response to new releases at the site. Tank farm is adjacent to surface water.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **Delta Western Tank Farm Haines**
Location: Haines
Project Manager: Bruce Wanstall
Primary RP: Delta Western Inc

Hazard ID Number: 2970
Ledger Code: 14127760

Site Management Category: RP Lead
Site type: bulk fuel storage

Situation:
As part of a 2001 DEC/IPP compliance order by consent, a previous owner/operator repaired an oil/water separator and removed contaminated surface soil prior to paving the Truck Rack. Unresolved questions about residual soil contamination at the facility remained open until 2011 when the current property owner advanced trenches at the site to investigate the source of oil observed in the off-site the storm water ditch located below the property on Beach Road. Soil and water samples confirmed that the Oil/Water Separator (OWS) system was the source and DRO and VOCs were the primary contaminants of concern. The site is currently in closed status with institutional controls to periodically notify DEC of any change in land use and submit for approval any proposal to transport soil and/or groundwater off-site before beginning the work.

FY13 Actions:
Delta Western decommissioned the faulty OWS system and advanced a broad series of soil borings to collect samples that characterize residual contamination in the subsurface. Sample analysis indicates levels of GRO and VOC compounds are at or below M2 MTG and the levels of DRO are between M2 MTG and human health criteria. Residual contamination exists in subsurface soil extending from an average depth of ten feet up to a layer of relatively clean overburden between two and five feet thick at the surface. Since VOC and SVOC compounds are not present in residual soil contamination above M2 MTG levels, any off-site migration to surface water by intermittent groundwater at the site is unlikely to violate 18 AAC 70 Water Quality Standard criteria.

FY14 Actions:
Delta Western consultant performed an interim removal action of contaminated soil followed by a site investigation to demonstrate that residual petroleum contamination remaining at the site is in a discontinuous subsurface soil layer averaging between four and ten feet below the surface in the southeast quarter of the property in concentrations below human health based cleanup levels. An estimated volume of fifty cubic yards or less of the soil in this layer is in concentrations above migration to groundwater soil cleanup levels. This portion of the property is subject to institutional controls to ensure the contamination remains undisturbed unless a cleanup effort is initiated with prior approval from DEC. Since migration from soil in the shallow groundwater zone is minimal for lack of water, soil conditions are protective of off-site migration. Petroleum contaminated soil stockpiles have been transported off-site and remediated.

FY15 and FY16 Projected Actions:

Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Dena'ina Wellness Center**
Location: Kenai
Project Manager: Campbell
Hazard ID Number: 25900
Ledger Code: 14328060
Primary RP: KIT
Site Management Category: RP Lead
Site type: Former power generating site

Situation:
During the construction of an access driveway near the entrance off Upland Street, hydrocarbon soil contamination was encountered. Laboratory sample results detected diesel range organics (DRO) at 1,020 milligrams per kilogram (mg/kg) at 2 feet, and 7,010 mg/kg at 5 feet below ground surface.

FY13 Actions:

Site investigation, remediation and closure.

FY14 Actions:

Site Closed.

FY15 and FY16 Projected Actions:

None.

Project/Site Name:	**Drift River Terminal**	
Location:	Drift River, west side of Cook Inlet	Hazard ID Numbers: 1823, 7, 981, 3762
Project Manager:	Paul Horwath	Ledger Code: 14963060
Primary RP:	Hilcorp Alaska, LLC	

Site Management Category: RP Lead
Site type: Burn/Fire Training Pit

Situation:
The Drift River Terminal is located on the west side of Cook Inlet. The Terminal collects and stores crude oil from upstream production facilities, for loading onto oil tankers for shipment to refineries; usually the Tesoro Refinery located in North Kenai on the east side of Cook Inlet. There are currently four sites that remain open in ADEC's contaminated sites database at the Drift River Terminal. The site with activity during FY13 and FY14 is the Drift River Facility - Burn Pit site.

From 1967 to 1970 oil and water skimmed off the top of the ballast water tank was pumped into an unlined pit. After allowing physical separation, the oil layer was ignited. Boiling of the underlying water would cause the pit to over flow. A tar layer from the burning of this oil was visible in the soils at the location of the former burn pit.

A soil treatment cell was constructed at this facility, and approximately 7000 cubic yards of contaminated soils were excavated from the former Burn Pit in 2004. These soils have been treated using active land farming within the soil treatment cell in order to reduce contamination concentrations to ADEC approved levels.

FY13 Actions:
Land farming of the contaminated soils continued and with ADEC receiving, reviewing, and approving the upper 12" depth of soil in the soil treatment cell for onsite disposal, after sampling and analysis reports demonstrate soil cleanup levels have been met.

FY14 Actions:
Land farming of the contaminated soils continued and with ADEC receiving, reviewing, and approving the upper 12" depth of soil in the soil treatment cell for onsite disposal, after sampling and analysis reports demonstrate soil cleanup levels have been met.

FY15 and FY16 Projected Actions:
- Additional soil treatment and disposal activities
- Site Cleanup under 18 AAC 75.360

Project/Site Name:	**Dutch Harbor Warehouse WWII Building 551**		
Location:	Dutch Harbor	Hazard ID Number:	3659
Project Manager:	Meredith Savage	Ledger Code:	14894860

Primary RP: Ounalashka Corporation

Site Management Category: RP Lead
Site type: Hazardous substance, PCBs

Situation:
Building 551 is a former military building that served as the Navy Mess Hall during WWII. The site is contaminated with polychlorinated biphenyl (PCB), the source likely from three transformers that were located in the front of the building. At some point the transformers were removed from the site. In 1994-95 a study was conducted on 17 Aleutian Islands examining organochlorine contamination in blue mussels and one of the sampling sites was the Delta Western dock area that is directly across the street from Building 551. Analysis of blue muscle samples collected there showed elevated levels of PCBs. Later the EPA conducted a site inspection under CERCLA and found similar PCB levels. In 2000, DEC mailed letters to the City of Unalaska, Ounalashka Corporation, and the U.S. Corps of Engineers identifying each as a potentially responsible party (RP). In 2002 Ounalashka Corporation was identified as the primary RP. Little action on this site occurred until 2013.

FY13 Actions:
Site work consisted of a preliminary soil investigation conducted by a contractor for the Ounalasha Corporation.

FY14 Actions:
Site characterization soil sampling to discover the extent of PCB contamination. DEC oversight activities included reviewing and approving the work plan for this activity.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Site-specific analysis under 18 AAC 75.340 (i)(2)

Project/Site Name: **Exxon Mobil NSlope**
Location: North Slope
Project Manager: Keather McLoone

Hazard/Site ID Number: multiple
Ledger Code:14266560

Primary RP: Exxon Company USA

Site Management Category: RP Lead
Site type: Oil Exploration/Onshore

Situation:
Exxon has several listed contaminated sites with at least one that is currently unconfirmed but may become Active based on further investigation of a potential sheen. Most of these sites are located east of Prudhoe Bay at Point Thompson but one is located in Deadhorse. Those located at Point Thompson, are sites are in various stages of rehabilitation after oil wells have been plugged and abandoned but, in most cases, reserve pits are still open.

FY13 Actions:
No activities were charged during FY13.

FY14 Actions:
ADEC had an annual meeting with Exxon and their consultant, ERM, to discuss contaminated site and solid waste issues. ADEC reviewed various planning and reporting documents.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **FIA – Block 3 Lot 12 – Saupe Enterprises**
Location: Fairbanks Hazard ID Number: 4314
Project Manager: Robert Burgess Ledger Code: 14222960
Primary RP: Chevron Environmental Management Company

Site Management Category: PRP

Site type: Bulk Fuel Storage

Situation:
From 1962 to 1973, Chevron operated a bulk fuel facility at the Fairbanks International Airport which consisted of eight above ground storage tanks (ASTs). Contamination appears to be from surface spills of aviation gas and jet fuel. Free product is present at the site during periods of low groundwater, and the dissolved contaminant plume affects the adjacent downgradient property. Several years of characterization and monitoring have allowed nearly complete characterization of the relatively large contaminant plume. Groundwater at the site has a shallow gradient and may be susceptible to changes in flow direction. Recent investigations focused on determining if other potential sources could contribute to the large plume, and results suggest that there are no other sources. Chevron is preparing a remedial plan for the site that may be implemented in summer of 2015.

FY13 Actions:
Work consisted of groundwater monitoring, an assessment of LNAPL mobility, fingerprinting of product to determine its composition, vapor intrusion assessment, and installation of additional soil borings and monitoring wells.

FY14 Actions:
Work consisted of groundwater monitoring, installation of dataloggers to document seasonal changes in groundwater gradient and flow, and installation of additional soil borings and groundwater wells to evaluate the potential of contamination on the downgradient property originating from a different source, as well as to delineate the LNAPL and dissolved phase plumes.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360

Project/Site Name:	**FIA – Tesoro Alaska Old Bulk Fuel**		
Location:	Fairbanks	Hazard ID Number:	1399
Project Manager:	Robert Burgess	Ledger Code:	14802760
Primary RP:	Tesoro Companies, Inc.		

Site Management Category: RP Lead

Site type: Bulk Fuel Storage

Situation:
The site is an inactive terminal/tank farm located at the Fairbanks International Airport. Facilities at the site included four 5,000 barrel above-ground storage tanks (ASTs) and two 20,000 barrel ASTs in addition to a warehouse, pump building, and a truck loading rack. The terminal was also served by a rail loading rack located across the road from the property. The facility was used by Tesoro from 1974 through 1997, and the tanks and loading racks have been out of service since that time though the warehouse continues to be used as a shop and storage facility. Investigations in the early 1990s discovered free product and soil contamination at the site. The main COCs were DRO, GRO, and benzene. Subsequent investigations in the early 2000s discovered EDC and delineated an EDC plume that went off the property and affected a downgradient drinking water well. Remedial systems have been installed, including an air sparge curtain at the leading edge of the benzene plume that also is intended to cut off EDC migration from the source area. A pump and treat system recovers EDC downgradient, filters it through granulated activated carbon (GAC), and re-injects clean treated water near the source area. The most recent investigations have been designed to further investigate suspected source areas, delineate the benzene and LNAPL plumes (especially on the undefined upgradient plume margin to the south of the source area), monitor remedial effectiveness for EDC, and evaluate the risks of outdoor air inhalation and vapor intrusion. Work in 2014 identified methylene chloride as an additional contaminant of concern and indicated that there may be some risk of vapor intrusion in the buildings on the southern (upgradient) LNAPL and benzene plume boundaries. These building are located on adjacent airport property and are used by DOT. Tesoro has plans for further investigation in addition to remediation via chemical oxidation of EDC with persulfate and biostimulation using sulfate injections for benzene and petroleum hydrocarbons. Excavation of soil around the truck loading rack and/or the rail loading rack may also take place.

FY13 Actions:
Work consisted of additional groundwater monitoring, upgrade and maintenance of the pump and treat system, sampling of downgradient drinking water wells, and working with Tesoro and a prospective purchaser of downgradient property to test groundwater for EDC by installing monitoring wells.

FY14 Actions:
Work included maintenance of the remedial systems, installation of wells in the Carpenter subdivision to assist a prospective purchaser of property, extensive soil gas and sub-slab sampling to delineate contaminants in soil around the source area and evaluate vapor intrusion risk, repair and sampling of monitoring wells, installation of additional wells to delineate plume boundaries, and discussion of additional remedial efforts.

FY15 and FY16 Projected Actions:

- Interim Removal Action under 18 AAC 75.330
- Additional Site Characterization under 18 AAC 75.335
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360

Project/Site Name: **FIA USPS Former Air Cargo HOT**
Location: Fairbanks
Project Manager: Melody Debenham
Primary RP: United States Postal Service

Hazard ID Number: 4105
Ledger Code: 14148960

Site Management Category: PRP

Site type: Airport/Airfield

Situation:
An underground storage tank (UST) used to store heating oil for a former United States Postal Service (USPS) building at a lease lot at the Fairbanks International Airport was decommissioned in 2004. During decommissioning contaminated soil was encountered. Approximately 250 cubic yards of petroleum contaminated soil was removed and treated, however contaminated soil and groundwater remain at the site. Additional site investigation and characterization activities, including groundwater monitoring, have been performed in 2006, 2007, 2008, and 2010. Gasoline and diesel range organics (GRO and DRO), and benzene are present in the groundwater above applicable cleanup levels.

FY13 Actions:
Characterization activities in FY13 included the installation of 9 soil borings and 1 monitoring well to assess site conditions and determine if groundwater contamination is migrating off-site. Based on the results of this investigation, a work plan for additional soil and groundwater sampling was developed and implemented. An additional 11 soil boring and 3 monitoring wells were installed.

FY14 Actions:
Remedial action objectives were established for this site and remedial technologies were identified and screened to develop a corrective action plan. The corrective action plan for this site identified monitored natural attenuation as the remedial action. Additional groundwater monitoring was performed.

FY15 and FY16 Projected Actions:

- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name: **Former Bio-Tech Services Treatment Facility**
Location: Wasilla
Hazard ID Number: 2046
Project Manager: Meghan Dooley
Ledger Code: 14325860
Primary RP: Spinell Homes

Site Management Category: RP Lead
Site type: Commercial/Retail/Office

Situation:

The site was operated as a soil treatment facility from 1992-1995. The site was shut down in 1995 by the state due to lack of improved facilities including soil liners, monitoring wells, and secondary containment. A fire at the facility brought attention to unknown material on fire at the time of the visit, leaking waste oil drums, fuel on the ground, and improperly stored spent sorbent pads. Phase 1 and Phase 2 Environmental Site Assessments conducted in 2007 noted areas of staining, potential RECs, and confirmed exceedances of Table B1 and B2 of GRO, DRO, and VOC.

FY13 Actions:
ADEC issued a Potentially Responsible Party letter.

FY14 Actions:
A Site Characterization and Corrective Action Work Plan was reviewed and approved by ADEC. The objective was to evaluate the nature and extent of contamination associated with the site based on previous investigation. Contaminated soil exceeding inhalation/ingestion cleanup levels was excavated and either landspread for on site treatment or disposed at offsite soil treatment facilities. A Cleanup Complete with Institutional Controls determination was issued July 1, 2014.

FY15 and FY16 Projected Actions:

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Former Kavilco Bunkhouse - Kasaan**
Location: Kasaan
Project Manager: Danielle Duncan
Primary RP: Organized Village of Kasaan

Hazard ID Number: 25940
Ledger Code: 14330060

Site Management Category: CSP Lead

Site type: Cannery/seafood processing

Situation:
This site (Former Kavilco Bunkhouse - Kasaan) is located in Kasaan and is a former cannery facility that operated from about 1902-1950. It was purchased by Kavilco Inc. in 1974 and in about 1980 the cannery buildings were removed. The former bunkhouse is located on a bench approximately 190 ft. east of Kasaan Bay. In August of 2012, during utility construction activities (trench digging) on the north side and near the foundation of the former Kavilco bunkhouse, petroleum-contaminated soil was discovered.

FY13 Actions:
Characterization and cleanup activities conducted under the regulatory authority of the Contaminated Sites Program for the former Kavilco bunkhouse began in October of 2012. R&M was hired by the Organized Village of Kasaan to characterize the contamination. R&M submitted six samples from four different areas of the site for various analyses including DRO, RRO, and BTEX. Two of these samples had an averaged concentration of 740 mg/kg, which exceeded the Method 2 Soil Cleanup level of 230 mg/kg for migration to groundwater as outlined in Table B2 of 18 AAC 75.341(d). After receipt of these results, DEC staff visited the site with R&M staff in November. During this site visit it was determined that because the DRO contamination was of a relatively low level and because it was present in the subsurface near the foundation on the north side of the building, contaminated soil should remain in place. However, DEC requested that all upland surface drainages be redirected away from the north side of the building. In addition, DEC requested that gutters be installed on the building and a barrier be placed over the soil on the north side of the building. R&M would report back to DEC with documentation and pictures once work was completed.

FY14 Actions:
In April of 2014, DEC received the Site Inspection Notes from R&M Engineering which outlined in pictures mitigation efforts on the property. Soil sample results indicated that DRO contamination in soil remained above the migration to groundwater cleanup level at a concentration of approximately 740 mg/kg, but is de minimis in extent and below the ingestion and inhalation cleanup levels. In addition, this contamination in soil is below the surface (2-4 ft.) and limited to the northeast corner of the building. As a result, the subsurface soil exposure pathway is complete but de minimis. For these reasons, this site received a "Closed" designation on the Contaminated Sites Database, subject to standard conditions.

FY15 and FY16 Projected Actions:
None: Cleanup complete and site closed without institutional controls.

Project/Site Name: **Former Quality Fabrication**
Location: Anchorage
Project Manager: Joshua Barsis
Primary RP: Northrim Bank

Hazard ID Number: 3004
Ledger Code: 14310360

Site Management Category: RP Lead
Site type: Log Processing/Sawmill

Situation:
Site characterization activities conducted by Shannon & Wilson (S&W) in October 2010 and April 2011 revealed petroleum and tetrachloroethene (PCE) impacted surface soil south of the "tent" building in the vicinity of an unpaved track.

FY13 Actions:
In August of 2012, one monitoring well (B7MW) was installed south of the "tent" building to evaluate for diesel range organics (DRO), residual range organics (RRO), and PCE in the groundwater. No contaminants were detected in the groundwater; however, the depth to groundwater during sampling was measured at 8.18 feet BGS, which was over 5 feet higher than the top of the well screen. For this reason, the analytical results from this event may be biased.

FY14 Actions:
In November of 2013, the PCE contaminated soil was excavated from the ground and stockpiled in a long-term storage bio-cell. Analytical samples collected from the base and sidewall of the excavation did not exhibit any constituents that exceeded the ADEC cleanup criteria.

In May of 2014, the onsite monitoring wells were decommissioned and the bio-pile was sampled. Concentrations of RRO and PCE were detected in the bio-pile samples; however, below the ADEC cleanup criteria.

FY15 and FY16 Projected Actions:
- Site Cleanup under 18 AAC 75.360
- Risk Assessment under 18 AAC 75.340 (f)
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Former Snopac Seafood Processing Facility- Dillingham**
Location: Dillingham
Hazard ID Number: 25874
Project Manager: Meghan Dooley
Ledger Code: 14324360
Primary RP: Snopac Products

Site Management Category: RP-Lead
Site type: Cannery/Seafood Processing

Situation:
The site is located at the Former Snopac Cannery in Dillingham on the Wood River. Petroleum contamination was present in soil from leaks and spills at the site and dioxin contamination was present in soil at an old burn pit. Areas of petroleum contamination were excavated or covered and the dioxin contamination was capped with geotechnical fabric and soil in 2013 and 2014. The cannery was sold to Icicle Seafoods in 2013.

FY13 Actions:
During FY13, ADEC oversaw additional sampling at the site and the development of an engineering controls plan to control exposure to contamination that could not reasonably be removed from the site.

FY14 Actions:
During FY14, ADEC closed the site with institutional controls

FY15 and FY16 Projected Actions:
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Four Seasons Mobile Home Park**
Location: Anchorage
Project Manager: Eileen Olson
Hazard ID Number: 25921
Ledger Code: 14329160
Primary RP: Four Seasons, LLC

Site Management Category: RP Lead
Site type: Residence

Situation:
The site has been in use as a mobile home park since the mid-1960s. Conversion of the approximately 39-acre property from a mobile home park to a new manufactured housing development began in 2013 and is expected to be complete by fall 2014. Prior to natural gas becoming available in Anchorage in the early 1970s, the park was served by an underground piped heating oil distribution system that was gravity fed by a large aboveground storage tank (AST). The system was abandoned in place with the exception of the aboveground tank, which was reportedly removed in the mid-1980s. Soil and groundwater contamination was encountered at numerous locations throughout the system during site characterization work that begin in 2012. ADEC granted site closure in May 2014 following site cleanup and confirmation that soil and groundwater met cleanup standards. During subsequent utility installation work in July 2014, contaminated areas not previously identified were encountered and will require additional assessment.

FY13 Actions:
Initial site investigation took place in fall 2012 and was accomplished primarily by using a high pressure air knife to expose the abandoned underground piping system, with the soil associated with piping lengths and couplings systematically screened and sampled. The piping was subsequently removed and disposed of. A total of 417 tons of petroleum hydrocarbon-contaminated soil removed from various locations along pipelines and an additional 35 tons of soil associated with surface stains excavated from individual mobile home spaces were excavated and thermally treated off-site. ADEC requested a groundwater investigation.

FY14 Actions:
Work included excavating an additional approximately 4,500 tons of contaminated soil and drilling nine boreholes, with five completed as monitoring wells, adjacent to and within excavated areas. Soil and groundwater analytical results showed no contamination above applicable cleanup levels. The wells were decommissioned after the initial sampling. ADEC granted site closure in May 2014, but will require investigation of additional contamination encountered at the site during mid-July 2014 utility excavations.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Final Reporting under 18 AAC75.380

Project/Site Name: **Gaffney Road Area-Wide Ground Water Investigation**
Location: Fairbanks Hazard ID Number: 2919
Project Manager: Tamara Cardona Ledger Code: 14622260
Primary RP: State- Lead (see Gaffney East and West for details)

Site Management Category: CSP Lead
Site type: Laundry/Dry Cleaner

Situation:
The Gaffney Road Area site has had historical releases of tetrachloroethylene (PCE) from former dry cleaning operations, the wood-stave sanitary sewer system, and possibly other sources areas in the area. These releases have created two main PCE-contaminated groundwater plumes: the West PCE Plume and the East PCE Plume.

The Gaffney West plume is a result of multiple sources: the former Royal Master's Launderette (the current location of Good News Bible and Book Store), previous operations at the former Park and Sell facility, and sewer line releases that begin near Good News Bible and Book Store and continue south approximately 250 feet to the south side of Airport Way. The West PCE Plume extends approximately 3,000 feet in length to the northwest with the far end of the plume approximately 1,000 feet upgradient from the Golden Heart Utilities well field for the City of Fairbanks. The West PCE Plume has had mostly static groundwater concentrations during the past decade, and most of the plume has shown little tendency toward biodegradation.

The East PCE Plume is centered behind the fourplex of buildings that contain Coin King Laundromat, Stone Soup Community Center, Sunshine Alterations, and Forget-Me-Not Books (hereafter, "fourplex"). Based on the cumulative soil, groundwater, and soil gas data from characterization activities, the source area appears to be mainly located on property belonging to Coin King Laundromat. The East PCE Plume extends approximately 1,750 feet to the northwest with the far end likely near City Hall.

FY13 Actions:
No actions were completed under this LC. See Gaffney East and Gaffney West individually for a summary of the work completed.

FY14 Actions:
No actions will be completed under this LC. See Gaffney East and Gaffney West individually for a summary of ongoing work.

FY15 and FY16 Projected Actions:

- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name: **Gaffney Road East – CSP Lead**
Location: Fairbanks
Project Manager: Tamara Cardona
Primary RP: Coin King LLC
Hazard ID Number: 25573
Ledger Code: 14306160

Site Management Category: CSP Lead

Site type: Laundry/Dry Cleaner

Situation:
This site began as part of an area-wide effort to track tetrachloroethylene, trichloroethylene and 1, 2 dichloroethane contaminants in groundwater from multiple sources. Gaffney East has been made an individual site because it appears that a separate source of contamination exists associated with activities occurring at the Coin King Laundromat located on the East side of Cushman St. Vapor intrusion assessments from 2007-2010 indicate vapor intrusion is occurring in some of the buildings adjacent to Coin King Laundromat. Access to collect soil, groundwater or indoor air samples in the suspected source area has been denied by the property owner. However, in 2013 EPA obtained access to the property. Sampling results indicate that the highest soil and groundwater concentrations of the Gaffney East plume are indeed located on the Coin King property. Additional work is now needed to remediate the source area, after coordination to obtain access is completed or a warrant for access obtained.

FY13 Actions:
EPA conducted a preliminary assessment on the property revealing that Coin King is indeed where the source of the contamination is located at. Simultaneously, DEC conducted groundwater monitoring of the monitoring wells downgradient of the source area that have been used to monitor the Gaffney East contamination. Compound specific isotope analysis was also performed on selected monitoring wells.

FY14 Actions:
An extension of the FY13 contract has been put in place to conduct indoor air monitoring of buildings that had not been previously sampled. In addition, long term indoor air monitoring is being conducted in some of the buildings.

FY15 and FY16 Projected Actions:

- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360

Project/Site Name: **Gaffney Road West - Royal Master Laundrette**
Location: Fairbanks Hazard ID Number: 4503
Project Manager: Tamara Cardona Ledger Code: 14154580
Primary RP: State (settlement agreement)

Site Management Category: CSP Lead

Site type: Laundry/Dry Cleaner

Situation:
This site is part of an area-wide effort to track tetrachloroethylene, trichloroethylene and 1, 2 dichloroethane contaminants in groundwater from multiple sources. Gaffney West was made an individual site because Royal Masters Launderette was the location of a former dry cleaners where soil and groundwater contamination was found at the southwest corner of the building. Contamination in this area is causing vapor intrusion concerns for the building. This is currently the location of the Good News Bible and Bookstore on Gaffney Road. There has been a settlement agreement with the responsible parties, including the current owner and the former owner who operated the dry cleaning facility. The investigation to date has shown the plume does not extend to the city drinking water wells, which are approximately a half-mile downgradient of the site.

FY13 Actions:
Work consisted of continued operation and maintenance of the sub-slab depressurization system and soil vapor extraction system (SSD/SVE). Groundwater monitoring was also completed.

FY14 Actions:
Extension of the FY13 contract for continued operation of the SSD and SVE remediation systems.

FY15 and FY16 Projected Actions:

- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Gambell IHS Clinic**
Location: Gambell
Project Manager: Curtis Dunkin
Primary RP: Indian Health Services (IHS)

Hazard ID Number: 3834
Ledger Code: 14213160

Site Management Category: RP Lead
Site type: Hospital/Clinic

Situation:
In 1992 an initial site investigation was conducted to investigate a partially buried 1,500-gallon above ground storage tank (AST) and approximately 150 feet of associated piping. Additionally, a 500-gallon AST, which was placed at the site but never put into service, was also investigated. Results of the 1992 investigation confirmed that visible staining and evident odor were present; analytical results of soil samples confirmed diesel range organics (DRO) in soils at concentrations as high as 3,677 mg/kg.

In 2003 IHS performed additional site characterization work to confirm the presence of petroleum-impacted soils beneath the 1,500-gallon AST. Soil sample results reconfirmed DRO contamination was present in soils exceeding the migration to groundwater cleanup level of 250 mg/kg; results ranged between 523-3,822 mg/kg DRO.

In 2006 the former clinic structure was demolished, however the demolition work did not include the removal of the two ASTs, associated piping, or contaminated soils.

In 2008 ADEC approved cleanup levels for the site and also approved a removal action and site closure work plan, however the work was postponed and not implemented until 2012.

FY13 Actions:
Work consisted of reviewing, submitting comments, and approving an addendum to the 2008 Removal Action and Site Closure Work Plan, which was implemented by IHS in September-October, 2012. Field screening and analytical results of soil samples confirmed that DRO and other contaminants of concern concentrations in soils were below their respective ADEC-approved cleanup levels. ASTs and associated pipelines were decommissioned and disposed of onsite along with miscellaneous debris. Excavated soil was replaced and the site was graded.

FY14 Actions:
Work consisted of reviewing, submitting comments, and approving the 2012 Removal Action and Site Closure Report. Upon receiving a site closure request from IHS, ADEC determined that the IHS had adequately characterized the site and implemented the necessary cleanup work such that no unacceptable risks remained to human health and/or the environment. ADEC issued a no further action and cleanup complete determination letter to the IHS.

FY15 and FY16 Projected Actions:
- None per ADEC's cleanup complete determination in accordance with 18 AAC 75

Project/Site Name: **Gambell Street Cell Tower**
Location: Anchorage
Project Manager: Bill O'Connell
Primary RP: Global Tower Partners

Hazard ID Number: 25913
Ledger Code: 14328360

Site Management Category: RP Lead
Site type: Telecommunications

Situation:
Lead acid battery casings and lead contaminated soil were discovered during construction of a cell phone tower. The source of the contamination is believed to be historic dumping activities from the 1960's.

FY13 Actions:
A release investigation was conducted to evaluate the extent of contamination

FY14 Actions:
A fence was erected around the contaminated area and a Notice of Environmental Contamination was placed on the property which was closed with Institutional Controls.

FY15 and FY16 Projected Actions:

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name:	**General Electric TBE Machine - 49200 Kenai Spur Highway**		
Location:	Nikiski	Hazard ID Number:	3034
Project Manager:	Campbell	Ledger Code:	14604860
Primary RP:	General Electric		

Site Management Category: RP Lead

Site type: Former machine shop

Situation:
During the cleanup of a cesspool, that floor drains from the shop flowed into, a sample of its water was collected. Contamination was found. The contaminated water was removed and soil was excavated to approximately 12 feet below ground surface. Two soil samples were collected from the bottom of the excavation that indicated elevated levels of diesel range/gasoline range organics (DRO/GRO), ethylbenzene, xylene, and perchloroethylene (PCE) above maximum cleanup levels (MCLs). The contaminated soil was placed back into the excavation to further assess the extent of contamination. Approximately 700 gallons of water were removed from the cesspool and disposed of through Alaska Pollution Control. Excavation of the contaminated soil encompassed an area of approximately 28 feet long, 25 feet wide, and 6 to 12 feet deep (estimated 200 cubic yards).

FY13 Actions:
Workplan approval for remediation using a down-hole air sparging/air stripping technology.

FY14 Actions:

Installation and operation of ARTS remediation system.

FY15 and FY16 Projected Actions:
- Site Cleanup under 18 AAC 75.360
- Final Reporting under 18 AAC75.380

Project/Site Name: **Glacier Highway Battery Dump Site**
Location: Juneau
Project Manager: Danielle Duncan
Primary RP: John Hagmeier

Hazard ID Number: 4636
Ledger Code: 14260760

Site Management Category: RP Lead

Site type: Residence

Situation:
The Glacier Highway battery dump is a dump site for batteries, battery-related components, and general debris that originated from the Hagmeier property. The battery debris extends into the ADOT right-of-way in addition to the adjacent NOAA lab property. In 2003, as part of an interim action, NOAA hired CCI Inc. and removed approximately 4,000 pounds of battery related debris and lead contaminated soil. Soil lead concentrations ranged from non-detect to 50,000 mg/kg. A second interim action excavation was undertaken by NOAA in 2008 when NOAA contracted with BNC International to remove another 5 to 6 cubic yards of soil contaminated with battery waste. The 2008 excavation was stopped when it became apparent that complete removal of the battery waste was not possible without compromising the Glacier Highway embankment.

FY13 Actions:
None

FY14 Actions:
The NOAA facilities manager was contacted and site visits were made on two different occasions by DEC staff. Visual inspection of the site revealed the presence of battery casings poking out from the surface and DEC determined that further action was needed. The DOT was also contacted in case of road construction activities that may impact the site. DEC sent a PRP letter to Mr. Hagmeier in February of 2014 and after he acquired legal counsel, the case was referred to DOL. In April-May of 2014, ADOT contracted AMEC to do a series of soil borings to characterize lead contamination within the ADOT right-of-way. Using that data, ADOT plans to remove lead contaminated soils within the right-of-way when they begin work on Glacier Highway in the next few years. In July of 2014, Mr. Hagmeier hired Travis Peterson Environmental Consulting Inc. and approximately forty-two Super Sacks of lead contaminated soil and debris was excavated from his property. No excavation was conducted within the right-of-way nor the NOAA property; lead contamination up to 40,000 mg/kg remains in both places and will be removed in the near future.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Final Reporting under 18 AAC 75.380

Project/Site Name: **Greer Tank Yard- PCE**
Location: Anchorage
Project Manager: Bill O'Connell
Primary RP: Greer Tank Inc

Hazard ID Number: 1204
Ledger Code: 14846660

Site Management Category: RP Lead
Site type: Commercial/Retail/Office

Situation:
Tetrachloroethylene (PCE) was spilled at the site in the early 1980's resulting in soil and groundwater contamination which has migrated offsite to the neighboring property.

FY13 Actions:
Work consisted of meeting with the responsible party, their insurance company, attorneys, and consultants to plan for site investigation and monitoring.

FY14 Actions:
Work involved groundwater monitoring and evaluating for vapor intrusion risk at the site and on the neighboring property.

FY15 and FY16 Projected Actions:.

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **Gulkana Prepositioning Area & Army Site**
Location: Gulkana Hazard ID Number: 4298
Project Manager: Deb Caillouet Ledger Code: 14270660
Primary RP: U.S. Army Corps of Engineers

Site Management Category: Native American Lands Environmental Mitigation Program (NALEMP)
Site type: Landfill/Dump

Situation: The Village of Gulkana, a federally recognized tribe. They have entered in to a Cooperative Agreement (CA) with the US Army Corps of Engineers (USACE) to address impacts to their lands that are the result of U.S. Department of Defense activities. This has resulted in the development of a Strategic Implementation Plan to address the five highest priority sites identified by the Village of Gulkana. The sites are five dumps containing various debris and potential contamination from DoD activities.

FY13 Actions:
The Gulkana Village Council (GVC) submitted an addendum to a previously approved work plan. This addendum established field procedures for the excavation and removal of petroleum contaminated soil from an impacted area located within the boundaries of the area identified as Dump Site 3. GVC excavated ten truckloads of soil and shipped it to ASR in Anchorage for treatment. Diesel Range Organics concentrations remained above the applicable cleanup levels when the funding ran out.

FY14 Actions: The fourth CA between GVC and the USACE began July 1, 2013 and runs until June 30, 2015. A work plan has been submitted to further characterize the area at Dump Site 3 with remaining DRO and determine the need for further action. Additional field activities will include removal of the remaining surface debris, drums, old vehicle bodies, and metallic debris of military origin from Dump Site 3 and Dump Site 5.

FY15 and FY16 Projected Actions:
- Interim Removal Action under 18 AAC 75.330
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Final Reporting under 18 AAC75.380

Project/Site Name:	**Haines Borough Elementary School**		
Location:	Haines	Hazard ID Number:	26215
Project Manager:	Bruce Wanstall	Ledger Code:	14881560
Primary RP:	Haines Borough		

Site Management Category: RP Lead
Site type: School

Situation:
In February 2012, consultants for the Haines Borough performed site assessment sampling in conjunction with excavation to close-by-removal a 1,000-gallon heating oil underground storage tank (UST) at the Elementary School building. The tank was in such poor condition corrosion holes were obvious. Although soil in the pit had fuel stains, HB delayed removal of contaminated soil until after the building was demolished allowing full access. Consultants collected confirmation samples and returned soil to the excavation in the order it was removed. Out of the five analytical confirmation samples from the excavation, the greatest DRO concentration in soil was 17, 300 mg/kg in sample CZ03 collected at a depth of ten feet BGS.

FY13 Actions:
Following demolition of the Elementary School building in October 2011, workers advanced seven site investigation test pits in August 2012. The pit locations were oriented radially in three directions ranging in distance from the former UST site between five to thirteen feet. Approximately ten feet west of the former UST site, a former foundation concrete wall extended into the subsurface site to a depth of ten feet BGS, thus hindering sampling in that direction. Similar to the neighboring Primary School property, a gray, silty-clay, soil layer common to the area was observed at a depth of ten feet BGS. Out of seven analytical samples collected from the test pits, three found contamination. The greatest DRO concentration detected in soil was 12,000 mg/kg in sample E1-8 collected between seven and eight feet BGS. DRO concentrations in samples collected in four of the seven test pits were below laboratory reporting limits. The estimated volume of contaminated soil remaining at the site was five cubic yards.

FY14 Actions:
In accordance with 18 AAC 75.335 (b)(2), the concentration and extent of contamination has been determined to the maximum extent practicable at the site referenced in a DEC decision document dated March 17, 2014. The volume of remaining soil contamination at the former Elementary School UST site (Lot 8) is to de minimis extent and presents no unacceptable risk to human health or the environment. Under the cleanup complete closure the site is subject to the following standard conditions: Any proposal to transport soil or groundwater off-site requires DEC approval in accordance with 18 AAC 75.325(i) and movement or use of contaminated material in a manner that results in a violation of 18AAC 70 water quality standards is prohibited. The determination is in accordance with 18 AAC 75.380 and does not preclude DEC from requiring additional assessment and/or cleanup action if future information indicates that this site may pose an unacceptable risk to human health or the environment.

FY15 and FY16 Projected Actions:

Project/Site Name: **Haines Borough High School**
Location: Haines
Project Manager: Bruce Wanstall
Primary RP: Haines Borough

Hazard ID Number: 4219
Ledger Code: 14881560

Site Management Category: RP Lead
Site type: School

Situation:
The original site record encompassing four school sites and have been split by the new project manager into four separate Hazard IDs: 4219 (Haines Borough High School), 26214 (Haines Borough Primary School), 26215 (Haines Borough Elementary School), and 26216 (Haines Borough Vocational Technical School).

The 6,000-gallon UST is located on the north side of the high school among a network of utility corridors. In 2005 and 2008, site investigation test pits were advanced as near to the UST as feasible. A stained layer of subsurface soil was found surrounding the UST. The depth of the contaminated soil layer averaged between four and five feet BGS with clean soil above and below it. The average final depth of each test pit was ten feet BGS. The highest DRO concentration in analytical samples collected from the stained soil layer in 2005 test pits TP-1 and TP-2 was 3,840 mg/kg and in 2008 test pits TP-3, TP-4, TP-5 and TP-6 was 10, 600 mg/kg. Analytical results for BTEX and PAH compounds in confirmation samples collected from the stained layer were below laboratory reporting limits and site cleanup levels. A confirmation sample collected from a depth of six feet BGS in test pit TP-6 on the south side of the high school confirmed that the stained contaminated layer does not extend to that point. Groundwater was not encountered and was not investigated.

FY13 Actions:
None

FY14 Actions:
DEC determination letter dated April 8, 2014 stipulates institutional controls (ICs) on the property and provides a description of the contamination remaining at the site with signed agreement as an attachment. By signing the closure determination agreement, the Haines Borough land manager agreed to maintain the terms of the ICs on the property including periodic reporting to the DEC IC Unit. Institutional controls may be removed in the future if documentation can be provided that shows cleanup levels have been met. Any future change in land use may impact the exposure assumptions cited in the document. If land use zoning and/or ownership changes at the Haines Borough High School, these management conditions may not be protective and DEC may require additional remediation and revised conditions. Therefore the Haines Borough and any future property owner of this site shall submit a report to DEC every three years to document land use, or report as soon as the Haines Borough or a future landowner/operator becomes aware of any change in land ownership and/or zoning use, if earlier, with a written description and photographs of the condition of the ground surfaces overlying the contamination with notation of any changes since the last report.

FY15 and FY16 Projected Actions:

Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Haines Borough Primary School**
Location: Haines
Project Manager: Bruce Wanstall
Primary RP: Haines Borough

Hazard ID Number: 26214
Ledger Code: 14881560

Site Management Category: RP Lead
Site type: School

Situation:
The original site record encompassing four school sites and have been split by the new project manager into four separate Hazard IDs: 4219 (Haines Borough High School), 26214 (Haines Borough Primary School), 26215 (Haines Borough Elementary School), and 26216 (Haines Borough Vocational Technical School). In October 2009 the Haines Borough (HB) closed by removal a 1,000-gallon heating oil underground storage tank (UST) at the Primary School in Haines. In conjunction with the UST closure-by-removal, 125 cubic yards of contaminated soil was excavated and remediated off-site. After demolition of the building in October 2010, an additional 200 cubic yards of contaminated soil was excavated and remediated off-site.

FY13 Actions:
In 2012 soil from 24 test pits was screened for DRO and VOCs to select eleven analytical samples to characterize subsurface soil. The analytical results detected moderate concentrations of DRO in all eleven samples with a maximum DRO concentration of 6,200 mg/kg. Contaminated soil remains beyond the perimeter of previous removal excavations in a layer averaging less than one foot thick over the intact clay-like confining layer. As a result, DEC requested HB submit a plan to investigate groundwater for contamination

FY14 Actions:
In October 2013, HB installed three pre-packed monitor wells and collected samples of groundwater for chemical analysis. Based on results below cleanup levels, HB requested site closure with institutional controls (ICs). DEC closed the site with institutional controls outlined in a determination letter dated March 18, 2014, restricting movement of soil from below an estimated average depth limit of four feet below the ground surface. By signing the closure determination agreement, the HB land manager agreed to maintain the terms of the ICs on the property including periodic reporting to the DEC IC Unit. In August 2014, the HB reported sale of the property to Haines Residence LLC. DEC sent the new landowner a owner-specific version of the closure with ICs determination letter for signature. The new landowner returned a signed copy of the letter agreeing to maintain site controls and reporting requirements for future change in land use that may impact the exposure assumptions cited in the document. The ICs require submittal of a report to DEC every three years to document land use, or report as soon as the Haines Residence LLC or a future landowner/operator becomes aware of any change in land ownership and/or zoning use, if earlier, with a written description and photographs of the condition of the ground surfaces overlying the contamination with notation of any changes since the last report.

FY15 and FY16 Projected Actions:

Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Haines Borough Vocational Technical School**
Location: Haines
Hazard ID Number: 26216
Project Manager: Bruce Wanstall
Ledger Code: 14881560
Primary RP: Haines Borough

Site Management Category: RP Lead
Site type: School

Situation:
In June 2007, consultants for the Haines Borough (HB) performed a site assessment in conjunction with the closure by removal of a 1,000-galllon heating oil underground storage tank (UST) at the Vocational Technical (Vo-Tech) School in Haines. After removing the UST, a layer of stained soil appeared to follow a utility pipe that extended northeast and at the same depth of five feet below ground surface (BGS) a similar stained layer extended to the Vo-Tech building foundation. Excavation reached groundwater at five and a half feet BGS and continued to seven foot BGS. Eight soil confirmation samples (VT-1 through VT-8) and a field duplicate (Dup-10) were collected after HB loaded contaminated soil directly into trucks. After transport to the HB Wastewater Treatment Plant, the soil was placed between liners in the parking area. As clean soil was backfilled in the UST pit the HB consultant installed a groundwater monitor well screened from four to eight feet BGS. Site investigation demonstrated that contaminated soil is not impacting groundwater and the concentration and extent of soil contamination at the former UST site is characterized as limited and stable. HB requested site closure in accordance with 18 AAC 75.380, subject to institutional controls (ICs) under 18 AAC 75.375.

FY13 Actions:
None

FY14 Actions:
Based on analytical results below the groundwater cleanup levels, DEC issued a determination letter dated March 18, 2014, closing the site with ICs restricting movement of soil from below an estimated average depth limit of four feet BGS. By signing the closure determination agreement, the HB land manager agreed to maintain the terms of the ICs on the property including periodic reporting to the DEC IC Unit. In August, 2014, HB reported sale of the property to Haines Residence LLC.

DEC sent a new version of the closure with ICs determination letter to the new landowner. The new landowner returned a signed copy of the letter agreeing to maintain the terms of the ICs on the property including periodic reporting to the DEC IC Unit. The letter states that if Haines Residence LLC or a future landowner/operator becomes aware of any change in land ownership and/or zoning use, if earlier, they must submit to DEC a written description and photographs of the condition of the ground surfaces overlying the contamination with notation of any changes. DEC may require additional remediation and revised conditions if the changes significantly affect the assumptions on which the closure determination is made.

FY15 and FY16 Projected Actions:

Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Haines Sawmill**
Location: Haines
Project Manager: Bruce Wanstall
Primary RP: Chilkoot Lumber Company

Hazard ID Number: 2378
Ledger Code: 14611360

Site Management Category: RP Lead
Site type: Log Processing/Sawmill

Situation:
Ed Lepayri is the most recent owner/operator who purchased the mill property under an agreement with the State of Alaska and operated the mill as Chilkoot Lumber until it was shut down in 1991. The property is currently owned by the estate of Mr. Lepayri and is managed as Chilkoot Lumber by Larry Beck working from the Captain's Choice Motel in Haines.

In the past eight years, transformers, fly ash and numerous containers of hazardous materials such as waste oils, lubricants, paints, antifreeze, and water treatment chemicals formerly stored at the inactive industrial site have been transported off-site and remediated. The power plant, hog fuel barn and all other structures have been removed from the site and salvaged for scrap metal. A few of the single story mill frame structures remain near the fish processing plant and a bunkhouse remains in the upper portion of the property but all other structures have been removed. All the subsurface petroleum contamination has been excavated and is securely stored between impervious layers in stockpiles on-site.

FY13 Actions:
In a letter dated December 7, 2012, DEC requested that Chilkoot Lumber submit a plan for approval that will schedule a final cleanup remedy for stockpiled petroleum contaminated soil recovered by site investigation and cleanup of the property. In April, 2013, DEC performed a site inspection of the stockpiles to ensure that the covers are intact and berms are containing any water draining from the soil.

FY14 Actions:
In June, 2014, DEC approved a stockpile Soil Treatment Maintenance and Assessment Plan that begins with field screening and analytical sampling of the two soil stockpiles located at the former Haines Sawmill property. In accordance with the approved Stockpile Maintenance Plan, Chilkoot Lumber drained excess water from the two stockpiles and filtered the water through granulated activated carbon prior to discharge to the surface on-site.

On August 8, 2014, on behalf of Chilkoot Lumber, a consultant submitted to DEC the results of analytical sampling of the two stockpiles. Stockpile A and the upper half of Stockpile B have concentrations of petroleum that are marginally greater than migration to groundwater cleanup levels and unlikely to leach when exposed to normal rainfall. DEC approved the report results and requested that Chilkoot Lumber submit, for DEC approval, a formal plan to landspread the remediated soil on-site at an elevated location on the property away from drainages to avoid erosion mobilizing any petroleum contamination remaining in the soil. Chilkoot Lumber will continue the Soil Treatment Maintenance and Assessment Plan on the remaining lower half of Stockpile B scheduling sampling assessment in 2015.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Harrigan Centennial Hall**
Location: Sitka
Project Manager: IC Unit
Primary RP: City & Borough of Sitka

Hazard ID Number: 25497
Ledger Code: 14284360

Site Management Category: RP Lead
Site type: Other

Situation:
Harrigan Centennial Hall is located in downtown Sitka. An underground storage tank (UST) was decommissioned at the site in December 2009. One 1,000-gallon UST was scheduled for removal, but a second UST was discovered. Neither tank appeared to have holes. Approximately 10 cubic yards of contaminated soil were removed from the site. Diesel range organics (DRO) and benzene still remain in the soil above cleanup levels. Excavation to remove contaminated soil was halted due to possible damage to building foundation and associated structures. The soil at the site is tidally-influenced.

The site was transferred from PERP to CS in February 2010 following a recorded spill date of December 2009. A potentially responsible party (PRP) letter was mailed to the City & Borough of Sitka in May 2010. ADEC also mailed a letter requesting a site investigation and land farming work plan. Site visit by ADEC staff in July 2010 confirmed latitude/longitude coordinates and request for release investigation communicated to RP.

Four groundwater monitoring wells installed in May 2011. Groundwater sampling from MW 3 in June and all wells September 2011 for DRO, residual range organics (RRO), benzene, toluene, ethylbenzene and xylenes (total) (BTEX). No contamination detected from September 2011 samples in MW-2, MW-3, & MW-4. October 2012 groundwater sampling from monitoring wells were analyzed for DRO, RRO, BTEX, total aromatic hydrocarbons (TAH) and total aqueous hydrocarbons (TAqH). No contaminants detected in any of the four monitoring wells from October 2012 sampling event. In June 2014, consultant confirmed decommission of MW-1 & MW-2. The other two monitoring wells were absorbed into recent remodeling and landscaping at the site.

FY13 Actions:
Cleanup plan approved. ADEC staff conducted a site visit.

FY14 Actions:
ETM updated. Cleanup Complete Determination with Institutional Control's issued. Consultant confirmed that two groundwater monitoring wells were decommissioned.

FY15 and FY16 Projected Actions:
None

Project/Site Name: **HEA Seldovia Power Plant**
Location: Seldovia
Project Manager: Paul Horwath
Primary RP: Homer Electric Association

Hazard ID Numbers: 4010
Ledger Code: 14117060

Site Management Category: RP Lead
Site type: Power Generator

Situation:
Diesel fuel contamination was identified at this site in the adjacent road right-of-way during installation of public water mains. In 2005, contaminated soil was excavated and removed to the extent practical, however groundwater contamination remained. Long term groundwater quality monitoring continued until the summer of 2014.

FY13 Actions:
Groundwater quality monitoring occurred in FY13.

FY14 Actions:
Groundwater quality monitoring occurred in FY14. Groundwater quality improved such that groundwater sampling and monitoring was no longer necessary. The groundwater monitoring wells were properly decommissioned.

FY15 and FY16 Projected Actions:
- No further actions projected.

Project/Site Name: **HIPAS Observatory**
Location: Fairbanks Hazard ID Number: 25570
Project Manager: James Fish Ledger Code: 14305660
Primary RP: University of California, Los Angeles (UCLA), University of Alaska

Site Management Category: RP Lead
Site type: Other

Situation:
This site was first developed as a radio astronomy observatory (known as Chena Valley Radio) in the 1960's, by the University of Alaska Fairbanks (UAF) Geophysical Institute, and included a bunkhouse, a garage, and several antennae arrays. Additional development occurred in the 1980s when UAF entered into a joint venture with The University of California, Los Angeles (UCLA) to form the High Power Aurora Stimulation (HIPAS) Observatory. A lease was developed with UCLA in 1985 and the HIPAS facility expanded to approximately 10 buildings and a more than a dozen antennae arrays. Grant-funded research diminished by 2006, and final research was terminated in 2008.

As steps towards terminating the lease, UCLA conducted a Phase I Environmental Assessment in 2008, drum and containerized waste removal in 2009, and equipment, structure, and materials auctions in 2010 and 2011. This included the removal of surface debris and an asbestos-containing exhaust stack for a large electrical generator. A site-wide environmental characterization was conducted in 2010, and final decommissioning and cleanup activities were conducted in 2011 and 2012. At DEC's request, additional site assessment was conducted in 2013 to address exposure pathways where information was lacking.

FY13 Actions:
During this time, the RP removed building structures, generators, tanks, materials, and equipment from the site for reuse/auction or disposal. Removal efforts included drums and containers of petroleum and glycol, transformers and capacitors that contained PCB-containing oil, and a liquid mercury reflecting surface telescope (containing mercury). Petroleum characterization and contaminated soil removal was completed at multiple source/spill locations, including a Laser Radar (or LIDAR) garage (AST, front-end loader spill, drum, and surface stains), LIDAR building heating oil tank, LIDAR transformer release, boneyard area transformer shed, boneyard area surface stain, generator building pedestals and floor, and driveway/parking area surface stains. Mercury contamination in soil was characterized and removed from beneath the LIDAR tower foundation. Four septic tanks were also sampled, pumped, and removed. A buried crib was removed and other buried piping and soil absorption systems were abandoned in place. Five drinking water wells were decommissioned.

FY14 Actions:
Additional soil sampling for PCBs, soil gas collection for mercury, sampling for semi-volatile organic compounds (SVOCs) at former septic locations, and an evaluation of risk was conducted. ADEC determined there is no unacceptable risk to human health or the environment. The site was issued a Cleanup Complete - ICs determination, subject to the following: 1) Any future change in land use may impact contaminant exposure assumptions and must be reported to ADEC, and 2) A Notice of Environmental Cleanup (deed notice) shall be recorded in the State Recorder's Office by ADEC that identifies the nature and extent of previous contamination at the property.

FY15 and FY16 Projected Actions:

Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Hughes School & Community Tank Farm**
Location: Hughes
Hazard ID Number: 2645
Project Manager: Melinda Brunner
Ledger Code: 14203780
Primary RP: Alaska Department of Natural Resources

Site Management Category: State Owned

Site type: Bulk Fuel Storage

Situation:
Four bulk fuel storage tanks at the school (State property managed by DNR) and one on City property were damaged in the 1994 and 2006 floods, releasing petroleum products. The school tank farm was connected to the City's tank and two generator buildings via distribution piping. The school tank farm was decommissioned in 2006, and the City tank was abandoned in place in 2005. Results from Phase I and Phase II environmental site assessments in 2008 confirmed petroleum contamination in the soil above DEC's cleanup levels at the decommissioned school tank farm and City tank, along the distribution piping, and at the former generator building locations. The Yukon River Inter-Tribal Watershed Council performed a limited soil removal in 2012 on the City property at the two former generator building locations and along part of the distribution piping. Contamination above cleanup levels remains in the soil at all the locations identified during the 2008 sampling.

FY13 Actions:
No work occurred in FY13.

FY14 Actions:
Work included contract development, shareholder coordination, and workplan development in support of the proposed removal and treatment of approximately 1,075 cubic yards of contaminated soil from the former school tank farm and distribution piping. Work also included the removal of the tanks from the school site so that the contaminated soil under the tanks could be accessed.

FY15 and FY16 Projected Actions:
No action planned.

Project/Site Name: **Huslia Huntington School Aboveground Storage Tanks**
Location: Huslia
Hazard ID Number: 23
Project Manager: Melinda Brunner
Ledger Code: 14228380
Primary RP: Yukon Koyukuk School District

Site Management Category: State Owned

Site type: Bulk Fuel Storage

Situation:
A vapor intrusion assessment at the school in 2008 found petroleum-related contaminants in indoor air concentrations above DEC's targets. In 2010 DEC removed approximately 1,230 cubic yards of petroleum-contaminated soil from the site of associated with four underground storage tanks and the decommissioned aboveground storage tank farm. The soil was placed at the Old Huslia Landfill for landfarming.

FY13 Actions:
Work included contract development, stakeholder coordination, workplan development, and sampling the landfarmed soil at the Old Huslia Landfill to determine if contaminant concentrations had dropped sufficiently to allow spreading.

FY14 Actions:
Work included contract development, shareholder coordination, workplan development, stockpile spreading, and vapor intrusion assessment at the school.

FY15 and FY16 Projected Actions:
No action planned.

Project/Site Name: **Icy Bay West Uplands Fuel Depot**
Location: Yakutat
Hazard ID Number: 3861
Project Manager: Danielle Duncan
Ledger Code: 14346460
Primary RP: State of Alaska Department of Natural Resources

Site Management Category: CSP Lead

Site type: Log transfer facility

Situation:
The Icy Bay West Uplands Fuel Depot has remaining petroleum contamination related to its long history of timber harvest activities and is part of a larger site (The Icy Bay-West Camp #1). These facilities have been used in connection with timber harvest activities continuously from 1968 until present. The Icy Bay-West Camp #1 facilities include camp, vehicle maintenance, road, airport, fuel storage and dispensing, log sort yard and storage, and related facilities. These facilities were used by several different purchasers of timber from the State of Alaska Department of Natural Resources (DNR) to support their logging activities on State of Alaska lands (including lands conveyed to Alaska pursuant to the Alaska Mental Health Enabling Act).

Witnessed events of petroleum contamination in 2001 led to the development, ADEC approval, and execution of a Site Characterization Plan by Southeast Management Services. Site characterization was performed in 2002 and documented in a three volume Final Site Characterization Report prepared in 2003. A Remedial Work Plan was prepared by DMC Technologies in March 2003 and approved by ADEC in May 2003. Remedial work commenced June 2003 and was completed September 2003. All work performed was completed under approved ADEC documentation.

FY13 Actions:
None

FY14 Actions:
Due to remaining contamination existing at the uplands fuel depot specifically, multiple RPs were contacted. The case was referred to the Department of Law in June of 2014 and because of a previous agreement between DEC, DNR, and the timber purchasers, and the fact that the remaining contamination is stable and at depth, there is no viable RP to address this issue. As a result, a deed notice and institutional controls will be put into place.

FY15 and FY16 Projected Actions:
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Jewel Lake Dry Cleaners - Lot 12B**
Location: Anchorage
Project Manager: Evonne Reese (IC Unit)
Primary RP: Colin Lua

Hazard ID Number: 25895
Ledger Code: 14117760

Site Management Category: RP Lead

Site type: Laundry/Dry Cleaner

Situation:
The Former Jewel Lake Dry Cleaners Lot -12B site is located east of the Jewel Lake Dry Cleaners Lot - 13B, a known contaminated site. Surface releases of tetrachloroethene occurred from the Jewel Lake Dry Cleaners in two locations, one at lot 13B and one at Lot 12B, that resulted in contamination in both surface and subsurface soil as well as groundwater. Lot 12B was subdivided into three new lots: 12B-1, 12B-2, and 12B-3. The lot that remains impacted is the new Lot 12B-2.

Three hundred thirty-seven (337) cubic yards of PCE contaminated soil was excavated from the site in 2011 and disposed offsite at a hazardous waste landfill in Oregon. Confirmation soil samples collected from the base and sidewalls of the excavation contained PCE up to 221 mg/kg at 3 feet below ground surface (bgs). Soil borings and samples collected indicated the excavation was successful at removing the bulk of the contaminated soil from the spill area. Soil exceeding the Method 2 Direct Contact and Inhalation cleanup levels was covered with clean fill.

Groundwater was monitored to ensure that PCE contaminated groundwater was not migrating offsite. This property is served by the Municipality of Anchorage drinking water.

FY13 Actions:
Review of monitoring reports, complete an updated ETM ranking, issue a Cleanup Complete Determination with institutional controls and verify that a Notice of Environmental Contamination was filed on the property deed.

FY14 Actions:
Institutional control compliance review completed and the internal tracking system was set to notify IC Unit staff in 2018 that the site is due for a five-year review.

FY15 and FY16 Projected Actions:
Project Managers: please choose from the following regulatory/legal milestones considering a realistic scenario.

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name:	**Jewel Lake Dry Cleaners - Lot 13B**		
Location:	Anchorage	Hazard ID Number:	4001
Project Manager:	Evonne Reese (IC Unit)	Ledger Code:	14117761
Primary RP:	Daniel and Ann Farr		

Site Management Category: RP Lead

Site type: Laundry/Dry Cleaner

Situation:
The Former Jewel Lake Dry Cleaners Lot -13B site is located west of the Jewel Lake Dry Cleaners Lot - 12B, a known contaminated site. Surface releases of tetrachloroethene (PCE) occurred from the Jewel Lake Dry Cleaners in two locations, one at lot 13B and one at Lot 12B, that resulted in contamination in both surface and subsurface soil as well as groundwater.

PCE was detected in surface soil at levels above 18 AAC 75.342 Table B1 ingestion levels. However, the areas of soil contamination are currently capped with a concrete surface that if maintained will inhibit surface soil contact exposure.

Contaminants in groundwater have been detected above 18 AAC 75.345 Table C values. The groundwater plume is not believed to have migrated off-property to the south; or to be impacting down-gradient wells. Any proposal to install a drinking water well will require DEC review and approval. Residents in the area are serviced by the MOA city water utility.

FY13 Actions:
Institutional compliance review completed and the site record was updated.

FY14 Actions:
None

FY15 and FY16 Projected Actions:
Project Managers: please choose from the following regulatory/legal milestones considering a realistic scenario.

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Jones Point Biocells**
Location: Haines
Project Manager: Bruce Wanstall
Primary RP: Klukwan Inc.

Hazard ID Number: 25315
Ledger Code: 14800560

Site Management Category: RP Lead
Site type: Soil Remediation Operation

Situation:
During site cleanup operations in the late 1990s, an estimated volume of 6,000 cubic yards (CYs) of gasoline contaminated soil was transported from the Haines Tank Farm (HTF) site on Beach Road to a former sawmill site on Klukwan Inc property at the end of Sawmill Road near Jones Point (JP) in Haines. The property adjacent to the Chilkat River is susceptible to flooding. While attempting to collect characterization samples in 2008 the Klukwan consultant found the biocell nearly submerged in fresh water. In February 2009 DEC closed the HTF site with institutional controls and opened the Sawmill Road property as a biocell site on the department database of contaminated sites with a request that Klukwan submit a cleanup remedy for the JP site. Klukwan responded by using clean soil to construct elevated benches and installed liners and berms on them to transfer the wet contaminated soil into five biocells with drainage capture and treatments systems.

FY13 Actions:
DEC met with manager Ralph Strong and an environmental consultant at the Haines Klukwan office to inspect the five contaminated soil biocells. The covers were in good condition and drainage capture and treatment systems were well maintained. DEC requested Klukwan begin developing a long term management plan with a schedule for completion and a location for final disposal of the remediated soil when cleanup levels are met.

FY14 Actions:
Characterization analytical sampling in 2014 demonstrated that more than half the volume of soil in the JP Biocells meet petroleum cleanup levels as a result of the treatment methodology. DEC approved interim removal of the remediated soil from the upper levels of each biocell for land spreading on site. DEC approved a Stockpile Management and Sampling Plan for Klukwan to continue the current regimen of draining water from the biocell collection systems and treating the water before discharge on-site. A critical part of the plan is maintaining the membrane covers to keep the soil dry so that natural-occurring microbes thrive on breaking down the petroleum contamination. The remaining volume of contaminated soil estimated at 836 cubic yards of soil in five separate biocells.

FY15 and FY16 Projected Actions:

- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Final Reporting under 18 AAC75.380

Project/Site Name: **Jualpa Tunnel**
Location: Juneau
Project Manager: Sally Schlichting
Primary RP: City and Borough of Juneau

Hazard ID Number: 406
Ledger Code: 14256460

Site Management Category: RP Lead
Site type: Mining Operation

Situation:
The site is a tunnel formerly used as underground sluice for gold extraction, but is now used to transport drinking water from the municipal well field to the distribution system. In 1987, metallic mercury was observed on the tunnel floor.

Measures used to mitigate the risk of exposure of the drinking water supply to the raw mercury were placement of an impervious liner and concrete to cover sediment on the floor of the tunnel. In 1992, a concrete bulkhead was built at the upper end of the lower tunnel sealing in the riffle blocks and acting as a barrier to limit contact between mercury in the upper tunnel and the drinking water in the lower tunnel. A high density polyethylene pipe transports water through the upper tunnel to assure contact with drinking water and the mercury laden sediments in the upper tunnel.

Seepage water collects in the upper tunnel and has contact time with raw mercury in the sediments. This water is discharged from a pipe directly into Gold Creek at the terminus of the Jualpa Tunnel. Analysis of sediment and water by ADEC detected low levels of mercury in sediments but not in the water itself.

FY13 Actions
ADEC requested a final investigation be conducted of the lower Jualpa Tunnel by the City and Borough of Juneau.

FY14 Actions
In July 2013, CBJ submitted a report of sampling and investigation work and recommended no further action for the site. In June of 2014, DEC issued a cleanup complete determination with institutional controls to ensure that the engineering measures in place to control exposure are routinely inspected and maintained.

FY15 and FY16 Projected Actions:
None. The site is closed with institutional controls, with reporting required by CBJ on a five-year basis.

Project/Site Name: **Juneau Airport Fuel Facility**
Location: Juneau Airport Hazard ID Number: 2987
Project Manager: Bruce Wanstall Ledger Code: 14646760
Primary RP: Chevron Environmental Management Company

Site Management Category: RP Lead
Site type: Airport/Airfield

Situation:
In 1998, following a brief period of operation by Delta Western, the former Chevron bulk fuel above ground storage tanks (ASTs) were dismantled and removed from a 0.25 acre portion of the eight acre commercial fuel storage facility located on a northern branch of the Juneau International Airport (JIA). Delta Western's new bulk fuel facility is located 100 feet to the southeast. Adjacent to the new Delta Western facility, Aero Services operates three ASTs. Two inactive ASTs are also present and most of the surface of the facility is bare soil with little or no fuel spill containment capacity. Subsurface soil and groundwater are contaminated by historical release of gasoline and diesel fuel from facility operations dating back to land use as a U.S. Army Base. The cleanup process has seen numerous site investigations, limited interim removals of contaminated soils, and an in-situ groundwater remediation system operated by Chevron since 2007, now dismantled. The final phase of the cleanup process monitoring low concentrations of weathered petroleum constituents is at or near its end.

FY13 Actions:
A DEC letter dated May 12, 2014 approved analytical data from sampling groundwater in 2013 from well MW-4 submitted in a report by a qualified Chevron consultant. The report documents a history of sampling data and concludes that groundwater contamination has reached levels acceptable for regulatory site closure with institutional controls (ICs) on the property. The DEC approval letter supports the report conclusion and suggests the appropriate ICs include standard conditions for a contaminated site (controlling any off-site transport of soil and/or groundwater) and, in addition, a restriction that the installation of wells to access and use groundwater be coordinated with the Contaminated Sites Program. The letter was copied to the JIA Manager. The City and Borough of Juneau is tasked with determining if the ICs are consistent with future land use and the Airport Management Plan.

FY14 Actions:
In May, 2014, DEC held a telephone discussion with JIA Manager Patty deLaBruere concerning institutional controls on the property stated in the May 12th letter to Chevron concerning closure of the site and interests of the facility operators. In an email to Chevron, DEC stated: Based on information currently available, DEC approves Chevron dismantling the solar panel ozone injection system at MW-4 on the JIA Fuel Facility property.

FY15 and FY16 Projected Actions:

- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380
- Settlement Agreement / Compliance Agreement Negotiation

Project/Site Name: **Juneau School District Central Office**
Location: Juneau
Project Manager: Danielle Duncan
Primary RP: Juneau School District

Hazard ID Number: 25413
Ledger Code: 14273160

Site Management Category: CSP Lead

Site type: Commercial/retail/office

Situation:
The site was reported to PERP on July 31, 2008 after Admiralty Construction discovered holes in the old fuel tank (650 gallon) and soil contaminated with diesel fuel. Admiralty Construction pumped approximately 10 gallons of free product from the excavation pit. Juneau School District (JSD) contracted with NORTECH to assist with the cleanup of contaminated soil. Approximately 10 tons of contaminated soil was removed by Admiralty Construction in the footprint of the old tank. The excavated soil was taken to Bicknell's asphalt batch plant operation for recycling. Further characterization and excavation by NORTECH documented that additional contamination well above cleanup criteria remained at the site, but the excavation was backfilled under PERP direction prior to receipt of the sample results, and the adjacent parking lot was subsequently paved. Because contamination was left in place, the site was transferred from PERP to CS where it was added to the contaminated sites database.

FY13 Actions:
None

FY14 Actions:
In 2013, CS staff requested JSD document current site conditions. Based on additional sampling, concentrations of DRO had decreased significantly (approximately 75%), from about 40,000 ppm to 10,000 ppm. Soil sample results indicated that DRO contamination above direct contact/ingestion cleanup levels remains in a six-inch lens at approximately 4-6 ft. below ground surface, and is estimated at less than three cubic yards in volume. Although this residual contamination is present, it is confined to an area that is inaccessible due to buildings and pavement and cannot be practicably excavated and removed. For these reasons, ADEC determined there is no unacceptable risk to human health or the environment as long as the contamination is properly managed. The site was closed with institutional controls including a deed notice and in the event that the area is excavated or exposed for other work, the school district will be required to address the contamination.

FY15 and FY16 Projected Actions:
None: cleanup complete with institutional controls.

Project/Site Name: **Juneau Airport Travelodge**
Location: Juneau
Project Manager: Evonne Reese
Primary RP: David Allison

Hazard ID Number: 4517
Ledger Code: 14653760

Site Management Category: RP Lead
Site type: Other

Situation:
The Travelodge Hotel is located on a 90,000 square foot property located in a commercial land use district new the airport. In September 2000, diesel oil from a leaking 600-gallon underground heating oil storage tank system located on the north side of the hotel entered a storm water sewer that discharged into Duck Creek, an urban anadromous stream. The spread of oil leaking from the UST reached a sump under the hotel building that pumped shallow groundwater out of the crawlspace into piping connected to the storm water sewer. During the next several weeks, sorbent materials were used to recover oil floating on Duck Creek and the storm sewer basin. Substantial amounts of oil were recovered from the UST excavation and the crawlspace sump system under the building using an oil-water separator system.

The accessible contaminated soil was excavated and the tank and associated piping were removed from the ground. Approximately 160 cubic yards of contaminated soil were sent to the Juneau United Soil Recycling Facility where it was remediated by thermal treatment. Confirmation soil samples were taken and a polyethylene membrane was installed to limit the migration of petroleum vapors from the soil into the crawlspace air. Ambient air samples were collected to verify the effectiveness of the vapor barrier.

FY13 Actions
Issue the Cleanup Complete Determination which details the institutional controls required for this property. A Notice of Environmental Contamination was filed on the property deed and the property has been set up for a three-year review of the conditions.

FY15 and FY16 Projected Actions:
- Institutional Controls Maintenance under 18 AAC 75.375 – institutional controls will be reviewed for effectiveness every three years.

Project/Site Name: **Kaltag School Former BIA Tank Farm**
Location: Kaltag Hazard ID Number: 26101
Project Manager: James Fish Ledger Code: 14337260
Primary RP: Alaska Department of Natural Resources & Bureau of Indian Affairs

Site Management Category: State-owned
Site type: Bulk Fuel Storage

Situation:
This site is the location of a former bulk fuel tank farm constructed by the Bureau of Indian Affairs (BIA) during the early 1960s, and is located to the east of the Kaltag School. The BIA tank farm consisted of three above ground storage tanks (ASTs). They were apparently in use by the Kaltag BIA School, presumably until the BIA school burned and was replaced with the existing school in 1976. Additional tank farms, including a former Alaska Village Electric Cooperative (AVEC) tank farm, and a former Yukon-Koyukuk School District (YKSD) tank farm, have occupied the same gravel pad south of the Kaltag School. It is unclear when the former YKSD tank (located south of the school) was constructed, and whether the YKSD and new (existing) Kaltag School utilized the BIA Tank Farm. The BIA tank farm is identifiable in an aerial photograph of 1980, with no other apparent tank farms located near the school.

Residents of Kaltag informed ADEC in 1991 that oil seeps were appearing every spring at the Kaltag School. Probable sources of this contamination include all the nearby former tank farms, as well as overfills and releases during fuel handling activities. Site characterization performed by ADEC's contractors have indicated the greatest concentration of petroleum contamination in soil is located at the former BIA tank farm area, and is likely one of the most significant sources of contamination to groundwater and surface seeps near the school.

The YKSD constructed teacher housing on the site of the former BIA tank farm in 2008. A new contaminant (1-Chloro-octadecane) was also found during soil screening and sampling during October, 2010 at the former BIA tank farm, and surrounding locations near the school.

FY13 Actions:
During FY13, ADEC conducted a potentially responsible party (PRP) search and records review for the former BIA Tank Farm. During this same time, ADEC's contractor also developed an extensive soil cleanup plan for the Kaltag School (under the Kaltag School Oil Seep site).

FY14 Actions:
During FY14, ADEC continued to engage the BIA as a PRP for multiple sites in rural Alaska, including Kaltag. The former BIA Tank Farm in Kaltag was omitted from cleanup efforts planned for the Kaltag School during FY15-16 until PRP issues are resolved.

FY15 and FY16 Projected Actions:

Settlement Agreement / Compliance Agreement Negotiation

Project/Site Name: **Kaltag School oil Seep**
Location: Kaltag
Project Manager: James Fish
Primary RP: Alaska Department of Natural Resources

Hazard ID Number: 289
Ledger Code: 14937680

Site Management Category: State Owned
Site type: School

Situation:
Past remedial efforts (soil excavation, bio-cell treatment, and a seepage filtration system) in Kaltag have addressed oil seepage appearing each spring at the Kaltag School and surrounding roads. The former Yukon Kuskokwim School District (YKSD) tank farms, and the AVEC former tank farm, have consistently contained the greatest quantities of petroleum-contaminated soils, and presents a significant source area for supra-permafrost groundwater contamination near the school. Past reconnaissance reported storage of electrical equipment and presence of stained soil at the former YKSD tank farm, and the leaking of PCB compounds was suspected. However, subsequent site investigations found additional petroleum contamination as 1-chloro-octadecane, instead of PCBs. The conceptual site model indicates that dermal absorption and incidental ingestion continue to be exposure pathways to petroleum contaminants from soil, and seepage of petroleum sheen periodically occurs during spring break-up. This project will result in a site cleanup, where hot-spots of petroleum-contaminated soils will be excavated and remediated by land farming and phytoremediation.

FY13 Actions:
Work in FY13 consisted of additional development of an extensive soil cleanup plan. A reimbursable services agreement (RSA) was also established with the University of Alaska, Fairbanks (UAF) to conduct laboratory treatability studies using native willow trees to stimulate the biodegradation (via phytoremediation) of petroleum-contaminated soils from Kaltag.

FY14 Actions:
The final cleanup plan involving both traditional land farming and phytoremediation was approved and awarded to a term contractor during FY14, and two stakeholder meetings were held: one via teleconference, and one in Kaltag with the Tribal Council, City of Kaltag, community members and ADNR.

FY15 and FY16 Projected Actions:

Site Cleanup under 18 AAC 75.360

Project/Site Name:	**Kanakanak Hospital IHS**		
Location:	Kanakanak	Hazard ID Number:	682
Project Manager:	Meredith Savage	Ledger Code:	14870160

Primary RP: U.S. Department of Health & Human Services, Indian Health Services

Site Management Category: RP Lead
Site type: Petroleum, non-crude

Situation:
The Indian Health Service (IHS) hospital grounds have been contaminated in multiple areas by fuel releases from aboveground fuel storage tanks, underground storage tanks, and a fuel distribution system. Soil and groundwater contamination were first encountered during construction of a new hospital building in 1985 and additional areas of contamination were discovered through 1991. Remedial actions started in 1993 and continue through current time. Site cleanup has focused on the excavation of fuel contaminated soils followed by land-farming treatment. Groundwater monitoring wells have been installed throughout the hospital site grounds and are on a regular monitoring schedule. Vapor intrusion monitoring is also regularly conducted. The site is currently divided into 11 areas of concern. Cleanup complete with institutional controls determination given for Area 1 in November of 2009; cleanup complete with institutional controls requested for Areas 2, 6, and 7; remedial action ongoing in Areas 3, 4, 5, 8, 9, and 11; Area 10 is being used for land-farming of excavated contaminated soils.

FY13 Actions:
Site work consisted of vapor intrusion monitoring, groundwater monitoring, and soil sampling. DEC oversight activities included reviewing and approving work plans and reports for these activities.

FY14 Actions:
Site work included UVOST (Ultraviolet Optical Screening Tool) soil characterization and soil sampling, installation of an additional groundwater monitoring well and subsequent sampling. DEC oversight activities included reviewing and approving work plans and reports for these activities, and teleconference meetings with IHS, tribal, Native Corporation, and contractor representatives.

FY15 and FY16 Projected Actions:
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Site-specific analysis under 18 AAC 75.340 (i)(2)
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name:	**Kasigluk-Akiuk Old BIA School Tank Farm**		
Location:	Kasigluk, AK	Hazard ID Number:	25502
Project Manager:	Keri DePalma	Ledger Code:	14284880
Primary RP:	Lower Kuskokwim School District		

Site Management Category: State Owned

Site type: Bulk Fuel Storage

Situation:
The Old BIA School tank farm is located within 40 feet of the current high school. The tanks were used by the school before a new tank system was installed. There are seven 10,000-gallon tanks in the tank farm which were installed in 1952. The Bureau of Indian Affairs (BIA) conveyed the land to the State Department of Education in the 1980s, and the Lower Kuskokwim School District is the caretaker for the site. Although there are no documented releases from the tank farm, historical releases have occurred and the school district identified this site as one of its worst sites with petroleum vapors reported in the school by teachers and students. During the spring, the water reaches the tanks and any historical seeping that has occurred over the years impacts the lake which is within two to three feet of the tank farm. All of the tanks are listing. A Property Assessment and Cleanup Plan (PACP) was completed for the site in 2011. The PACP includes sampling results showing petroleum hydrocarbon concentrations above DEC cleanup limits.

FY13 Actions:
Work involved preparing the tank farm site for assessment through the removal of tanks and a limited amount of debris.

FY14 Actions:
Work included the sampling of soil and water to better delineate the extent of contamination, creation of a revised conceptual site model, and final reporting.

FY15 and FY16 Projected Actions:
Site Characterization under 18 AAC 75.335 (IDW disposal)

Project/Site Name: **Kenai Fire Training Site (MAPTS)**
Location: Soldotna
Project Manager: Bill O'Connell
Primary RP: University of Alaska

Hazard ID Number: 454
Ledger Code: 14945560

Site Management Category: RP Lead
Site type: School

Situation:
Fire training activities conducted in the 1980's resulted in the release of petroleum hydrocarbons to soil and groundwater at the site. Hydrocarbon contamination has largely been cleaned up, however recent data indicates the emerging contaminants perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) are also present in groundwater at the site as a result of aqueous film forming foam being used in fire training exercises.

FY13 Actions:
The remediation of petroleum contaminated soil was nearly completed in FY 13, and PFOS and PFOA were first detected in soil and groundwater at the site.

FY14 Actions:
The remediation of petroleum contaminated soil was completed and the excavation was backfilled. Residential drinking water wells were sampled for PFOS and PFOA, which were not detected, and additional groundwater monitoring wells were installed and sampled to delineate the extent of PFOS and PFOA impacts.

FY15 and FY16 Projected Actions:

- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Kenai Gas Field Area Sites**
Location: Kenai

Hazard ID Numbers: 276, 2434, 3189, 3191, 3331, 25434
Ledger Code: 14907860

Project Manager: Paul Horwath
Primary RP: Hilcorp Alaska, Incorporated

Site Management Category: RP Lead
Site type: Oil and Gas Production Facility

Situation:
There are five (5) natural gas well drilling pads located in the Kenai Gas Field that have active contaminated sites. Natural gas condensate is the primary petroleum contaminant at these sites. Contamination is contained within the drill pads at four of these five pads. Contamination extends off-pad at Kenai Gas Field Pad 14-6. Groundwater quality monitoring is occurring at all five pads. Remedial action efforts have been completed at Pad 14-6 in the past, and additional cleanup actions are currently being evaluated for implementation at Pad 14-6 at this time.

FY13 Actions:
Work consisted of continued long term groundwater quality monitoring at all 5 pads.

FY14 Actions:
Work consisted of long term groundwater quality monitoring at all 5 pads. A feasibility study was initiated at Pad 14-6, in order to evaluate the feasibility of recovering natural gas condensate both on and off Pad 14-6.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name:	**Kenai Pipeline Bernice Creek Plume**		
Location:	Nikiski	Hazard ID Number:	1841
Project Manager:	Campbell	Ledger Code:	14962860
Primary RP:	Tesoro Alaska		

Site Management Category: RP Lead

Site type: Fuel storage/transfer facility

Situation:

Gasoline range organic compounds detected in monitoring well next to gasoline pipeline. Multiple source areas on site. Assessment work completed, active remediation/mitigation by air sparging.

FY13 Actions:

Review of annual monitoring reports.

FY14 Actions:

Review of annual monitoring reports.

FY15 and FY16 Projected Actions:

- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360

Project/Site Name: **Klag Bay Mine**
Location: Chichagof Island
Project Manager: Danielle Duncan
Primary RP: Coastal Development Corporation

Hazard ID Number: 269
Ledger Code: 14326060

Site Management Category: RP Lead

Site type: Mining operation

Situation:
The Klag Bay Mine is a remote site located approximately 50 miles NW of Sitka, AK in Klag Bay on Chichagof Island. The mine was operated by the Chichagof Mining Company from 1906-1942 where roughly 600,000 tons of gold and silver were produced using mercury amalgamation. A cyanide processing plant was also built, but it is unknown whether it was ever utilized. About 500,000 tons of waste rock was discarded near shore and on the beach during mining operations. The Klag Bay Mine was added to the Contaminated Sites database in 1999 after review of the 1986 USFWS report that documented heavy metal contamination in marine biota. The EPA conducted a START study in 1999 that confirmed metal contamination in sediments, however, the site was not added to the National Priorities List. In 2007, DEC was contacted by the Sitka Tribe and concerns were raised regarding possible contamination of subsistence resources. In 2009, the EPA accepted the TMDL proposed by the DEC which limits metal loadings in the bay and until these loads are 99% less than documented in 2009, there can be no development at the site that would contribute additional contaminant loading.

FY13 Actions:
DEC and Sitka Tribe had meetings to discuss a sampling trip to sample sediments and subsistence shellfish resources at the site.

FY14 Actions:
Continued communications between Sitka Tribe and DEC, in addition to ADFG and DNR, regarding sampling effort. A sampling and analysis plan was drafted and tentative plans are set to sample sediments and shellfish at Klag Bay in FY14. These samples will be sent to the State Veterinary Laboratory for metals and cyanide analysis. These data will be used to further characterize the site and impacts (if any) to subsistence shellfish resources.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335

Project/Site Name: **Kotzebue Airport Sewage Lagoon Drum Dump**
Location: Kotzebue Hazard ID Number: 3251
Project Manager: James Fish Ledger Code: 14230080
Primary RP: Alaska Department of Transportation and Public Facilities

Site Management Category: State-owned
Site type: Landfill/Dump

Situation:
This site is the location of a former drum cache where approximately 150 55-gallon drums were dumped and/or abandoned. EPA's Superfund Technical Assistance and Response Team (START) program conducted some soil sampling in 1998 and found and gasoline range (GRO), diesel range (DRO), and residual range organics (RRO) above cleanup levels. Some drums contained antifreeze (ethylene glycol), diesel fuel, and lubrication oil, and asphalt residue was observed on some drums and on the ground surface. The 1999 investigation also sampled nearby sediments and found petroleum contamination had not migrated to adjacent lagoons and subsistence use areas. A well search did not find any wells within the area. Drinking water in Kotzebue is obtained from Devils and Vortac Lakes, approximately 3 miles inland.

Approximately 5% of the drums investigated in 1998 were labeled with either United States Air Force or United States Navy markings. The former Long Range Radar Station (LRRS) is located approximately three miles southeast of the site. Aerial photos from August 25, 1969 indicates over 500 drums had been stacked in two at the drum dump location. A 1977 aerial photo indicates that only 10 drums from the southern drum pile remained; the northern drum pile still contained approximately 400 drums. The community of Kotzebue contends the drums were deposited by the Air Force during operations and closure of the LRRS. The Air Force contends that while the drums originally may have been Air Force property, the drums were utilized by local residents and deposited on the site after non-military use. Fish camps are present in the tent city area immediately west of the drum dump.

DEC's contractor revisited the site in 2008 & 2009 to collect pore water samples along the shores adjacent to the drum dump site, and soil samples under and adjacent to drums. No contaminants were detected above cleanup levels in pore water samples, but soils contained DRO and RRO well above cleanup levels.

FY13 Actions:
During this time, the Alaska Department of Transportation and Public Facilities (ADOT&PF) and its contractor identified Isaac Lake (adjacent to the Sewage lagoon Drum Dump) as a materials source (gravels) for expansion of the Ralph Wien Memorial Airport runway in Kotzebue. ADEC oversaw the development of plans to partially dewater Isaac Lake, construct a new materials haul road, and perform a cleanup of the Sewage Lagoon Drum Dump, so it could eventually be mined for gravel.

FY14 Actions:
During FY14, ADOT&PF contractors removed all the remaining drums from the Sewage Lagoon Drum Dump, and excavated and stockpiled contaminated soils. ADEC approved to subsequent mining of the Isaac lake Materials Site. The contaminated soils are still stockpiled, awaiting treatment either by disposal in the Kotzebue landfill, or treatment by other means (e.g., land farming)

FY15 and FY16 Projected Actions:

Site Cleanup under 18 AAC 75.360
Final Reporting under 18 AAC75.380

Project/Site Name: **Kotzebue Former IHS/BIA Hospital/School**
Location: Kotzebue Hazard ID Number: 25558
Project Manager: Kevin Gardner Ledger Code: 14282360
Primary RP: PRPs – IHS, BIA, Kikiktagruk Inupiat Corporation, Northwest Arctic Borough School District, AK DEED

Site Management Category: RP Lead
Site type: Petroleum, non-crude

Situation:

Historical spill of #1 diesel occurred between 1950 and 1980. Estimated 100,000 to 200,000 gallons spilled impacting an area up to 10 or more acres. ADEC was alerted when fuel was discovered seeping into the elementary school basement in 1980. The source or sources were undetermined but thought to be from 1) a ruptured tank at the bulk tank farm in the 1950's 2) the former distribution line from the bulk tank farm to the Kotzebue school and the former Public Health Service Hospital and 3) above and below-ground fuel storage tanks and various piping systems located at the school and hospital.

An estimated 40,000 gallons of fuel was recovered by contractors and private individuals between 1980 and 1984. LNAPL noted on the GW between 2 and 6 inches in 1986. In 1988 a visible seep of oil along the beach and sheen was noted on the Kotzebue Sound.

In 1989, ADEC installed and operated an oil recovery system, which consisted of a 435-foot barrier along of the beach to prevent oil migration into Kotzebue Sound, additional monitoring wells, and an oil recovery trench in Second Avenue, North of the former hospital.

In 2008 and 2010, pore-water sampling was completed along the beach prior to the construction of a seawall and revealed the presence of petroleum-related contamination possibly related to these fuel releases.

FY13 Actions:
Work consisted of the continuation of monthly PRP meetings in an effort to continue cost allocation discussions among the PRPs and determine the feasibility of resuming site characterization work with funding to be provided by the PRPs. However, PRPs were unable to obtain funding to complete any field work during FY13.

FY14 Actions:
PRP discussions regarding cost allocation and site characterization continued. BIA and IHS obtained funding and executed contracts for combined site characterization work scheduled to commence in August 2014. RFA and DOL assisted in preparing prior-year invoices to be mailed to PRPs in August 2014.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Final Reporting under 18 AAC75.380

Project/Site Name: **LAB Flying Service Hanger**
Location: Haines Airport
Project Manager: Bruce Wanstall
Primary RP: LAB Flying Service

Hazard ID Number: 3862
Ledger Code: 14144260

Site Management Category: RP Lead
Site type: Airport/Airfield

Situation:
Surface and subsurface soil have been contaminated by the release of diesel fuel from a leaking heating oil tank and from bulk fuel piping to the dispenser. Limited investigation and cleanup have been completed but additional soil and groundwater investigation and an active cleanup remedy are needed. An active drinking water well on the adjacent lease property is a potential exposure pathway for off-site migration of subsurface petroleum contamination. A DEC site inspection in May 2012 observed oil stains on the surface inside the hanger building from an open doorway at the back of the building facing north.

FY13 Actions:
An LAB consultant collected an analytical sample of tap water at the Wings Terminal adjacent to the LAB Flying Service Hanger at the Haines Airport. No petroleum constituents were detected in the analysis. The purpose of testing water from the well is to characterize groundwater for petroleum compounds that may have been transmitted from contaminated soil and groundwater remaining on the LAB property documented in historical site characterization reports submitted by LAB.

FY14 Actions:
In May, 2014, DEC issued a Notice of Violation to LAB Flying Service for not submitting in a timely manner a work plan requested by the department to further investigate and cleanup a release of hazardous substances on property leased from the State of Alaska at the Haines Airport. In July, 2014, LAB submitted and DEC approved, a sampling plan to characterize the site and submit a report with analytical data to DEC. The sampling is reportedly complete and a report on the results is nearly finished. Concurrently, the Alaska Department of Transportation and Public Facilities is suspending all property lease agreements and in order to dismantle all hangers at the Haines Airport to complete an area wide remodeling of the airport apron.

FY15 and FY16 Projected Actions:
The project manager anticipates that any or all of the following could be utilized in the future at this site:

- Interim Removal Action under 18 AAC 75.330
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Risk Assessment under 18 AAC 75.340 (f)
- Site-specific analysis under 18 AAC 75.340 (i)(2)
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380
- Settlement Agreement / Compliance Agreement Negotiation

Project/Site Name: **Little Red Services**
Location: Deadhorse
Project Manager: Keather McLoone
Primary RP: Little Red Services, Inc.

Hazard/Site ID Number: 1974
Ledger Code: 14882260

Site Management Category: RP Lead
Site type: Oilfield Services

Situation:
The source of contamination on this property, leased from Alaska Department of Natural Resources, was from two above ground storage tanks and heavy equipment storage. Multiple excavations have occurred including in 2000, 2001, and 2014.

FY13 Actions:
The site was reopened. ADEC reviewed a planning document to conduct additional site characterization.

FY14 Actions:
ADEC reviewed multiple planning and reporting documents. ADEC issued a Cleanup Complete decision based on the results of a 2014 removal effort.

FY15 & FY16 Projected Actions:
- None

Project/Site Name: **Little Squaw Mining Claim**
Location: Chandalar Mining District
Project Manager: Robert Burgess
Primary RP: Goldrich Mining

Hazard ID Number: 1088
Ledger Code: 14258960

Site Management Category: PRP

Site type: Mining Operation

Situation:
In 1990, a soil sample adjacent to a gravel pad at the Little Squaw Mill (also known as Tobin Creek Mill, or Woodchuck Creek Mill) indicated that the soil was contaminated with mercury. Operations at the mill site included processing of gold ore through various methods, including floating, cyanidation, and mercury amalgamation and retort. Mercury releases likely occurred from tailings scattered near the mill building. Limited sampling performed in the 1990s indicated that tailings piles contained mercury and concentrated arsenic. Cyanide was also found in some samples. In 2007-2009 additional sampling for mercury took place, with the highest mercury concentrations being found adjacent to Woodchuck Creek. In 2013, contact with the RP was reestablished. Goldrich hired Travis/Peterson Environmental Consulting, Inc. (TPECI) to perform work at the site. TPECI consolidated information regarding sampling, processing and operations at the site, and other pertinent information, and is working with DEC and DNR, the landowner, to put together a workplan for additional assessment and cleanup.

FY13 Actions:

FY14 Actions:
Work included identifying the PRP and evaluating land ownership, in addition to meeting with DNR, Goldrich, and TPECI to discuss data gaps, characterization, ownership, and cleanup. The role of ADEC was to review deliverables, make decisions on cleanup levels, and provide a regulatory framework for the consultants.

FY15 and FY16 Projected Actions:

- Interim Removal Action under 18 AAC 75.330
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **M&M Enterprises – Wyoming Drive**
Location: Anchorage
Project Manager: Eileen Olson
Primary RP: Max LaMoureaux
Hazard ID Number: 303
Ledger Code: 14670960

Site Management Category: CSP Lead
Site type: Salvage/Recycling/Wrecking Yard

Situation:
The site was used for recycling of batteries and scrap metal and came to ADEC's attention in 1990 following a neighbor's report of sulfuric acid draining off of the property. Initial documentation of contamination is found in a December 1991 site assessment that documented elevated levels of lead and petroleum hydrocarbons in soil and groundwater. In 2003, ADEC requested that the property owner address the contamination; the owner did not have sufficient funds to conduct the work but granted access to ADEC to perform the assessment. ADEC's term contractor later identified hazardous waste levels of lead in soil samples and mercury and trichlorobenzene in soil above applicable cleanup levels. Four groundwater monitoring wells were installed in 2004 with no contaminants or metals documented above detection levels, although the metals detection levels were above the cleanup levels. In 2005 ADEC's term contractor removed and disposed of out of state about 372 tons of lead-contaminated soil to reduce the risk at the site. The contaminated soils between depths of 1.5 and 8 feet were replaced by clean fill. In 2012 an ADEC term contractor improved the drainage and consolidated the remaining contaminated soil in one area, within a retaining wall made of railroad ties and capped by clean soil. Following June 2013 inspections by ADEC, the term contractor and the Municipality of Anchorage (MOA), the landowner signed the "satisfactory completion of work form" specified under his October 2009 Agreement with ADEC.

FY13 Actions:
In August 2013 ADEC received the "satisfactory completion of work form" signed by the landowner required as a condition of the October 2009 Agreement between the landowner and ADEC. The ADEC project manager recommended that the site receive cleanup complete with institutional controls (ICs) status; the ICs would include a requirement for long-term monitoring of the four monitoring wells at the site and periodic inspection and maintenance of the existing asphalt cap. On May 12, 2014 ADEC staff observed site conditions from roadway and reported that the site was adequately maintained; that is, site conditions were unchanged from 2013.

FY14 Actions:
No state funding is available for long-term groundwater monitoring of the four monitoring wells at the site, therefore the site has not yet been closed with ICs as recommended by former project manager.

FY15 and FY16 Projected Actions:
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name:	**Mahoney Zinc Mine USFS**		
Location:	Ketchikan	Hazard ID Number:	3730
Project Manager:	Anne Marie Palmieri	Ledger Code:	14878560
Primary RP:	United States Forest Service		

Site Management Category: RP Lead
Site type: Former Mine and Mill

Situation:
The USFS Mahoney Zinc Mine is located on a remote part of Revillagigedo Island on US Forest Service-managed Tongass National Forest lands. The mine operated between the early 1900s and 1949. Mine tailings containing elevated concentrations of lead, cadmium, and zinc extended from the former mill site to the marine water. The US Forest Service conducted limited removal actions in 2003 and 2008 to remove portions of the tailings, however additional tailings remain. The US Forest Service proposed conducting a risk assessment at the site to determine if the remaining tailings pose a risk to human and/or ecological receptors prior to conducting additional cleanup.

FY13 Actions:
Staff reviewed and commented on the draft risk assessment work plan, and worked with the US Forest Service to resolve those comments. A risk assessment work plan was approved.

FY14 Actions:
Staff reviewed and commented on the draft risk assessment report, and worked with the US Forest Service to resolve those comments.

FY15 and FY16 Projected Actions:

- Site Cleanup under 18 AAC 75.360
- Risk Assessment under 18 AAC 75.340 (f)

Project/Site Name: **Manley Hot Springs Gravel Pit**
Location: Manley Hot Springs
Project Manager: Eileen Olson
Primary RP: Bean Ridge Corporation

Hazard ID Number: 290
Ledger Code: 14982860

Site Management Category: CSP Lead
Site type: Sand/Gravel/Borrow Pit

Situation:
Soil contamination by 2,3,7,8-TCDD and 2,3,7,8- tetracholor-dibenzofuran (2,3,7,8 – TCDF) from banned herbicides was identified in site soil following the discovery in 1989 of three orphan drums on land above the Manley gravel pit. Under a state lead project, in consultation with EPA, and by agreement with the landowner, Bean Ridge Corporation, herbicide contamination was characterized in 2012 and n 2013 the contaminated soil was consolidated and capped with clean fill within an approximately 45 ft. by 55 ft. area that was temporarily fenced in September 2013 and is scheduled to be fenced with chain-link fencing under a state lead project in 2014.

FY13 Actions:
Staff approved a revised 2012 corrective action plan to excavate, cap, and fence the remaining contaminated area. The work was completed in October 2013 including placement of temporary polyethylene construction fencing. A permanent fence was not installed because unauthorized earthwork had taken place prior to ADEC's term contractor arriving at the site, so that additional sampling and corrective measures were required. These included consolidation of the dioxin-containing soil in one area, and the addition of a clean soil cap that was then seeded.

FY14 Actions:
ADEC issued an RFP for installation of a permanent (20-year) chain-link fence to be placed by fall 2014 around the capped and vegetated area containing dioxin-contaminated soil.

FY15 and FY16 Projected Actions:
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **MarkAir- King Salmon**
Location: King Salmon
Project Manager: Bill O'Connell
Primary RP: ADOT&PF

Hazard ID Number: 1879
Ledger Code: 14803580

Site Management Category: State Owned
Site type: Airport/Airfield

Situation:
This ADOT&PF Lease Property has been impacted by various spills and releases from the former Mark Air facility. These releases impacted soil and groundwater, resulting in significant free product on the surface of the groundwater and a dissolved phase hydrocarbon plume that his migrated off the subject property to the southwest, and is suspected of impacting the drinking water well at the KingCo Inn on an adjacent property.

FY13 Actions:
Work consisted of groundwater monitoring and continued recovery of free product.

FY14 Actions:
Work consisted of groundwater monitoring and continued recovery of free product.

FY15 and FY16 Projected Actions:

- Site Cleanup under 18 AAC 75.360

Project/Site Name: **MOA Maintenance Fac**
Location: Anchorage
Project Manager: Meghan Dooley
Primary RP: MOA

Hazard ID Number: 3305 and 25942
Ledger Code: 14261360

Site Management Category: RP Lead
Site type: Maintenance Yard/Shop

Situation:
Two sites associated with this LC. DRO and RRO contaminated soil was observed in two areas of staining at the Northwood Drive Maintenance Facility. Sources are unknown and characterization was conducted to determine the nature and extent of contamination. At Garage Bay 6, a dry well and associated contaminated soil was encountered during installation of an oil water separator. Seven samples were collected and GRO, DRO, and PAH were encountered above cleanup levels. 110 tons of soil were removed and treated offsite.

FY13 Actions:
ADEC received the 2001 report for removal of the former dry well. ADEC requested a work plan to determine if groundwater was impacted.

FY14 Actions:
None.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name: **MOA Parcel 3 Track B Muninc Indust Subdivision**
Location: Anchorage
Hazard ID Number: 4714
Project Manager: James Fish
Ledger Code: 14931660
Primary RP: MOA

Site Management Category: RP Lead
Site type: Unknown

Situation:
A Phase II ESA revealed petroleum, metals, and PCB contamination in 2008. The source was likely soil brought to the site to fill a former gravel pit. Site characterization as conducted to determine the extent of contamination. A site cleanup plan was developed and approved to remove PCB contaminated soil greater than 10 mg/kg.

FY13 Actions:
ADEC received the Remediation Construction Completion Report in August 2012. The report documented the offsite disposal of all PCB contaminated soil greater than 10 mg/kg. A cell lined with geo-membrane at the base of the excavation was created for soil with PCBs between 1 and 10 mg/kg. The rest of the excavation was backfilled with at least 3' of soils containing 1 mg/kg or less of PCB.

FY14 Actions:
None

FY15 and FY16 Projected Actions:

- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **MOA Third Addition Block 39 Lot 15**
Location: Anchorage
Project Manager: Eileen Olson
Primary RP: Municipality of Anchorage
Hazard ID Number: 25276
Ledger Code: 14330460

Site Management Category: RP Lead
Site type: Residence

Situation:
On July 22, 2008, DRO-contaminated soil was discovered related to an underground heating oil tank encountered during a road improvement project. The tank was associated with a former residence at what is now a green belt. The tank was removed and contaminated soil was excavated and stockpiled. DRO concentrations remain in soil at levels exceeding the 18 AAC 75.341 soil cleanup levels close to the soil/groundwater interface.

FY13 Actions:
ADEC requested copies of the MOA's consultant's field notes and additional site characterization including monitoring well installation in letters dated January 16, 2013 and April 12, 2013. The MOA has not performed any of the requested work or provided the requested field notes.

FY14 Actions:
None.

FY15 and FY16 Projected Actions:
Site Characterization under 18 AAC 75.335

Project/Site Name: **Monarch Mine USFS**
Location: Girdwood
Project Manager: Anne Marie Palmieri
Primary RP: United States Forest Service

Hazard ID Number: 26179
Ledger Code: 14343460

Site Management Category: RP Lead
Site type: Former Mine and Mill

Situation:
The USFS Monarch Mine is located on the Crow Pass Trail north of Girdwood on US Forest Service-managed Chugach National Forest lands. This site includes the former Monarch, Brenner, and Jewel gold mines and mills which operated from 1909 to the 1940s. The US Forest Service conducted a preliminary reconnaissance and sampling event and found elevated concentrations of metals in tailings which extended into a creek. The Crow Pass Trail is a highly valued and well-used recreational area.

FY13 Actions:
None.

FY14 Actions:
The US Forest Service notified DEC that tailings with elevated concentrations of metals are present at the site. Staff reviewed information provided by the US Forest Service and participated in a technical scoping meeting for the development of an Engineering Evaluation/Cost Analysis and Risk Assessment. Staff reviewed and provided comments on the work plan documents in preparation for field work to be conducted in mid-July 2014.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Risk Assessment under 18 AAC 75.340 (f)

Project/Site Name: **Napa Auto Parts**
Location: Fairbanks
Project Manager: Janice Wiegers
Primary RP: RSD Van Horn LLC

Hazard ID Number: 25865
Ledger Code: 14311960

Site Management Category: RP Lead
Site type: Commercial/Retail/Office

Situation:
On May 26, 2011, a fire consumed the NAPA Auto Parts store and warehouse located at 1937 Van Horn Road in Fairbanks. Water and foam sprayed on the building during firefighting efforts acted as a transport mechanism to carry hazardous materials across the paved parking lot to adjacent properties. Hazardous materials included oil, grease, lubricants, glycols, solvents, paint, and batteries. An initial response was conducted however, product continued to migrate from the building into adjacent soils. An assessment conducted by the responsible party's environmental consultant concluded that product weeping from the building would be contained in the porous soils underneath the building and later be removed during the building demolition process. Grossly contaminated soils from adjacent properties were removed and stockpiled on site until later disposal at OIT. A site characterization, including groundwater investigation, was conducted to determine the extent of remaining contamination. Although the burned building was demolished in 2011, the slab was left in place and a new building was constructed on it.

FY13 Actions:
Excavation around the building slab was completed and a vapor removal system was installed. Excavations were filled in and all wastes were disposed of except for a pile of recycled asphalt product.

FY14 Actions:
A plan for monitoring groundwater, conducting additional assessment at the corners of the former building, and assessing the effectiveness of the vapor intrusion system was developed. DEC was notified that an addition was built on the southern side of the new building.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater Monitoring under 18 AAC 75.345
- Site-specific analysis under 18 AAC 75.340 (i)(2)
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Nome Airport Expansion**
Location: Fairbanks
Project Manager: Janice Wiegers
Primary RP: ADOT & PF - Fairbanks

Hazard ID Number: 25478
Ledger Code: 14282580

Site Management Category: State Owned
Site type: Airport/Airfield

Situation:
The Nome Airport Expansion Project addresses FAA requirements that all runways meet certain safety standards. To meet these standards ADOT&PF must expand the runway at the Nome airport. Relocation of the Snake River is was considered as an alternative to allow for runway expansion, which involved moving mine tailings from disturbed areas around the Snake River and addressing some associated contaminated sites, such as the Novagold Barrel Dump. DEC participated in scoping meetings and provided comments to various plans.

FY13 Actions:
DOT characterized and cleaned up Novagold Barrel Dump under oversight by DEC. DOT developed stockpile management plan for mine tailings.

FY14 Actions:
DEC continues to work with DOT on stockpile management for mine tailings, and with permitting.

FY15 and FY16 Projected Actions:

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **NORCON Inc. King Street and 100th Avenue**
Location: Anchorage
Hazard ID Number: 4162
Project Manager: Bill O'Connell
Ledger Code: 14199560
Primary RP: NORCON Inc.

Site Management Category: RP Lead
Site type: Commercial/Retail/Office

Situation:
Results from a Phase II investigation in 2005 found petroleum contamination in soil and groundwater from unknown source areas. The property was sold to Target Corporation in 2007 who subdivided the property and built a Target retail store and parking lot. A Cabelas retail store was built on one of the subdivided parcels in 2014.

FY13 Actions
The nature and extent of hydrocarbon contamination in soil and groundwater was delineated in FY 2013

FY14 Actions
Groundwater monitoring indicated the groundwater plume was stable, and contaminant concentrations were shown to be only slightly above cleanup levels. The site was closed with institutional controls in April 2014.

FY15 and FY16 Projected Actions:
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Northeast Cape NALEMP Fish Camp**
Location: Northeast Cape, Saint Lawrence Island Hazard ID Number: 25681
Project Manager: Curtis Dunkin Ledger Code: 14315160
Primary RP: Native Village of Savoonga (NVS)

Site Management Category: RP Lead
Site type: Military Installation – Base/Post/Other

Situation:
In 2009, the NVS conducted a site assessment of the Northeast Cape (NEC) Fish Camp under the Native American Lands Environmental Mitigation Program (NALEMP). The Fish Camp site has historically been and continues to be used by residents of Saint Lawrence Island as a temporary residence and staging site for conducting subsistence harvest activities. The 2009 site assessment results confirmed the presence of asbestos and lead containing materials and also identified soils, groundwater, and surface waters that may be contaminated with multiple contaminants of concern including petroleum, PCBs, VOCs, and metals. The NVS conducted an Interim Removal Action in 2011, under NALEMP, which involved the demolition and offsite disposal of 13 dilapidated cabins which were determined to contain asbestos and lead containing materials, offsite disposal of containerized wastes including fuel and paint cans and batteries, and also involved the containerization and offsite disposal of visually stained soils.

FY13 Actions:
ADEC reviewed, submitted comments, and approved a 2012 NALEMP Site Investigation Work Plan, which involved conducting site wide characterization efforts to determine the nature and extent of contamination in soils, sediments, and surface waters associated with the previously identified areas of concern. Analytical results confirmed that concentrations of PCB, petroleum, and metals contaminants in soils and PCBs and petroleum contaminants in sediment and surface water exceeded their respective cleanup levels. ADEC reviewed, submitted comments, and approved the subsequent 2012 NALEMP Site Investigation Report.

FY14 Actions:
ADEC reviewed, submitted comments on, and approved the 2013 Technical Memorandum/Addendum to the 2012 NALEMP Site Investigation Report as well as the 2013 NALEMP Site Investigation Work Plan. Work associated with the 2013 work plan was postponed for the 2014 field season. The 2013 work plan involves conducting more site characterization, removal actions, and confirmation sampling associated with previously identified contaminated soils and sediment.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Final Reporting under 18 AAC75.380

Project/Site Name: **Nowell Mine Old Mill Site**
Location: Juneau
Project Manager: Danielle Duncan
Primary RP: AJT Mining Properties

Hazard ID Number: 26195
Ledger Code: 14343760

Site Management Category: CSP Lead

Site type: Mine/Mill Site

Situation:
The site is approximately 1 acre in size and 300 ft. from the Sheep Creek Access Road and 200 ft. from the Sheep Creek Trail in Juneau. It is a former ore processing mill that operated sometime between 1896 and 1914 when it burned down following a lightning strike. Mercury amalgamation was used to recover gold and an unknown amount of mercury was presumably left on site following the fire. The area is heavily vegetated, below a steep slope, and relic mining debris is scattered throughout. Sheep Creek is in close proximity to the Site and multiple drainages and wet areas are present. In 1988, Ecology and Environment Inc. (E&E) completed a Site Inspection Report for the Thane Mine Dump Site Juneau, Alaska which included the Nowell Mill Site. One soil sample from near the foundation and three paired sediment and water samples from drainages were taken. The soil sample taken from near the foundation had antimony, arsenic, lead, and mercury in concentrations exceeding DEC cleanup values. Neither the sediment samples nor the paired surface water samples had elevated concentrations of metals. E&E concluded that additional data were required to assess potential soil contamination at the Nowell Mill Site.

FY13 Actions:
None

FY14 Actions:
In July 2013, AJT Mining Properties Inc. submitted a site characterization report that indicated that arsenic, chromium, lead, mercury, and silver were present in soil at the Site above their respective cleanup levels. The report was approved by ADEC and the site was officially added to the CS database in January 2014.

In the spring of 2014, ADEC determined that discrete soil sampling was necessary to adequately characterize the concentrations of mercury and other heavy metals at the Site. In April 2014, Nortech, AJT, and ADEC personnel visited the Site and discussed additional sampling requirements and locations. Sampling at the Site was conducted on May 8, 2014 by NORTECH with DEC staff in attendance. Arsenic, cadmium, lead, mercury, selenium, and silver are all present in concentrations exceeding ADEC cleanup levels. This is consistent with historic mining operations. The most heavily contaminated sediments occur near the foundation ruins and appear to decrease with distance. Elevated concentrations of metals near Sheep Creek suggest some migration to surface water, however, these concentrations are 10 times less than that near the foundation.

FY15 and FY16 Projected Actions:
- Site Cleanup under 18 AAC 75.360
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name:	**NPRA Legacy Wells General**	
Location:	National Petroleum Reserve - AK	Hazard ID Number: 26125
Project Manager:	John B. Carnahan	Ledger Code: 14339360
Primary RP:	BLM	

Site Management Category: PRP

Site type: Oil Exploration/Onshore

Situation
The National Petroleum Reserve Alaska (NPRA) is a 23-million acre area 200 miles north of the Arctic Circle managed by the Bureau of Land Management (BLM). Oil exploration activities within the NPRA included the installation of 136 wells and boreholes between 1944 and 1981 by the U.S. Navy and the United States Geological Survey (USGS). Many of the former well sites are known to have involved activities that are readily associated with contaminant releases, including fuel and chemical storage, discharge of petroleum products, and disposal of chemicals and debris. DEC established a project to track the Legacy Wells collectively as a group until such time that individual sites are established and tracked individually under separate Hazard ID's and ledger codes.

FY13 Actions:
None

FY14 Actions:
Actions were limited to coordinating with BLM on the need for site-specific environmental evaluations, and the successful establishment of a cooperative agreement between BLM and DEC for ongoing oversight of site assessments and cleanups.

FY15 and FY16 Projected Actions:
None

Project/Site Name: **NSB North Slope Site**
Location: Deadhorse
Project Manager: Keather McLoone

Hazard/Site ID Number: multiple
Ledger Code: 14243860

Primary RP: North Slope Borough

Site Management Category: RP Lead
Site types: multiple

Situation:
The North Slope Borough has 19 active sites in nine communities. The site types include bulk fuel storage, landfill/dump (a.k.a drum storage areas), schools, power generation/sub-station, and laundry/dry cleaner (a.k.a. washeteria).

FY13 Actions:
ADEC had an annual meeting with NSB to discuss the status of their sites. ADEC reviewed

FY14 Actions:
ADEC had an annual meeting with NSB to discuss the status of their sites. ADEC reviewed various planning and reporting documents. ADEC coordinated with NSB consultants on various sites, primarily related to a school construction project in Kaktovik.

FY15 & FY16 Projected Actions:

- Interim Removal Action under 18 AAC 75.330
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **NSB South Pad**
Location: Barrow
Project Manager: Bill O'Connell
Primary RP: North Slope Borough

Hazard ID Number: 25916
Ledger Code: 14328960

Site Management Category: RP Lead
Site type: Maintenance Yard/Shop

Situation:
The site was used for the unauthorized storage of over 350 drums containing petroleum products, RCRA regulated waste, and other material. Leaking drums resulted in petroleum contamination on the gravel pad. EPA Region X RCRA program is overseeing the characterization and disposal of the drums.

FY13 Actions:
Work consisted of collecting drums and moving them inside a heated building so that the contents could be characterized.

FY14 Actions:
Work involved overpacking and transporting the drums out of State for disposal, characterizing contamination on the gravel pad and evaluating for contamination in several sumps that were present in the shop building on site.

FY15 and FY16 Projected Actions:

- Site-specific analysis under 18 AAC 75.340 (i)(2)

Project/Site Name: **Odom Corporation 135 South Post Road**
Location: Anchorage
Project Manager: Evonne Reese (IC Unit)
Primary RP: Odom Corporation

Hazard ID Number: 3300
Ledger Code: 14209460

Site Management Category: RP Lead

Site type: Other

Situation:
Contaminated soil and groundwater were encountered during the 2000 removal of a 500-gallon underground storage tank (UST). Soil contamination began at 5' below the ground surface (bgs) and extended to the groundwater at about 7' bgs. DRO and benzene contaminated soil were remediated with the exception of an estimated 5.5 cubic yards of DRO-contaminated soil located adjacent to and below the building foundation which is 6 feet north of the former tank location. Groundwater was monitored for four events from 2002 to 2009 and TCE was found to be slightly above the cleanup level until the 2008 and 2009 sampling when the TCE concentrations decreased to non-detect. TCE was believed to be from an offsite source and unrelated to the 500-gallon UST.

FY13 Actions
A final ETM ranking was completed and a Cleanup Complete Determination was issued which that includes institutional controls to verify that site conditions remain protective.

FY14 Actions:
None for 2014

FY15 and FY16 Projected Actions:
Project Managers: please choose from the following regulatory/legal milestones considering a realistic scenario.

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Peak Deadhorse Lease 34 & 39**
Location: Deadhorse
Project Manager: Keather McLoone
Primary RP: Peak Oil Field Service Company

Hazard/Site ID Number: 891
Ledger Code: 14200960

Site Management Category: RP Lead
Site type: Oilfield Services

Situation:
Contamination initially identified as part of lease transfer site assessment. Impacted tundra adjacent to the pad likely caused by spills on site. Adjacent pads, as is typical of Deadhorse, also contaminated sites and likely contributing to surface water contamination which is the primary concern remaining at this site. Peak was purchased by Bristol Alliance Companies in 2013.

FY13 Actions:
ADEC reviewed a work plan submitted during this time frame and coordinated with Peak regarding sheen in surface water adjacent to the site..

FY14 Actions:
ADEC had meetings with Peak and separately with Exxon. Exxon was an adjacent pad occupant on what is now an unoccupied and empty pad. Both Exxon and Peak are involved in ongoing surface water monitoring in water bodies adjacent to these pads. ADEC reviewed reporting and planning documents for surface water monitoring and a report for an investigation effort to confirm past results reported, evaluate past treatment effectiveness, and further characterize offsite migration.

FY15 & FY16 Projected Actions:
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name: **Pedro Bay Former Dena'ina School**
Location: Pedro Bay
Project Manager: Bill O'Connell
Primary RP: ADEED

Hazard ID Number: 1860
Ledger Code: 14896480

Site Management Category: State Owned
Site type: School

Situation:
Numerous releases from fuel storage tanks and piping resulted in petroleum contamination in soil and groundwater at this site. The school was demolished around 2004 and the site was closed with institutional controls in 2013.

FY13 Actions:
Work consisted of final landfarm sampling, groundwater sampling, and the decommissioning of monitoring wells.

FY14 Actions:
The site was closed in FY 2014

FY15 and FY16 Projected Actions:

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name:	**Petro Marine Ketchikan**	
Location:	Ketchikan	Hazard ID Number: 3888
Project Manager:	Bruce Wanstall	Ledger Code: 14993160
Primary RP:	Petro Marine Services/Harbor Enterprises	

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
Historical leakage has contaminated soil and groundwater at the facility. Fuel products stored at the facility include gasoline and a range of diesels including jet fuel with lead. Bedrock and a hard pan soil layer have been observed in subsurface excavations during interim removal actions to remove hot spots of soil contamination. Seeps at the Tongass Narrows seawall periodically produce sheen that requires spill response boom and sorbent pad control measures. Some areas have been paved with asphalt following interim removal actions and a liner was recently placed around the tanks. A follow up site assessment was required after DEC-approved interim removal actions and a landfarming soil remediation plan were implemented by Petro Marine consultants in 2011 and 2012.

FY13 Actions:
In October, 2012, DEC met Petro Marine at the site to inspect the sea wall at the marine shoreline located in the active bulk fuel storage and transfer operations area downhill from South Tongass Highway and the active bulk fuel storage operations area uphill of South Tongass Highway (former Unocal Ketchikan Tank Farm) where contaminated soil is landspread, under a DEC approved plan, within the spill containment barriers. DEC and Petro Marine coordinated development of a long term monitoring sampling and analysis plan for the surface water-groundwater interface discharge at the seawall. Results show petroleum concentrations in periodic seepage water are too high for a cleanup complete determination without additional monitoring and property restrictions.

FY14 Actions:
By letter dated June 3, 2014, DEC determined there is no unacceptable risk to human health or the environment at the site as long as any remaining contamination is properly managed under prescribed institutional controls. Contamination remains in the groundwater surface water interface at levels exceeding State Water Quality Criteria. However, the contamination is in pockets and inaccessible behind a seawall, and in-situ treatment is not appropriate or feasible due to the proximity of sensitive marine receptors. As a result, long term monitoring is required to ensure that levels are declining over time, as a condition of this closure determination. A list of Institutional Control conditions are necessary for the site closure determination and must be closely adhered to by Petro Marine Ketchikan.

Petro Marine Services signed and returned the agreement page regarding the terms of the Institutional Controls in the Cleanup Complete Determination. By signing the closure determination agreement, it is the responsibility of the owner/operator/land manager to maintain the terms of the Institutional Controls as stipulated in the signed agreement.

FY15 and FY16 Projected Actions:
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Petro Marine Petersburg**
Location: Petersburg
Project Manager: Bruce Wanstall
Primary RP: Petro Marine Services

Hazard ID Number: 2380
Ledger Code: 14269560 & 14877260

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
In 1996, Petro Marine Services (PM) began rebuilding the former UNOCAL Petersburg Terminal by draining a clay-lined fluid containment pond to prepare the site for installation of new bulk fuel tanks and a concrete fluid containment area. A PM consultant performed test-pit sample field screening inside the containment pond and identified petroleum contamination in the upper layer of organic soil along the containment dike and on the bottom of the drained pond. During excavation, contaminated soil was separated from clean soil by field screening. An estimated volume of one thousand cubic yards was placed into a storage cell located off-site at 3.75 Mitkof Highway. After the removal action, eight confirmation samples of soil were collected in the footprint of the new tank farm site. Each of the laboratory sample results were below instrument detection for petroleum.

DEC approved results of analytical samples collected from the contaminated soil stockpile that were below site-specific Level C cleanup levels. When the new bulk fuel terminal became active the old bulk fuel tanks and the terminal piping run located south of Nordic Drive were decommissioned and the area was cleared of all structures. In 2002 DEC concluded that additional investigation of soil at the former tank facility, the piping run to the valve house and the truck rack was needed but could be delayed until the facility closes.

In September 2011 DEC and Petro Marine inspected the areas of concern noted by DEC in 2002. DEC letter dated November 30, 2011, approved a Site Characterization Plan submitted by a consultant on behalf of PM. The characterization sample results for the areas of concern were all below the originally approved Method One Level C soil cleanup levels for petroleum. An exception was the presence in one sample the compound benzo-(a)-pyrene (BAP) detected between the direct contact and migration to groundwater cleanup levels. DEC concurred with the conclusion of the PM consultant in the final report that the presence of BMP in soil remaining at the site was to de minimis extent.

FY13 Actions:
In a letter dated February 21, 2013, DEC determined that investigation and cleanup actions to date have served to excavate and adequately remove contaminated soil from the site. Based on information currently available, all exposure pathways are either de minimis or incomplete and any contaminant concentrations remaining on site do not pose an unacceptable risk to human health or the environment. The cleanup process at the site is complete.

FY14 Actions:
None

FY15 and FY16 Projected Actions:
None

Project/Site Name: **Phillips Petroleum LNG Plant - 2002**
Location: Nikiski
Project Manager: Paul Horwath
Primary RP: Conoco Phillips Alaska - Kenai

Hazard ID Numbers: 3932
Ledger Code: 14199260

Site Management Category: RP Lead
Site type: Liquefied Natural Gas Plant

Situation:
ADEC was informed of elevated arsenic concentrations detected in soil samples at this industrial facility in 2002. Further assessment work confirmed the presence of elevated arsenic levels in surface and near surface soils, related to the plant operations. Natural gas contains some arsenic which is removed during plant processing by charcoal media filter beds, and some of this spent media was spread on the plant property in the past. This past disposal practice may be the source of the elevated arsenic concentrations identified in soil at this plant. Several phases of site assessment work have been completed in the effort to define the arsenic impacted areas.

FY13 Actions:
ADEC received, reviewed, and responded to a June 2012 Soil Sampling Findings Report following the collection of 106 soil samples, in the effort to identify the areas at this site that exceed ADEC soil cleanup levels.

FY14 Actions:
ADEC received, reviewed, and responded to another Soil Sampling Findings Report dated February 2014, following the collection of 103 additional soil samples, in the effort to delineate the arsenic contaminated areas at this site.

FY15 and FY16 Projected Actions:
- Additional communications between ADEC and Conoco Phillips may lead to the issuance of an ADEC closure determination with institutional controls, based on the continued commercial-industrial use of this property.

Project/Site Name: **Pineapple's Texaco Station**
Location: Anchorage
Project Manager: Robert Weimer
Primary RP: Chevron-Texaco USA Products

Hazard ID Number: 4692
Ledger Code: 14270560

Site Management Category: RP Lead
Site type: Gas Station

Situation:
Petroleum contamination was discovered in 2008 during a Phase II site assessment sampling at the location of a former underground storage tank system for a gas station that closed in 1984. In 2009 a release investigation documented petroleum soil and groundwater contamination at the site above site cleanup levels that extend off-property across International Airport Road to a Chevron gas station on the other side of the road. Groundwater monitoring is on-going.

FY13 Actions:
Groundwater monitoring and additional release investigation work to help define the extent of the soil and groundwater contamination.

FY14 Actions:
Groundwater monitoring and additional release investigation work to help define the extent of the soil and groundwater contamination. DEC has requested the RP submit a corrective action plan for the remediation of the soil and groundwater contamination at this site.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site-specific analysis under 18 AAC 75.340 (i)(2)

Project/Site Name: **Portage Chevron Service Station 9-2609**
Location: Girdwood
Hazard ID Number: 2007
Project Manager: Robert Weimer
Ledger Code: 14974860
Primary RP: Chevron-Texaco USA Products

Site Management Category: RP Lead
Site type: Gas Station

Situation:
Petroleum contamination was discovered in 1993 during a preliminary site assessment conducted for highway right-of-way work, and the on-property drinking water well was found to be contaminated (which was decommissioned and a replacement drinking water well was installed at another location further away from the contaminated area). Between 1995 and 1998 groundwater monitoring wells were installed and soil samples were collected. In 2000 four underground storage tanks and 3,500 cubic yards of contaminated soil was excavated and treated. In 2008 additional site characterization was conducted to help define the extent of the remaining soil and groundwater contamination at this site. Groundwater monitoring is on-going.

FY13 Actions:
Groundwater monitoring.

FY14 Actions:
Groundwater monitoring. They installed and attempted soil vapor sampling but the soil gas probe screening interval was found to be submerged by the shallow groundwater.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site-specific analysis under 18 AAC 75.340 (i)(2)

Project/Site Name: **Prescott Equipment - Chipperfield**
Location: Anchorage
Project Manager: Robert Weimer
Primary RP: Prescott Equipment Company

Hazard ID Number: 420
Ledger Code: 14950060

Site Management Category: RP Lead
Site type: Maintenance Yard/Shop

Situation:
PCB and petroleum soil contamination identified in 1988 on this 1.5 acre property. EPA and DEC regulations apply to this site. In 2000 surface soil sampling was conducted to help identify the extent of the PCB and petroleum contamination at the site. In 2005 monitoring wells were installed and they identified solvent contamination in the groundwater at this site. Also in 2005 excavation of the contaminated soil begins. In 2006 some of the contaminated soil was disposed of in an out of state class D landfill and the remainder of the excavated contaminated soil was placed in a lined cell on the property. In 2012 additional site characterization and cleanup was conducted at the site. In 2013 some additional contaminated soil was disposed of in an out of state class D landfill.

FY13 Actions:
Additional site characterization and cleanup was conducted at the site and some contaminated soil was disposed of in an out of state class D landfill.

FY14 Actions:
DEC approved a work plan for conducting additional site characterization, installation of monitoring wells, and collect groundwater sampling.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site-specific analysis under 18 AAC 75.340 (i)(2)
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Prescott Equipment – Rampart Drive**
Location: Anchorage
Project Manager: O'Connell
Primary RP: State Lead

Hazard ID Number: 3752
Ledger Code: 14896860

Site Management Category: State Lead
Site type: Former Equipment Storage

Situation:
Trichloroethylene from an unknown source is present in soil and groundwater at this site

FY13 Actions:
Additional groundwater monitoring wells were installed to delineate the nature and extent of contamination at the site.

FY14 Actions:
Groundwater samples were collected and vapor intrusion was evaluated at a down gradient property.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335

Project/Site Name: **Rawn Way**
Location: Juneau
Project Manager: N/A
Primary RP: N/A

Hazard ID Number: 3712
Ledger Code: 14256560

Site Management Category: RP Lead
Site type: Park/Recreation

Situation:
On September 24, 2001 Arete Construction discovered heating oil (diesel) contaminated soil during utility construction work under the Rawn Way staircase, located in downtown Juneau. Smith, Bayliss, LeResche, Inc. conducted a limited site assessment investigation. Approximately 20 cubic yards of contaminated soil was excavated and transported to the City & Borough of Juneau gravel pit in Lemon Creek area on September 25, 2001. The soil was temporarily stockpiled in a lined and covered cell at the gravel pit while disposal options were being decided upon.

Two soil samples were collected from beneath the staircase following excavation and submitted to Analytical Resources, Inc. for analysis of diesel range organic (DRO) content. Sample RW-01 returned with 1,200 mg/kg of DRO and sample RW-02 contained 63 mg/kg of DRO. Sample RW-01 was collected 30 feet directly downhill of RW-02. Both samples were collected at a depth of two feet below ground surface (bgs). Subsequent field investigation determined no source of heating oil or associated plumbing within 30 feet of the excavation site. It was determined that the heating oil had migrated from an upgradient and offsite source. Following ADEC-approval, the contaminated soil was transported to United Soil Recycling (USR) for thermal remediation on November 15, 2001.

This site was entered into the Alaska Department of Environmental Conservation (ADEC) Contaminated Sites Database in May 2002. Off-site soil remediation was deemed complete with the closure of the USR facility. In April 2012, two ADEC staff conducted a site visit and collected GPS coordinates. In February 2013, the file was reviewed for closure purposes. In April 2013, ADEC staff Erik Norberg issued a Cleanup Complete Determination in the Contaminated Sites Database and drafted a closure letter for the City & Borough of Juneau.

FY13 Actions
ADEC project manager (Erik Norberg) reviewed March 12, 2002 "Site Assessment Report," submitted by Smith, Bayliss, LeResche, Inc. Mr. Norberg updated Exposure Tracking Model (ETM) ranking and drafted closure document for the site. Cleanup Complete Determination given on April, 26, 2013 and drafted a closure letter to City & Borough of Juneau city manager.

FY14 Actions
None

FY15 and FY16 Projected Actions:
None

Project/Site Name: **Red Dog Mine Dust**
Location: Kivalina
Project Manager: Robert Weimer
Primary RP: Teck Cominco Alaska Incorporated

Hazard ID Number: 1423
Ledger Code: 14864860

Site Management Category: RP Lead
Site Type: Mining Operations

Situation:
Red Dog Mine began operation in 1989 and is located about 20 miles south of Kivalina and is one of the world's largest zinc and lead mines. The port and mine sites are operated by Teck Cominco Alaska Incorporated and owned by NANA Corporation. The mineral soil is processed at the mine, which is located about 50 miles from the ocean, and the concentrate ore is transported along a 52 mile road by covered trucks to storage buildings at the port where the ore is moved by conveyor belt system from the buildings to barges, and transported from the barges to 3 miles off shore and placed into larger vessels. The road passes through the Cape Krusenstern National Monument, managed by the National Park Service, land owned by the State of Alaska, and land owned by NANA Corporation.

Fugitive dust from the transportation of the ore concentrate between the mine and the port has resulted in contaminating those areas and along the 52 mile connecting road for zinc, lead and cadmium above background levels. Petroleum contamination also occurred at the powerhouse from releases of crankcase oil and fuel oil from sumps beneath the generators.

FY13 Actions:
Road surface monitoring, dustfall jar monitoring, marine sediment sampling, and vegetation community monitoring.

FY14 Actions:
Road surface monitoring, dustfall jar monitoring, berry sampling, surface water sampling, and caribou tissue sampling.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site-specific analysis under 18 AAC 75.340 (i)(2)

Project/Site Name: **Residence 115 Anna Drive**
Location: Sitka
Project Manager: Bruce Wanstall
Primary RP: Daniel and Patrina Kilkeary

Hazard ID Number: 25470
Ledger Code: 14281960

Site Management Category: RP Lead
Site type: Residence

Situation:
In August 2006 Coast Guard Sitka alerted DEC that oil was observed as a large sheen on St. James Bay in Sitka emanating from an upland source. DEC tracked the surface flow path of the oil to 123 Riggs Road. The source of the release was determined to be from a buried tank supplying heating oil to the residence at 115 Anna Drive.

FY13 Actions
In 2012 the owner removed the buried tank and excavated the contaminated soil, which was transported for remediation off-site. The site was closed in December of 2012.

FY14 Actions:
None.

FY15 and FY16 Projected Actions:
None.

Project/Site Name: **Residence – 629 Tazlina Terrace**
Location: Glennallen
Project Manager: Eileen Olson
Primary RP: First National Bank Alaska

Hazard ID Number: 25920
Ledger Code: 14329060

Site Management Category: RP Lead
Site type: Residence

Situation: In August 2012 petroleum releases from two unregulated heating oil tanks were discovered at this residence located approximately 5.5 miles southeast of Glennallen. Petroleum-contaminated soil from the two tanks, a 500-gallon aboveground storage tank (AST) and a 1,200-gallon underground storage tank (UST) was to some extent comingled, but the AST release was determined to have been cleaned up to applicable 18 AAC 75 Method Two cleanup levels. Contamination at the UST location was associated with a damaged fill pipe; each time the tank was filled, heating oil was released into the underlying soil. Accessibility is a problem with respect to the UST because a garage with a slab-on-grade was constructed over the UST, with the fill end of the UST located just below the foundation along a wall of the garage and the fill pipe angled out from the wall to allow the tank to be filled. The garage is attached to the home. The tank was decommissioned in place and replaced by an AST. Contamination remains in soil associated with the UST release with diesel range organics (DRO) and benzene above applicable 18 AAC 75 Method Two cleanup levels. Accessible petroleum-contaminated soil from the UST was excavated to 17 feet below the ground surface (bgs), but site characterization including an investigation of groundwater, reportedly present at approximately 22 feet bgs, is not complete.

FY13 Actions:
A total of 218 tons of petroleum-contaminated soil associated with the AST and UST releases was excavated in August 2012 and in September 2012 was transported to Anchorage's Alaska Soil Recycling (ASR) for thermal remediation. The consultant reported the spill but did not submit a work plan. No work was reported in FY13 other than excavation and thermal treatment of the excavated soil.

FY14 Actions:
ADEC issued a letter reviewing the *Characterization and Remediation Investigation* report and an addendum submitted in early 2014. ADEC's letter noted that analytical soil samples confirmed that contaminated soil was removed north of the garage along the foundation wall adjacent to the UST; however, soil contamination remains beneath the garage and potential impact to groundwater requires investigation. ADEC's letter dated March 13, 2014 requested that a work plan be submitted by May 31, 2014, including a work schedule, to delineate the extent of soil contamination remaining beneath the slab and investigate the groundwater by installing three groundwater monitoring wells. The responsible party's consultant met with ADEC in April and June 2014 to provide additional information requested by ADEC.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Final Reporting under 18 AAC 75.380

Project/Site Name: **Residence-2790 Fritz Cove Road UHOT**
Location: Juneau
Project Manager: Schlichting
Primary RP: Bruce Hutchison
Hazard ID Number: 4286
Ledger Code: 14881660

Site Management Category: RP Lead
Site type: Residence

Situation:
The property is an older home with historic value located on Fritz Cove Road in Juneau, Alaska. During or before August 2006, the home's underground heating oil tank failed, discharging an unknown quantity of diesel fuel into the ground next to the house. Product migrated under the house to the septic tank system where it eventually found a preferential path through fractured bedrock to the intertidal are of Fritz Cove. Approximately 30 gallons of diesel were recovered from the septic tank. An in-situ treatment system was installed to treat unrecoverable fuel remaining under the house and in the bedrock.

FY13 Actions:
In August 2012, at DEC's request, the property owner conducted additional investigation and sampling throughout the site to establish current contamination conditions, evaluate exposure pathways, and determine whether the site was ready for closure. Sampling results showed that no further risks were present at the site to human health or the environment. In December 2012, ADEC issued a cleanup complete determination.

FY14 Actions:
None.

FY15 and FY16 Projected Actions:
None. The site is closed.

Project/Site Name: **River Terrace RV Park**
Location: Soldotna
Project Manager: Robert Weimer
Primary RP: River Terrace Mobile Home Park

Hazard ID Number: 1535
Ledger Code: 14974360

Site Management Category: CSP Lead
Site type: Laundry/Dry Cleaner

Situation:
River Terrace RV Park (RTRVP) is a 10-acre parcel located adjacent to the Kenai River in Soldotna. A dry cleaner facility operated there from the 1960s through the 1980s. Currently the parcel is occupied by a trailer court, a recreational vehicle park and associated facilities, including a laundromat.

In 1996/1997 assessments identified soil contamination above DEC cleanup levels for petroleum hydrocarbons and PCE on the property and PCE contamination in the sediment of the Kenai River. In 1997/1998 under the Environmental Protection Agency's direction approximately 3,300 cubic yards of soil and treated it on-site using a soil vapor extraction system.

In 2000 following a settlement agreement with the property owner, DEC performed a water quality and sediment investigation in the Kenai River adjacent to the site. The Record of Decision established cleanup levels at the site and specified Hydrogen Release Compound (HRC) as the method to treat the groundwater at the site. The injections occurred in a phased approach. In 2000, 56 HRC injection points were installed in Phase I; in 2001, another 51 injection wells were installed under Phase II.

In 2007, the non-toxic ethene/ethane was detected in several monitoring wells further indicating that the treatment system was successfully working. In 2011 600 pounds of HRC was injected at 4 injection points and in 2012 an additional 1,500 pounds of HRC was injected at 13 injection points to enhance the treatment in those areas.

DEC contactor continues to monitor the treatment at the site and evaluate trends in contamination in the groundwater and the surface water and sediments in the Kenai River.

FY13 Actions:
DEC contractor injected 1500 pounds of HRC into 13 injection points at the site, and conducted groundwater, sediment, sediment pore water, and surface water monitoring in the Kenai River.

FY14 Actions:
DEC contactor preformed groundwater sampling on the site property and surface water and sediment sampling in the Kenai River. The monitoring documented that the past HRC injections were continuing to reduce solvent contamination at the site.

FY15 and FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335
- Site-specific analysis under 18 AAC 75.340 (i)(2)

Project/Site Name:	**Ross Adams Mine USFS (aka Bokan Mountain)**		
Location:	Prince of Wales Island	Hazard ID Number:	2994
Project Manager:	Anne Marie Palmieri	Ledger Code:	14878160
Primary RP:	US Forest Service/Newmont Mining		

Site Management Category: RP Lead
Site type: Abandoned Mine

Situation:
The USFS Ross-Adams Uranium Mine is located on Bokan Mountain on US Forest Service-managed Tongass National Forest lands on the east side of Prince of Wales Island. The mine was developed in 1957 as an open-pit mine, and later was an underground mine until it was closed in 1971. Residual ore and waste rock containing elevated concentrations of metals and radionuclides are present in the uplands extending into freshwater streams, and on the tidelands.

In 2008, the US Forest Service entered an agreement with Newmont Mining to conduct an Engineering Evaluation/Cost Analysis. A Site Characterization was conducted in 2010 and a draft Engineering Evaluation/Cost Analysis provided to DEC in 2011. Although DEC provided comments on the report, the resolution of technical concerns was delayed due to other US Forest Service priorities. The site is adjacent to claims where UCore is exploring for rare-earth elements. UCore operations will be somewhat impacted by the future cleanup actions on the roads and inter-tidal areas.

FY13 Actions:
Work consisted of coordination with DNR regarding concerns about potential impacts to tidelands and use of tidelands material, and internal DEC discussions about solid waste and water quality issues. Staff contacted the US Forest Service requesting responses to previous comments on a draft Engineering Evaluation/Cost Analysis to move the project forward. A comment resolution meeting was held in Anchorage. Staff participated in the Organized Village of Kasaan's Mining Symposium and gave a presentation about the work at this site to encourage community participation in the cleanup process.

FY14 Actions:
Staff reviewed several technical memoranda provided by the US Forest Service and Newmont Mining to assist in resolving site issues prior to the submittal of a revised draft Engineering Evaluation/Cost Analysis.

FY15 and FY16 Projected Actions:

- Site Cleanup under 18 AAC 75.360
- Site-specific analysis under 18 AAC 75.340 (i)(2)
- Settlement Agreement / Compliance Agreement Negotiation

Project/Site Name:	**Salt Chuck Mine EPA/USFS**		
Location:	Thorne Bay, Prince of Wales Island	Hazard ID Number:	2993
Project Manager:	Anne Marie Palmieri	Ledger Code:	14316060
Primary RP:	EPA Superfund-Lead		

Site Management Category: EPA Lead
Site type: Abandoned Mine

Situation:
The Salt Chuck Mine is an abandoned historic gold, silver, copper and palladium mine on the southeast side of Prince of Wales Island. The site is 4½ miles from Thorne Bay, and is accessible by a half-mile trail from the road or by water. The mine and mill operated from 1905 to 1941, processing more than 326,000 tons of ore. An extensive 23-acre tailings deposit (estimated 100,000 cubic yards) is located mostly in the intertidal zone south of the mill, on state-owned tidelands, as well as in the uplands, on US Forest Service-managed Tongass National Forest land. The Salt Chuck Mine was listed on the Environmental Protection Agency's National Priorities List in 2010. In 2011, the US Forest Service removed 5,400 cubic yards of contaminated soil from the uplands at the mill site. The EPA is funding the characterization and cleanup of the site using the Superfund.

FY13 Actions:
Work involved review and commenting on EPA's sampling plans for both 2012 and 2013 summer seasons. Staff met with DNR and ADF&G to discuss the site history, Superfund process, and facilitate a coordinated State response on site work. Staff participated in a two-day project scoping meeting with EPA, DNR, ADF&G, ADHSS, USFS, and US Fish & Wildlife.

FY14 Actions:
Work involved review and comment on EPA's risk assessment and treatability study work plans. A site visit was conducted and public meetings in Kasaan and Thorne Bay were held with EPA and their consultants. The annual field sampling reports were also reviewed.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Risk Assessment under 18 AAC 75.340 (f)
- Site-specific analysis under 18 AAC 75.340 (i)(2)

Project/Site Name: **Sand Lake Cleaners**
Location: Anchorage
Project Manager: Robert Weimer
Primary RP: Sage Properties LLC

Hazard ID Number: 3319
Ledger Code: 14922460

Site Management Category: RP Lead
Site type: Laundry/Dry Cleaner

Situation:
In 2000 soil borings identified chlorinated solvent contamination behind the dry cleaner building. Between 2002 and 2006 monitoring wells were installed that identified chlorinated solvent contamination in the groundwater at 60 to76 feet below ground surface. In 2010 the owner of one of the adjacent commercial buildings conducted indoor air sampling of their building, which did not find contamination in their indoor air. In 2011 soil gas sampling was conducted that identified chlorinated solvent vapor contamination above screening levels both on-property and off-property, near nearby residential and commercial buildings. In 2013 and 2014 some additional indoor air sampling was conducted, which did not find contamination in the indoor air.

FY13 Actions:
None. Sage Properties LLC refused DEC request to do vapor intrusion assessment, groundwater monitoring, release investigation and corrective action.

FY14 Actions:
DEC state contractor conducted vapor intrusion data collection for the nearby commercial and residential buildings.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site-specific analysis under 18 AAC 75.340 (i)(2)

Project/Site Name:	**Sawmill Cove – Alaska Pulp Corporation**		
Location:	Sitka	Hazard ID Number:	410
Project Manager:	Evonne Reese	Ledger Code:	14647160
Primary RP:	City and Borough of Sitka		

Site Management Category: RP Lead
Site type: Log processing/sawmill

Situation:
The former Alaska Pulp Corporation (APC) pulp mill site is located on the north and west shores of Sawmill Cove, approximately five miles east of Sitka, in southeast Alaska. The mill, which operated from 1959 to 1993 producing wood fiber used primarily in the production of rayon fabrics and later used in paper manufacturing. Production wastes included wood waste, ash, general debris, stack emissions, and high volumes of pulp process wastewater which contained pulp processing residues.

In 1999 the City and Borough of Sitka (CBS) entered into a property transfer agreement with APC. The CBS now operates the site as Sawmill Cove Industrial Park.

The State of Alaska assumed oversight of the investigation and cleanup from EPA in the fall of 1995. A Commitment Agreement signed by APC and DEC required APC to investigate and remediate any and all constituents of concern present at the site in concentrations above levels determined to be a threat to human health and the environment. DEC was appointed as the lead oversight agency.

Risks to human health were evaluated, considering exposure to individuals from both the Sawmill Bay Cove and developed Mill site areas. The human health risk assessment identified that people could possibly have been exposed to contaminants through inhalation, skin absorption, or accidental ingestion of contaminated ash, soil, or surface water. The ecological risk assessment documented that the Sawmill Cove sea floor community had been severely impacted by wood waste residues and chemical break-down products. Cleanup remedies were taken to prevent these forms of exposure to humans. A number of early cleanup action occurred at the mill site during the course of the remedial investigation.

There were two monitoring events of the Sawmill Cove benthic community to determine if natural recovery was occurring 2000 and 2011. DEC concluded that the Sawmill Cove ecology would naturally recover over time if left undisturbed.

FY13 Actions:
Meetings in Sitka between DEC, CBS, and other stakeholder to discuss outcome of 2011 benthic community monitoring results.

FY14 Actions:
An amended Record of Decision was finalized which terminated the monitoring program and made modifications to the allowable activities in the Area of Concern. These updates were memorialized in documents signed by DEC Commissioner, Larry Hartig and the CBS Municipal Administrator, Mark Gorman.

FY15 and FY16 Projected Actions:
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Selawik IRA Fuel Project Former Tank Farm**
Location: Selawik Hazard/Site ID Number: 1421
Project Manager: Grant Lidren Ledger Code: 14618260
Primary RP: Selawik IRA Council / Native Village of Selawik

Site Management Category: CIP Lead
Site type: Bulk Fuel Storage

Situation:
The Selawik IRA Fuel Project Former Tank Farm site is located on the northern portion of an island in the Selawik River. The tank farm formerly located at this site was reportedly in use between 1972 and 1996 and consisted of seven horizontal above ground fuel storage tanks with a combined capacity of approximately 100,000 gallons of diesel/heating oil, and 20,000 gallons of gasoline. A fuel dispenser was located adjacent to the tank farm. Contamination at the site is attributed to releases from the fuel tanks, piping, and dispenser.

The IRA Council initiated a project to construct a new grocery store at the IRA Fuel Project Former Tank Farm location. Redevelopment of the property began in approximately 2007 with the installation of pilings intended to support a new community store. Plans for the store construction were put on hold when contamination was encountered at the site in 2010.

FY13 Actions:
Additional characterization was conducted in 2012 in an effort to delineate the extent of soil contamination to the east of the site and evaluate the potential migration of contaminants to nearby surface water. Soils samples and surface water samples collected did not contain contaminant concentrations above method two arctic zone cleanup levels or Alaska Water Quality Standards respectively.

To address the complete exposure pathway to contaminated surface soil at the site, capping activities were conducted during Fall of 2012. Areas of contamination identified during the 2010 and 2012 investigations were covered with foam board, then capped with one to three feet of gravel with the objective of keeping the underlying soil frozen and creating a physical barrier between potential receptors and contaminated soil.

FY14 Actions:
The site was closed as Cleanup Complete – Institutional Controls with a Notice of Environmental Contamination in March 2013.

FY15 & FY16 Projected Actions:
Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Selawik Old AVEC Tank Farm**
Location: Selawik
Hazard/Site ID Number: 25508
Project Manager: Grant Lidren
Ledger Code: 14320960
Primary RP: Alaska Village Electric Co-op, Inc. (AVEC)

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
In 2010, contamination was encountered at the site during a Brownfield Assessment. Historically, the site was used by AVEC for fuel tank storage and electrical generation.

FY13 Actions:
The generator building was decommissioned and the eight empty fuel tanks were cut up and disposed of in the Selawik landfill.

FY14 Actions:
A total of 14 soil borings were advanced to further characterize the site. Six soil samples collected contained petroleum constituents above method two arctic zone cleanup levels.

FY15 & FY16 Projected Actions:
- Site Characterization under 18 AAC 75.335

Project/Site Name: **Seward Ship's Drydock**
Location: Seward
Project Manager: Paul Horwath
Primary RP: Seward Ship's Drydock, Incorporated

Hazard ID Numbers: 4505
Ledger Code: 14246860

Site Management Category: RP Lead
Site type: Marine Vessel Maintenance Facility

Situation:
Marine vessel maintenance operation at this facility largely involve sandblasting the paints and coatings applied to the hulls of ocean ships and refinishing with new paints and coatings. Spent sandblasting grit contains the paints and coatings that were applied to the hulls, and these paints and coatings contain metals and can contain toxic chemicals and metals to inhibit the growth of organisms and algae. Copper, arsenic, and tributyltin were the primary contaminants of concern detected in surface and near surface soils at this site. Spent sandblast grit, and sandblast grit impacted soils were excavated and transferred to a permitted landfill for permanent disposal.

FY13 Actions:
ADEC issued a cleanup complete determination for this site dated March 11, 2013.

FY14 Actions:
No actions in FY14.

FY15 and FY16 Projected Actions:
- No further actions projected.

Project/Site Name:	**Shepherd of the Valley Church HOT**		
Location:	Juneau	Hazard ID Number:	3856
Project Manager:	Bruce Wanstall	Ledger Code:	14147160
Primary RP:	Shepherd of the Valley Church		

Site Management Category: RP Lead
Site type: Commercial/Retail/Office

Situation:
In January 2002 church officials reported to DEC the loss of up to 1,000 gallons of heating oil from the church's underground heating oil tank (UST). As the site was excavated and the tank was lifted out the environmental consultant recovered free product and oil-contaminated soil from under the UST. The volume of free product recovered was estimated at three and five gallons. The fourteen drums (six cubic yards) of contaminated soil recovered was later transported off-site and remediated.

The DEC Oil Spill Responder (PERP) observed during the site activity in 2002 that a layer of contaminated soil and free phase petrol remained in subsurface soil on the property and the majority of the spilled product likely migrated to some other location on the property such as under the building. Concern that the extent of contamination would spread to neighboring properties, the consultant installed two wells to test groundwater for contamination. Laboratory analysis of groundwater samples detected heating oil (diesel) in both wells. As a result the case was transferred to the Contaminated Sites Program for additional cleanup oversight.

FY13 Actions:
On December 24, 2012, DEC had conversation with a representative of the church to discuss the intent of the responsible party to make arrangements to obtain new environmental information on conditions at the site. On request, DEC scanned the entire PERP file into digital format and was combined with the DEC letter dated March, 2006, sent by electronic mail. The 2006 DEC letter notified church officials of their statutory and regulatory responsibility to provide the DEC, in timely manner, with a plan for approval that will provide the information necessary to address the risk to human health, safety and the environment on the property.

FY14 Actions:
In a letter dated September 4, 2013, DEC approved a work plan submitted by an environmental consultant on behalf of Church officials. In a letter dated October 30, 2013, DEC approved the results and conclusion in a Site Investigation Report submitted by a qualified consultant for Church officials documenting soil sampling and laboratory analysis at the site. The DEC Report Approval letter requested that monitor wells on the property be decommissioned in accordance with published department guidance. Site characterization indicated that DRO concentrations in soil and groundwater had attenuated below the regulatory levels.

In a letter dated December 9, 2013, DEC notified Church officials of a Cleanup Complete Determination that any remaining soil contamination was below cleanup levels and is stable. All exposure pathways are de minimis or incomplete and no further cleanup is required.

FY15 and FY16 Projected Actions:
None

Project/Site Name: **Shopper's Forum**
Location: Fairbanks
Project Manager: Tamara Cardona
Primary RP: Gavora Inc.

Hazard ID Number: 3682
Ledger Code: 14274260

Site Management Category: RP Lead
Site type: Laundry/Dry Cleaner (former)

Situation:
Groundwater investigations at a property near Shopper's Forum (Fairview Manor Apartments, across Airport Way from Shoppers Forum) showed tetrachloroethylene (PCE) and trichloroethylene (TCE) contamination above cleanup levels, suggesting possible offsite contamination and a source at the upgradient property boundary (Shopper's Forum property). Former dry cleaning operations at the Shopper's Forum were considered a possible source. Later on, during the Weeks Field areawide study (file number 102.57.004) in 2008, a property also downgradient of Shopper's Forum, PCE was found in soil and groundwater in the right-of-way. Further assessment and historical review indicate releases have occurred from at least two historic drycleaners that have operated on the property. One was located in the Annex building on the south end of the property and the other was located along the north end of the property. Vapor intrusion has been documented in the Annex building.

FY13 Actions:
In 2013 DEC worked with the responsible party to complete the approval of a work plan for the installation of a sub-slab depressurization system. Simultaneously, DEC maintained an air scrubber at the Miguel's restaurant office to temporarily mitigate the high levels of solvent within the office space. On two separate occasions, DEC conducted limited indoor air sampling to ensure that the air scrubber was helping reduce the high solvent air concentrations.
DEC has met with the City of Fairbanks and Rudy Gavora, former and current property owners respectively, and their attorneys. Gavora has sued the City for assistance with the cleanup costs, as a result, DEC and DOL participated in a meeting with all parties to provide information on the requirements of the cleanup process.

FY14 Actions:
DEC will continue to work with the responsible party (s) in the oversight of the cleanup. A soil vapor extraction system shed (currently located at the Gaffney West –Royal Masters site) may become available within the next year and may potentially be used at the Shopper's Forum site for cleanup of the main source area by the Annex building. Formal agreements would need to be made with the responsible parties for the use of the remediation system.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Settlement Agreement / Compliance Agreement Negotiation

Project/Site Name:	**Sitka NOB Area G, Igarotte Housing**		
Location:	Sitka	Hazard ID Number:	25736
Project Manager:	Anne Marie Palmieri	Ledger Code:	14317760
Primary RP:	Federal Aviation Administration/Indian Health Service		

Site Management Category: RP Lead
Site type: Residence

Situation:
The former Sitka Naval Operating Base (SNOB) was constructed on Japonski Island beginning in the 1930s and operated until 1946, providing defense of Southeast Alaska during World War II. The facility included several housing areas, tanks farms, and a service station. The Igarotte Housing Area was a collection of duplex housing for married personnel. All of the former base areas were cleaned up by the US Army Corps of Engineers as Formerly Used Defense Sites, with the exception of the Igarotte Housing Area as it was used by agencies other than the Department of Defense. The housing units were demolished and removed in the mid-1970s. The property is currently owned by the Alaska Area Native Health Service, but is managed by the Southeast Alaska Regional Health Consortium (SEARHC), which operates the Mt. Edgecombe Hospital.

FY13 Actions:
Letters were sent to the Federal Aviation Administration, Indian Health Service, Bureau of Indian Affairs, US Department of the Navy, US Army Corps of Engineers, and Southeast Alaska Regional Health Consortium notifying them of their status as potential Responsible Parties and requesting information about the site from them. A meeting was held with all Responsible Parties to discuss the site history and actions which needed to occur.

FY14 Actions:
Negotiations continued with the Responsible Parties. A site visit was conducted.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **Sitka Tank Farm**
Location: Sitka
Project Manager: Danielle Duncan
Hazard ID Number: 900
Ledger Code: 14630360
Primary RP: Chevron Environmental Management Company

Site Management Category: RP Lead

Site type: Bulk fuel storage

Situation:
The site is a former Unocal bulk fuel terminal that was in service from 1937 to 1991. In 1990, the City of Sitka sent the Union Oil Company a Notice of Soil contamination and installed monitoring wells. The site was listed on the DEC Contaminated Sites database the same year. Lead concentrations above ADEC Method II Cleanup levels were detected by an unknown contractor on behalf of the Sitka Tribe in 1996. In 1998, the tanks and aboveground fuel piping were removed. Two years later, Brady Environmental, on behalf of North Pacific Processors, Inc. conducted a soil investigation and found diesel range organics (DRO) exceeding ADEC Method II Cleanup levels along Katlian and Kogwanton Streets. A groundwater use survey conducted in 2002 by Oasis Environmental on behalf of Unocal determined that petroleum hydrocarbons in shallow groundwater were not likely to impact current or future drinking water resources near the site. Groundwater monitoring that had begun in the 90's ceased in about 2005 when it was concluded that petroleum contamination in groundwater had attenuated. A 2003 investigation by GeoEngineers assessed the extent of lead contamination along the fuel pipeline corridor and found that lead in soil was not a result of leaded gasoline spills, but a result a weathering lead based paint from the pipelines and supports. In 2005, Unocal was purchased by Chevron. In 2005-2006, OilRisk Consultants on behalf of Unocal excavated approximately 24 tons of lead contaminated soil, concrete, and piping. Then in 2009 and 2010, Conestoga-Rovers and Associates (CRA) delineated the extent of DRO contamination both vertically and laterally and the DEC, Chevron, and CRA evaluated the site and agreed on a cleanup level of 8250 mg/kg DRO. During 2011 and 2012, meetings were held to discuss excavation and institutional controls options.

FY13 Actions:
CRA conducted further investigations into the vertical and lateral extent of contamination using soil borings and submitted a report to DEC in July of 2012. In addition, off-site contamination at the Reader property and institutional controls were discussed at a meeting between CRA, Chevron, and DEC.

FY14 Actions:
Chevron purchased the two adjacent parcels (Reader property) that also has subsurface soil contamination exceeding human health levels. CRA submitted a conceptual site model in preparation for a work plan. DEC, CRA, and Chevron had another meeting to discuss cleanup levels and case closure using institutional controls.

FY15 and FY16 Projected Actions:
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Sitka Waste to Energy Facility**
Location: Sitka
Project Manager: Evonne Reese
Primary RP: City and Borough of Sitka

Hazard ID Number: 1991
Ledger Code: 14647560

Site Management Category: RP Lead
Site type: Solid waste incinerator

Situation:
Sitka's former municipal solid waste incinerator was operated as a "waste-to-energy" facility by the City and Borough of Sitka (CBS) from 1985 to 2000. In addition to the former incinerator, a separate boiler and associated fuel tanks located on the property were operated by Sheldon Jackson College for campus steam heat. A 25,000-gallon above-ground tank received from the Navy was placed on the property for fuel storage shortly after World War II. A concrete secondary containment system was later installed, and the tank was subsequently used to store used oil collected by the Harbor Department from various locations throughout the city.

The Environmental Protection Agency (EPA) sampled fly ash, bottom ash, and soil at the facility in the late 1980s and early 1990s. A 1994 report by an EPA contractor indicated a release of heavy metals into soil. Soil totaling approximately 14,400 cubic yards was thought to be contaminated. The facility was added to the DEC contaminated sites database after the 1994 EPA report was issued. No further investigatory work occurred until 2000, when the facility was decommissioned and closed.

DEC and CBS conducted a joint site inspection in October 2000 in preparation for site characterization activities under the Oil and Other Hazardous Substances Pollution Control Regulations (18 AAC 75) site cleanup rules. During the inspection, it was noted that the facility yard had been paved as a requirement of the facility's air quality permit renewal. The pavement covered the contaminated soil identified by EPA six years earlier.

FY13 Actions
DEC staff met with City of Sitka officials and agreed upon the zoning changes from R-2 Residential to P Public.

FY14 Actions
A Cleanup Complete determination letter was issued to the City of Sitka which details the site history and the institutional control requirements in order to protect potential receptors from exposure to the contamination that remains onsite.

FY15 and FY16 Projected Actions:

- Check with RP every five years to verify that conditions remain protective - Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Six-Mile Richardson Highway Area-wide Treatment/Monitoring**
Location: Fairbanks/North Pole Hazard ID Number: 25660
Project Manager: Janice Wiegers Ledger Code: 14621570
Primary RP: unknown

Site Management Category: CSP Lead
Site type: Residence

Situation:
In 1995/1996, an area-wide trichloroethylene (TCE) groundwater plume was discovered in the Six-Mile Richardson Highway area. The plume is over a mile in length, up to 1,200 feet wide, and up to 100 feet in depth. It extends in a northwesterly direction from south of the New Richardson Highway to the Six-Mile Village Subdivision area.

The plume impacted fifteen residential drinking water wells and the homeowners were provided financial assistance to install water treatment systems (e.g., carbon filters) to remove the TCE from their drinking water. In 1996, DEC initiated an annual long-term groundwater program that includes sampling from permanent monitoring wells and a selected number of residential wells. The data indicates a decreasing trend in contaminant concentrations over time.

Individual site investigations were conducted concurrently with the initial phases of the area wide groundwater investigation. Site investigations at the McCall, Holder, Walsky, and Six-Mile Truck Shop properties concluded that there are multiple source areas where TCE was discharged to the ground. The individual source areas are creating groundwater plumes that eventually merge together to form the area-wide plume. The primary source areas appear to be located on the Holder and Walsky properties. Potentially responsible parties have been notified of the contamination, but DEC has continued to lead investigation and treatment of the areawide plume.

FY13 Actions:
Work involved monitoring plume stability and sampling and treatment system maintenance of impacted drinking water wells. Additional sampling may be needed to investigate the vapor intrusion pathway.

FY14 Actions:
Work involved monitoring plume stability and sampling and treatment system maintenance of impacted drinking water wells. Additional sampling may be needed to investigate the vapor intrusion pathway.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater Monitoring under 18 AAC 75.345
- Site-specific analysis under 18 AAC 75.340 (i)(2)
- Final Reporting under 18 AAC75.380
- Settlement Agreement / Compliance

Project/Site Name: **Skagway (Nahku) Ore Terminal**
Location: Skagway
Hazard ID Number: 401
Project Manager: Bruce Wanstall
Ledger Code: 14994360
Primary RP: White Pass & Yukon Route (a.k.a. Pacific & Arctic Railway & Navigation Company)

Site Management Category: RP Lead
Site type: Harbor/Port/Marina

Situation:
The release of lead and zinc ore concentrate fugitive dust to upland properties and to harbor sediments of the marine environment from historical ore transfer operations (1970s, 1980s) is confirmed by site investigation. Complete human exposure route pathways include inhalation, ingestion and dermal contact. Site cleanup in Skagway by responsible party Pacific and Arctic Railway and Navigation Company and other responsible parties has reduced the risk of human exposure the on the affected upland properties, however, contaminated sediments in the Ore Basin of the Skagway Harbor remain a major concern to the Municipality of Skagway (landowner) and the DEC for risk associated with complete exposure pathways to public health. DEC requested the landowner submit a thorough seafood risk assessment if the planned sediment dredge removal action cleanup remedy is not implemented in the near future.

FY13 Actions:
In November 2012 DEC met with Skagway City Manager Tom Healy and legislative consultant John Walsh to discuss a schedule and scope for the Gateway Initiative project to dredge contaminated sediments from the basin of the Skagway Harbor at the Ore Terminal ship loading dock. Additional assessment borings will be advanced into subsurface sediments of the basin in 2013. The site activity will provide essential geotechnical data for the project and will better define the volume of contaminated material that is planned to be encapsulated into a confined on-site monofill in conjunction with reconstruction of the ore dock.

FY14 Actions:
In April 2014, DEC approved a Skagway Harbor Gateway Pre-Engineering Assessment Report. The Report documents benthic core sampling and laboratory analysis in 2013 to characterize sediments in the Skagway Harbor for contamination from legacy and contemporary sources. The cores were advanced deeper below the surface than previous investigations. The spatial distribution of selected metals and polyaromatic hydrocarbons (PAHs), combined with the relatively consistent depth to refusal (clean sand at ~1.0 to 1.5 meters below surface) for each sediment core illustrates that the base layer of the affected sediment zone in the SOT harbor represents the highest degree of contamination. The levels of contamination is highest in proximity to the ore dock, especially near and to the southwest of the loader, and sediment contamination falls rapidly off at the sand boundary layer.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Site-specific analysis under 18 AAC 75.340 (i)(2)
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380
- Settlement Agreement / Compliance Agreement Negotiation

Project/Site Name: **Skagway Tank Farm**
Location: Skagway
Project Manager: Evonne Reese
Primary RP: White Pass/Yukon Railroad

Hazard ID Number: 2541
Ledger Code: 14619760

Site Management Category: RP Lead

Site type: Bulk Fuel Storage

Situation:
Historically this property was used as a tank farm during World War II. It continued to operate in this capacity until 1994 when it was acquired by the White Pass/Yukon Railroad and the tanks and associated piping were removed. Site assessment and cleanup activities began in 1997 and continued through 2001. A large bioremediation cell was constructed in order to remediate the contaminated soil on-site. A long-term biocell and groundwater well sampling, operations, maintenance plan was issued and has been followed to date. The plan included tilling of the biocell during summer months, the addition of fertilizer to increase contaminant degradation, sampling of the upper 18 inches of the biocell, removal of the remediated top layers of soil when samples show they met cleanup levels, and sampling of groundwater monitoring wells in the area.

FY13 Actions:
Final sampling of the biocell was done in fall of 2013 and used a Multi-Incremental sampling approach to determine if tilling and fertilizer addition can be discontinued. The sampling results determined that continuation of the biocell treatment was unnecessary and that the institutional control requirement of biocell maintenance could be removed in our records. The other institutional controls on this property still apply.

FY14 Actions:
None

FY15 and FY16 Projected Actions:

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name:	**Skagway Wharf Tanks Area**		
Location:	Skagway	Hazard ID Number:	2694
Project Manager:	Bruce Wanstall	Ledger Code:	14996760
Primary RP:	White Pass & Yukon Route Inc.		

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
Directly adjacent to the Small Boat Harbor, is the former site of eleven aboveground storage tanks (ASTs) built in 1942 for use by the U.S. Army to store petroleum hydrocarbon products. In 1962 the bulk fuel AST facility was sold to Pacific and Arctic Pipelines Inc. who operated the facility until dismantling began in 1995 and the last of the ASTs were removed in 1996. As a result of historical activities on the site, there is an extensive residual light non-aqueous phase liquid (LNAPL) zone due to the coarse soils and tidally induced water table fluctuations. Over a large area of the site there is a thick zone of residual LNAPL that is smeared across the interval of soil corresponding to the water table fluctuations. In 2004, the upland road and surface area was expanded toward the boat harbor where a sheet pile retaining wall was installed. Golder has installed a system of subsurface wells over the length of the former AST area and a network of subsurface piping to pump air into and pull fuel vapors back out of the hydrocarbon smear zone. When fuel appears in groundwater wells it is recovered by pumping until the well is cleared. Active recovery of fuel and vapors from the subsurface continues on a seasonal basis and sample monitoring of groundwater contamination takes place on a less frequent schedule.

FY13 Actions:
In April, 2013, DEC held a teleconference meeting with White Pass consultants to coordinate a plan to carry out department requested changes in the Environmental Monitoring Plan (EMP). DEC approved a work plan to perform annual groundwater monitoring in fall 2013 and replace well MW00-44 in 2014 with a 6-8inch product recovery well that spans depths of high and low tide groundwater levels and a flush mount road-box to accommodate the seasonal high road traffic at the well site.

FY14 Actions:
In April 2014, DEC contacted the White Pass consultant to check on progress toward delivery of the EMP analytical sampling report for 2013. In June, 2014, DEC agreed to have the fall 2013 and 2014 sampling events in a semi-annul EMP report submitted by the end of the year. A drill rig was scheduled to be in Skagway this season to replace MW00-44 with a recovery well.

FY15 and FY16 Projected Actions:

- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Stevens Village Old School**
Location: Stevens Village
Project Manager: Willett Boger
Primary RP: Yukon Flats School District

Hazard ID Number: 3075
Ledger Code: 14103080

Site Management Category: State Owned
Site type: Bulk Fuel Storage/Stock Pile

Situation: Old BIA School building had three 4,000 gallon ASTs inside a bermed area. Building removed in 2003 and soils characterized. Tanks and contaminated soil removed in 2004. 1,500 cubic yards of stockpiled soil is uncharacterized. Stockpiles located at old village landfill area. New landfill was constructed in new location and old landfill was closed in 2012. Stockpiles sampled (CIP Project) in spring 2012 for use as top cover in new landfill but were covered in place as part of old landfill closure.

FY13 Actions: DEC finished review of project reports and coordinated with Solid Waste program on final disposition of soil.

FY14 Actions: No action

FY15 and FY16 Projected Actions: None Planned

Project/Site Name: **Swanson River Oil Field**
Location: Sterling
Project Manager: Campbell
Hazard ID Number: 3821
Ledger Code: 14118860
Primary RP: Hilcorp Alaska, LLC and Chevron

Site Management Category: RP Lead
Site type: Oil and gas production facility

Situation:
A 1989 site assessment identified pad and flare pit hydrocarbon, glycol and PCB contamination at multiple sites throughout the field. A monitoring network was established and annual monitoring has been conducted for over 20 years. The hydrocarbon plumes have apparently stabilized, and monitored natural attenuation is the default management option. There are monitoring wells with significant product accumulations. The field was acquired by Hilcorp, from Chevron in 2011.

FY13 Actions:
Review of all pads with known contamination.

FY14 Actions:
Monitoring wells were sampled for the first time since 2011. Based on the results, we will be reviewing future sampling schedules.

FY15 and FY16 Projected Actions:

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Swanson River P&S Yard**
Location: Sterling
Project Manager: Campbell
Primary RP: Chevron

Hazard ID Number: 452
Ledger Code: 14961160

Site Management Category: RP Lead
Site type: Oil and Gas Industry

Situation:

On July 1, 1988, an area of hydrocarbon odor was discovered in drainage down gradient from P&S yard at Swanson River Field. Release occurred before 1986. The contamination extends from the P&S Yard, to the eastern groundwater seeps and into the wetlands. The Xylene is from spillage at above ground storage tank facility. The spill area is estimated to cover 25,000 square feet.

Various monitoring and remediation technologies have been tried. LTM and air sparging with sub-surface discharge of treated water to adjacent leach field. A bentonite slurry wall surrounds the site to control infiltration of water through remaining contaminant plume. The area inside the slurry wall is being de-watered and the material with in the slurry wall has been excavated and land farmed. The landfarming project is in the final stages.

FY13 Actions:

Groundwater discharge monitoring, active excavation and land farming.

FY14 Actions:
Groundwater discharge monitoring, active excavation and land farming, drilling investigation.

FY15 and FY16 Projected Actions:

- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Risk Assessment under 18 AAC 75.340 (f)
- Final Reporting under 18 AAC75.380

Project/Site Name:	**Tanacross AF DERP NALEMP Drum**		
Location:	Tanacross	Hazard ID Numbers:	868, 25179, 25180, 25181
Project Manager:	Melody Debenham	Ledger Code:	14229560
Primary RP:	U.S. Army Corps of Engineers		

Site Management Category: PRP

Site Type: Airport/Airfield

Situation:
The Native Village of Tanacross is conducting site characterization and cleanup activities at the Tanacross Airfield site under the Native American Lands Environmental Mitigation Program (NALEMP). The Tanacross Airfield is a former U.S. Air Force air field that was originally developed by the Civil Aeronautics Administration in the 1930s. The Bureau of Land Management is the current owner. A 2003 Strategic Project Implementation Plan identified 27 sites that may pose a risk to human health.

FY13 Actions:
DEC staff worked with the Native Village of Tanacross and the U.S. Army Corps of Engineers (USACE) through the NALEMP program on site characterization and cleanup activities. Petroleum impacted soil was removed from three areas of concern (the Alaska Communications System (ACS) site, the ACS Radio Station site, and the Aboveground Storage Tank (AST) Tank Farm/Former Fueling Station site), and groundwater monitoring wells were installed. Groundwater monitoring events were performed at these three areas of concern, as well the Drum Landfill site and the ½-Acre Dump Site. Contaminated soil and groundwater are present at the ACS site.

FY14 Actions:
DEC staff continued to work with the Native Village of Tanacross and the USACE on site characterization and cleanup activities. Remaining soil contamination at the ACS site was removed. Groundwater sampling shows that contaminated groundwater remains on site. A site investigation and removal action was performed at the landfill near the Small Arms Range site. 276 empty drums and 5 cubic yards of general debris were removed from the site and properly disposed of. Three drums containing product were found, and are staged on-site for future disposal. Site investigation activities were conducted at four areas of concern where military debris was identified (Tanacross Trail System/Trail Roads, WAMCATS Valdez-Eagle Trail, Nellie Probert Allotment, and Small Arms Range). Soil borings and temporary well points were installed at all four areas of concern. No contaminants were found above the cleanup levels at any of the sites.

FY15 and FY16 Projected Actions:

- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name:	**Tanana IHS Health Center**		
Location:	Tanana	Hazard ID Number:	116
Project Manager:	Meredith Savage	Ledger Code:	14624960

Primary RP: U.S. Department of Health & Human Services, Indian Health Services

Site Management Category: RP Lead
Site type: Petroleum, non-crude

Situation:
The Indian Health Service (IHS) hospital grounds have been contaminated in multiple areas by fuel releases from aboveground storage tanks, underground storage tanks, a bulk tank farm, and a fuel distribution system. The earliest known spill recorded occurred in 1975. Depth to an unconfined aquifer is between 10 to 28 feet below ground surface (bgs). In 1976 a drinking water well was found to be contaminated and was subsequently abandoned; a new drinking water well was installed at 97 feet bgs. Since 1992 through 2013 there have been multiple excavation events of petroleum contaminated soil. Early on there was some controversy regarding cleanup levels for groundwater, specifically, that groundwater should be cleaned to water quality standards because it was a source of drinking water. In 2000 an agreement was reached on site cleanup levels that included an institutional control that water at this site cannot be used for drinking water until it meets drinking water standards. Groundwater sampling began in 2002 and continues through current time.

FY13 Actions:
Site work consisted of groundwater monitoring, soil sampling, and excavation of contaminated soil in Zone 4. DEC oversight activities included reviewing and approving work plans and reports for these activities, a site visit, and attending a meeting with IHS, tribal, and contractor representatives.

FY14 Actions:
Site work included soil sampling, excavation of contaminated soil in Zones 1, 2, and 3, installation of replacement and new (additional) groundwater monitoring wells, and installation of soil vapor monitoring probes. DEC oversight activities included reviewing and approving work plans and reports for these activities, a site visit and onsite meeting with IHS, tribal, and contractor representatives.

FY15 and FY16 Projected Actions:
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **Tenakee Springs Tank Farm**
Location: Tenakee Springs
Project Manager: Danielle Duncan
Primary RP: City of Tenakee Springs

Hazard ID Number: 4251
Ledger Code: 14161060

Site Management Category: CSP Lead
Site type: Tank Farm

Situation:
In 2003, the City of Tenakee Springs hired Carson and Dorn (CDI) to investigate the contamination at the tank farm that the city purchased from the Kadashan Bay Corporation, operated by the Snyder Mercantile Company. Sixteen test holes were dug throughout the tank farm and the perimeter and diesel range organic (DRO) contamination was found. CDI recommended additional soil and water testing and the report was submitted to DEC.

In 2006, a Tenakee Springs citizen reported to DEC that the AEA and the City of Tenakee Springs were moving contaminated soil from the tank farm area and spreading it on the main road along the beach and side streets adjacent to gardens, drinking water wells, and the marine intertidal. The citizen collected soil and water samples which indicated DRO was present in the soil at a concentration of 3,100 mg/kg and the tap water had a concentration of 0.54 mg/L DRO. ADEC Southeast Area Response Team staff visited the site on May 11th, 2006 and collected soil samples from four locations near where the soil was reportedly transported. The laboratory data indicated that the contaminated soil was transported from the tank farm site to the road right-of-way (as fill) adjacent to residential drinking water wells.

In January of 2007, the DEC requested a work plan from the City of Tenakee Springs pursuant to site investigation of the tank farm and locations where contaminated soil was used as fill material on public right-of-ways. The following month a Corrective Action Plan submitted by the City of Tenakee Springs to the DEC was approved and work began to transport the contaminated soil from the public right-of-way to an approved upland City property for bioremedial treatment. In addition, the DEC requested that the drinking water well in the area be sampled. On December 3rd, 2007, Contaminated sites (CS) sent a letter to the Mayor of Tenakee Springs requesting an update on the status of the biocell where the soil was reportedly moved, however, no information was provided.

FY13 Actions:
On January 11th, 2013, CS contacted the current Mayor and confirmed that the transported soil remained in the approved location and that the City would submit a sampling work plan for soil and groundwater sampling in the spring. However, this work plan was never submitted despite numerous attempts by the CS program that were met with empty promises.

FY14 Actions:
As a result of successive nonresponsiveness, a letter was sent to the City of Tenakee Springs requesting a work plan be submitted within 30 days otherwise enforcement measures would be pursued. Thirty days later CS received a work plan completed by CDI to sample the biocell in addition to monitoring and drinking wells. Current photographs and a location map of the biocell location, the tank farm and a copy of the current Spill Prevention Control and Countermeasure Plan (SPCC) for the facility will also be supplied.

FY15 and FY16 Projected Actions:
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Tesoro Alaska Refinery**
Location: Nikiski

Hazard ID Number: 312

Project Manager: Paul Horwath
Primary RP: Tesoro Alaska Company, LLC

Ledger Code: 14964460

Site Management Category: RP Lead
Site type: Refinery

Situation:
Petroleum contamination of groundwater at the Nikiski Tesoro Refinery was first identified in the late 1980s. Environmental assessment work identified extensive soil and groundwater contamination. The site is being regulated under the Federal Resource Conservation and Recovery Act (RCRA) Corrective Action Order, and the facility is also governed under a RCRA permit. ADEC serves a secondary role in environmental oversight, and provides reviews of ongoing assessment and cleanup efforts in order to ensure that response efforts also comply with Alaska environmental regulations and concerns.

The majority of the releases from this refinery are attributed to historical leakage from subsurface oily-water wastewater lines and manholes. Groundwater contamination has migrated well offsite, and extends over to the Cook Inlet Bluff, across the North Kenai Road from the refinery.

Active and aggressive groundwater treatment systems operate on a full time basis. The RCRA Corrective Action Order focuses cleanup efforts on groundwater remediation firstly. After groundwater remediation has been deemed to have been accomplished to the extent practicable, the Corrective Action Order requires the initiation of soil treatment operations. Groundwater treatment efforts are projected to continue into the foreseeable future.

FY13 Actions:
Work consisted of operation of an extensive groundwater containment and treatment systems, continued groundwater and surface water contaminant plume identification, and continued long term groundwater and surface water quality monitoring.

FY14 Actions:
Work consisted of operation of an extensive groundwater containment and treatment systems, continued groundwater and surface water contaminant plume identification, and continued long term groundwater and surface water quality monitoring.

FY15 and FY16 Projected Actions:
- Site Characterization and Cleanup under the Federal RCRA Corrective Action Order
- Groundwater/Surface Water Monitoring
- In-Situ Groundwater Treatment System Maintenance, Operation, and Monitoring

Project/Site Name: **Tesoro Port of Anchorage (Tesoro Tank Farm #1 and Tesoro Tank Farm #2)**
Location: Anchorage
Hazard ID Number: 600, 911
Project Manager: Bill O'Connell
Ledger Code: 14697160
Primary RP: Tesoro Alaska Inc.

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
This ledger code covers two sites, Tesoro Tank Farm #1 and Tesoro Tank Farm #2, both of which are located at the Port of Anchorage (POA). Both of these sites have soil and groundwater that are contaminated with diesel, gasoline, and aviation fuels from pipeline and aboveground storage tank releases. At Tesoro #1, a product recovery system has recovered over 15,000-gallons of fuel that was released from a leaking pipeline in 2006. At Tesoro #2, contaminated groundwater is infiltrating a storm drain along the edge of the property, which is scheduled for repair in 2014 and 2015. A remediation system at Tesoro #2 is working to treat benzene contaminated groundwater before it leaves the property.

FY13 Actions:
At both of these sites, bi-annual groundwater monitoring was conducted and the treatment systems were in operation.

FY14 Actions:
At both of these sites, bi-annual groundwater monitoring was conducted and the treatment systems were in operation.

FY15 and FY16 Projected Actions:

- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name: **Thane Bunker Fuel Tanks**
Location: Juneau
Project Manager: Sally Schlichting
Primary RP: AJT Mining Properties, Inc.

Hazard ID Number: 899
Ledger Code: 14929760

Site Management Category: P Lead
Site type: Bulk Fuel Storage

Situation:
This site is located at the southeastern edge of downtown Juneau and consisted of two 1900's-era steel cylindrical bulk fuel storage tanks sited on a bedrock bench above South Franklin Street serving the ore processing mill for the Alaska-Juneau mine which ceased operations in the 1940s. The two tanks contained residual bunker fuel product which leaked over time as the tanks collapsed and were open to the environment over the subsequent 60 years. Product migrated through fractured bedrock and eventually to the marine waters of Gastineau Channel in the 1990s. The property at the time, Alaska Tram, cited inadequate financial resources to complete cleanup work. Multiple cleanup and mitigation efforts were made by ADEC and the USCG with varying degrees of success during the 1990s. Additional work was initiated by the landowner's inheritors in 2005, but was not completed. When the current landowner AJT Mining Properties, Inc. assumed control of the site, additional worked progressed through 2009.

FY13 Actions:
In August 2012, a site assessment (characterization) report was completed by the current RP to update ADEC on the current status and work remaining. The assessment confirmed five bioremediation cells in various stages of remediation at the site. DEC requested additional assessment and characterization. In February 2013 a revised cleanup plan was submitted for excavation and active remediation of soils on site along with additional assessment work. This was initiated in the spring of 2013 and continued into June.

FY14 Actions:
A final report was submitted to ADEC and the results were approved. A cleanup complete determination was issued by ADEC in December 2013.

FY15 and FY16 Projected Actions:
None. The site is now closed and ready for reuse.

Project/Site Name: **Togiak Fisheries**
Location: Anchorage
Project Manager: Eileen Olson
Primary RP: Northern Pacific

Hazard ID Number: 322
Ledger Code: 14895460

Site Management Category: RP Lead
Site type: Cannery/Seafood Processing

Situation:
The site occupies a five-acre parcel and adjacent marine environment on the south side of Togiak Bay, approximately 390 miles southwest of Anchorage. A cannery has operated seasonally at the site for at least 35 years, with the cannery processing buildings, fueling facilities and docks located on the approximately two-acre portion of the site that is on a spit adjacent to the estuary of Twin Hills River and the marine environment. Gasoline and diesel releases totaling over 35,000 gallons took place over a period of years from the early 1980s through 1987. Sources were primarily subsurface pipelines and tanks. Free product recovery by pump and treat and soil vapor extraction methods took place between 1987 and 1989, when the systems were shut down. During the 2000s over 7,000 tons of soil was excavated and treated on site and groundwater monitoring undertaken. Site closure with institutional controls including long-term groundwater monitoring was granted in August 2012.

FY13 Actions:
Site closure with institutional controls including long-term groundwater monitoring was granted in ADEC's letter dated August 7, 2012.

FY14 Actions:
ADEC issued a review letter on June 17, 2014 in response to NPSI's fall 2013 request to cease monitoring and decommission the 9 monitoring wells remaining at the site. The 9 wells were subject to the long-term monitoring requirements of the decision document dated August 7, 2012. ADEC approved decommissioning of 4 of the 9 monitoring wells and required additional monitoring of 5 wells during the summer of 2015. ADEC also required replacement of one of the 5 wells that could not be sampled for two monitoring events due to an obstruction before the next monitoring event and by July 31, 2015.

FY15 and FY16 Projected Actions:
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name:	**Togiak School**		
Location:	Togiak, AK	Hazard ID Number:	4587
Project Manager:	Keri DePalma	Ledger Code:	14249080
Primary RP:	Southwest Region School District		

Site Management Category: State Owned

Site type: Bulk Fuel Storage

Situation:
The Southwest Region School District requested DEC's assistance with environmental oversight in completing a cleanup and removal action. The objective of the project was to make the old BIA school property ready for transfer and reuse by the City of Togiak. Funding associated with the new school construction was available for limited site cleanup to facilitate property transfer; however, no funding was allocated for environmental oversight.

Renovations were planned for the northern half of the property for continued use as a school, with plans for the City of Togiak to use the southern half of the property as a recreational facility, meeting hall, and playground/park. Existing contamination hindered this reuse scenario. In August and September of 2008, more than 4,000 cubic yards of contaminated soil were excavated from the site and transported to a holding cell near the Togiak dumpsite. Confirmation samples collected after the excavation indicate that residual contaminated soil remains under some of the school buildings, groundwater contamination was suspect across the site and potentially entering into the bay, and vapor intrusion was a concern.

FY13 Actions:
None

FY14 Actions:
This work included groundwater monitoring and well/point installation and sampling, groundwater/surface water interface monitoring, and a vapor intrusion assessment. Multiple field sampling episodes were be completed to characterize the groundwater impacts across the property over time.

FY15 and FY16 Projected Actions:
Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name: **Trading Bay**
Location: Western Cook Inlet
Project Manager: Campbell
Primary RP: Chevron

Hazard ID Number: 1263
Ledger Code: 14884660

Site Management Category: RP Lead
Site type: Oil production facility

Situation:

This is a site that has contamination extending from the ground surface to the water table in most areas in the facility due to past work practices. Petroleum contamination has migrated via the groundwater to the adjacent beach. Marathon and Unocal have conducted several site assessments to determine the vertical and horizontal extent of contamination. A Compliance Order by Consent (COBC) was signed in 1996 between Unocal, Marathon and ADEC which required Unocal and Marathon to perform further monitoring/assessment/cleanup of the site. In 1996, Forcenergy bought Marathon's interest in TBPF. Hilcorp is the current operator. Monitoring is on-going.

FY13 Actions:

Continued groundwater and beach seep monitoring.

FY14 Actions:

Continued groundwater and beach seep monitoring.

FY15 and FY16 Projected Actions:

Continued monitoring under compliance order.

- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Unalaska Public Works PHP L2**
Location: Unalaska
Project Manager: Meghan Dooley
Primary RP: City of Unalaska

Hazard ID Number: 25652
Ledger Code: 14310960

Site Management Category: RP Lead
Site type: Residence

Situation:
The site formerly consisted of residential trailers and associated heating systems. In 2011, a 300 gallon UST was discovered along with contaminated soil during excavation and construction activities for a multi-level apartment complex. Over 4,000 cubic yards of contaminated or potentially contaminated soil was removed and sampled. Contaminated soil was stockpiled on Summer Bay Road for treatment. Additional contamination remains on site.

FY13 Actions:
Groundwater monitoring wells were installed and sampled. DRO was detected above Table C.

FY14 Actions:
Quarterly groundwater sampling was conducted at three wells.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Unocal Chemical**
Location: Nikiski
Project Manager: Campbell
Primary RP: Agrium Chemical

Hazard ID Number: 465
Ledger Code: 14906360

Site Management Category: RP Lead

Site type: Fertilizer manufacturing plant

Situation:

This plant has operated since 1967. A large amount of ammonia and other substances, including arsenic, have been spilled over the years and contamination of the soil and groundwater has occurred. Extent of contamination and health impacts unknown. This plant produces fertilizers and has had numerous spills and accidental discharges. It is suspected that the land and water may be polluted with arsenic, nitrates, and other pollutants. Formerly known as UNOCAL Chemical Plant.

FY13 Actions:

Review of annual groundwater/arsenic / nitrate monitoring data.

FY14 Actions:

Plant has been shut down for several years and is in the process of getting permits to reopen. CS will continue to review monitoring reports.

FY15 and FY16 Projected Actions:

- Groundwater/Surface Water Monitoring under 18 AAC 75.345

Project/Site Name:	**Unocal Granite Point**		
Location:	Granite Point	Hazard ID Number:	1280
Project Manager:	Campbell	Ledger Code:	14908860
Primary RP:	Conoco Phillips		

Site Management Category: RP Lead
Site type: Oilfield services

Situation:
There are several source areas within the tank farm that were assessed in the early 1993. There was ongoing monitoring but in recent years the site has languished. Hilcorp assumed ownership in 2012. ADEC requested a work plan for monitoring well sampling and the wells were sampled in 2014. Many of the wells are in disrepair. Hilcorp has agreed to assess the monitoring network and replace and repair the network to determine the extent of groundwater contamination.

FY13 Actions:
Work plan prepared from well sampling.

FY14 Actions:
State lead, none. The RP has conducted well sampling.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360

Project/Site Name: **Utica Mine**
Location: Deering
Project Manager: Curtis Dunkin
Primary RP: NANA Regional Development Corporation

Hazard ID Number: 4141
Ledger Code: 14155260

Site Management Category: RP Lead
Site type: Mining Operation

Situation:
A Phase I site assessment conducted in June, 2005 by ADEC Brownfields Program in coordination with NANA determined that the abandoned gold mine and surrounding areas of concern had soils contaminated with petroleum contaminants and metals. Drums containing unknown substances, numerous lead-based batteries, and asbestos containing materials in several of the structures were also present. In 2009-2010 NANA conducted limited site characterization and removal actions. Work involved characterization sampling and analysis of unknown wastes and liquids in drums, containerization and offsite disposal of batteries, and excavation and stockpiling of petroleum-contaminated soils. In 2011, ADEC issued a Notice of Violation and letter of warning to NANA's contractor and NANA respectively as a result of NANA's contractor conducting contaminated sites work without an approved work plan. ADEC requested that NANA conduct a site wide assessment and characterization investigation to determine the nature and extent of contamination associated with all areas of concern and to confirm that contamination is not migrating into the Inmachuck River.

FY13 Actions:
ADEC reviewed, submitted comments on, and approved the 2012 Site Characterization Work Plan, which NANA implemented in July-September, 2012. ADEC reviewed and submitted comments on the 2012 Site Characterization Report. NANA efforts resulted in a thorough site-wide characterization of the nature and extent of contamination at the site's areas of concern. Site characterization results confirmed that contaminants are not migrating to the Inmachuck River, although significant volumes of petroleum- and metals-contaminated soils remain on site.

FY14 Actions:
ADEC participated in several comment resolution meetings with NANA in an effort to finalize the 2012 Site Characterization Report and to develop consensus on remedial objectives and a path forward. Site visits were conducted by NANA to inspect the status and to manage stockpiled soils and open excavations. ADEC reviewed NANA's request for an alternative/background cleanup level for non-anthropogenic arsenic in soils and participated in a resolution meeting.

FY15 and FY16 Projected Actions:
- Site Cleanup under 18 AAC 75.360
- In-Situ/Ex-Situ Treatment System Installation, Maintenance, and Monitoring under 18 AAC 75.360
- Institutional Controls Maintenance under 18 AAC 75.375
- Final Reporting under 18 AAC75.380

Project/Site Name: **VECO Eastwind Inc., Former Storage/Maint Facility**
Location: Anchorage
Hazard ID Number: 2735
Project Manager: Eileen Olson
Ledger Code: 14626670
Primary RP: NORCON, Inc.

Site Management Category: RP Lead
Site type: Maintenance Yard/Shop

Situation:
Contaminated soil and groundwater were documented as early as 1992 at the former VECO Eastwind, Inc. heavy equipment storage and maintenance facility. Contaminant sources were surface spills from aboveground tanks, drums and wash down areas, and regulated diesel and gasoline tanks. Cleanup was accomplished during a property transaction that was completed in 1998 and the Alaska Seafood International seafood processing facility was constructed. Site closure was granted in May 1998 then rescinded three months later when additional contamination was encountered during ongoing earthwork and construction activities. Borings and groundwater monitoring completed in 2014 found no remaining contamination associated with VECO Eastwind's former operation.

FY13 Actions:
ADEC granted Cleanup Complete status in a decision letter dated May 23, 2014 that includes both the VECO Eastwind site closure and corrective action complete status for groundwater associated with Eastwind/VECO LUST site. (Soil at the LUST site was granted closure in a previous decision document - see file no. 2100.26.221 and Hazard ID no. 24736).

FY14 Actions:
None.

FY15 and FY16 Projected Actions:
None.

Project/Site Name:	**Wells Fargo Data Center**		
Location:	Anchorage	Hazard ID Number:	3993
Project Manager:	Evonne Reese	Ledger Code:	14143160
Primary RP:	Wells Fargo Bank		

Site Management Category: RP Lead
Site type: Commercial/Retail/Office

Situation:
During the removal of a 1,000-gallon underground heating oil storage tank (HOT) in 2003, petroleum-contaminated soil was discovered as a result of corroded holes at the bottom of the HOT. The HOT was initially used for storing gasoline, but had a change of service to store heating oil. Due to this change of service, the HOT is now regulated under 18 AAC 75 instead of 18 AAC 78 (UST regulations). This site is located in a commercial area and the building is used as an office for a communications company known as the General Communications Inc. (GCI).

Site characterization and cleanups activities were conducted between 2003 and 2013. The activities included excavation of 45 cubic yards of contaminated soil, soil sampling, groundwater monitoring, and indoor air monitoring.

FY13 Actions
Reviewed monitoring reports and documented the information in the DEC record. Groundwater wells were decommissioned in 2013 after monitoring showed that contaminant concentrations were below cleanup levels.

FY14 Actions
The Cleanup Complete Determination documentation was issued and institutional controls (ICs) were assigned to the site. The property was sold to GCI, the new landowner was documented in the database and a GCI representative signed the IC agreement.

FY15 and FY16 Projected Actions:
- Institutional Controls Maintenance under 18 AAC 75.375 – DEC will verify that ICs remain an effective remedy to receptor exposure.

Project/Site Name: **West Nome Tank Farm**
Location: Nome
Project Manager: Meredith Savage

Hazard ID Number: 575
Ledger Code: 14934760

Primary RPs: United States Air Force, Chevron, Crowley

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
The military built the West Nome Tank Farm to support the WWII Lend/Lease program. The land is owned by the Air Force. The tank farm was operated by the Air Force and subsequently leased to and operated by Standard Oil (now Chevron) and Crowley until 1991 when operations ceased. Extensive petroleum contamination is present in soil and groundwater at and downgradient of the site. Numerous site characterization and limited cleanup actions have occurred since 2001. Cleanup actions have been delayed due to debate over responsibilities / liabilities.

FY13 Actions:
DEC oversight activities entailed reviewing and approving plans and reports on groundwater monitoring, a draft cleanup alternatives analysis report, meetings with the responsible parties and attorneys on developing site cleanup and management plans.

FY14 Actions:
DEC continued oversight activities included reviewing and approving plans and reports on groundwater monitoring, a revised draft cleanup alternatives analysis report, requesting additional characterization and cleanup plans and participating in meetings with the responsible parties and attorneys on developing site cleanup and management plans.

FY15 and FY16 Projected Actions:
- Settlement Agreement / Compliance Agreement
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **White Pass 6-Mile Spill**
Location: Skagway
Project Manager: N/A
Primary RP: White Pass and Yukon Corp.

Hazard ID Number: 2540
Ledger Code: 14619860

Site Management Category: RP Lead
Site type: Railroad Operation

Situation:
Arctic diesel spill from ruptured pipeline (by heavy equipment nearby) at 6-mile along White Pass railroad in October 1994. Highest level of diesel range petroleum remaining was 4,600 ppm. Initial site investigation conducted in November 1995 (14 test pits, soil samples collected and analyzed). Groundwater monitoring wells were installed in 1997 and water (ground and surface) quality monitored annually until 2000. Fertilizer was applied to contaminated soil in summer 1998 to enhance bioremediation. Continued monitoring in 1999. In 2000, more monitoring and test pits were advanced to define vertical extent of contamination plume. Seven hundred cubic yards of contaminated soil excavated in September 2002. Small amount of contaminated soil remains beneath the railroad tracks. In 2003, the excavated soil was placed in a smaller bioremediation cell near the Skagway Tank Farm cell. In 2008, initial ETM ranking conducted by ADEC staff. In 2010, ADEC staff wrote letter to RP requesting status update of remediation project. Project file transferred from Anchorage to Juneau in June 2011.

FY13 Actions:
ADEC staff conducted a file review to evaluate for closure in December 2012. ETM ranking updated for new source area (Broken Pipeline, source area ID 73517) in January 2013. Cleanup Complete Determination issued by ADEC staff in April 2013. Another ETM ranking by ADEC CS staff for Broken Pipeline source area.

FY14 Actions:
None.

FY15 and FY16 Projected Actions:
None.

Project/Site Name: **White Pass & Yukon Railroad Yard**
Location: Skagway Hazard ID Number: 400
Project Manager: Bruce Wanstall Ledger Code: 14891160
Primary RP: Pacific & Arctic Railway & Navigation Company

Site Management Category: RP Lead
Site type: Railroad Operation

Situation:
Surficial soil contamination consists of polyaromatic hydrocarbon compounds and heavy metals. Subsurface soil contamination on-site consists of solvents and hydrocarbons. Free phase petroleum is floating on groundwater under the main shop with solvent and hydrocarbon groundwater contamination on-site with low potential to migrate to municipal groundwater wells. Historical sources of contamination include degreasers, solvents, waste scrap metal, waste batteries, metal ores, and chipped railroad ties. Interim Removal cleanup of on-site soil has reduced current exposure risk. The extent of subsurface soil and groundwater contamination is generally defined by investigation. Sampling to characterize and monitor contamination is reported on an irregular basis. Municipal drinking water wells are located 2,300 feet from site which is beyond the two year capture zone.

FY13 Actions:
DEC met with White Pass to discuss the current status of cleanup and characterization activity that has not moved forward under direction of the new White Pass President. Correspondence with the department has been negligible, therefore; DEC asked that monthly reports be submitted to continue an open dialog between the department, responsible party, and consultant. DEC returned to Skagway to attend the annual groundwater sampling and test pit soil sampling in September by consultant Golder & Associates.

FY14 Actions:
DEC met with White Pass & Yukon Route President John Finlayson, Superintendent of Rail Operations Mark L. Taylor, Director of Safety & Labor Relations Tyler Rose, and Golder Associates Senior Hydrologist Tamra Reynolds and Principle SH Gary J. Hamilton in Skagway to discuss the transition of DEC project management from Denise Elston to Bruce Wanstall for the Rail Yard Shops site. DEC reported to WP&YR that correspondence, site work and reporting by Golder has been acceptable. Golder delivered to DEC a hard copy of the 2013 Site Characterization Report for the site. Drilling of new groundwater investigation wells at the site begins Thursday June 12, 2014.

FY15 and FY16 Projected Actions:

- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Post Cleanup Groundwater/Surface Water Monitoring under 18 AAC 75.345
- Site-specific analysis under 18 AAC 75.340 (i)(2)

Project/Site Name: **White Pass Coach Cleaning Shop**
Location: Skagway
Project Manager: Sally Schlichting
Primary RP: White Pass and Yukon Route

Hazard ID Number: 3268
Ledger Code: 14285760

Site Management Category: RP Lead
Site type: Maintenance Yard/Shop

Situation:
Former location of a railroad car wash down shop which operated from 1898 to 1982 when the railroad ran from Skagway to Whitehorse, Yukon. The site is located close to downtown Skagway, at 21st and State Streets. In 1998-99, ADOT&PF reported diesel fuel on the water table in an excavated test-pit on the western edge of State Street adjacent to the property. At the time petroleum contamination was reported, the property was occupied with one small office/storage building heated by electricity. ADEC requested that White Pass and Yukon Route conduct characterization on the property to determine if a source was present. This work was carried out in 2000, with excavated material removed and treated offsite. No onsite source was identified. Contamination appeared to have been migrating from an offsite location in the State Street right-of-way.

FY13 Actions:
ADEC determined no further action was necessary and issued a cleanup complete determination.

FY14 Actions:
None.

FY15 and FY16 Projected Actions:
None. The site is closed and ready for reuse.

Project/Site Name: **Wilhour Trust Property**
Location: Anchorage
Project Manager: Meghan Dooley
Primary RP: Cook Inlet Housing Authority

Hazard ID Number: 4145
Ledger Code: 14343860

Site Management Category: RP-Lead
Site type: Commercial/Retail/Office

Situation:
A Phase II environmental assessment found trichloroethylene (TCE) in soil at this site, which was a former machine shop and a follow up investigation also found TCE in groundwater. The property is the site of a re-development initiative by Cook Inlet Housing Authority, Alaska Housing Finance Corporation, and a consortium of private investors. A multi-unit housing development for low income occupants and seniors will be constructed over the next several years. ADEC worked with the development group and the Department of Law on a Prospective Developer Agreement whereby the development group agreed to conduct a groundwater investigation and follow up monitoring in exchange for a release of liability for the contamination at the site.

FY13 Actions:
In FY13, several meeting were held between the development group and ADEC regarding the investigation results and proposed development at the site.

FY14 Actions:
In FY 14, ADEC entered into a legal agreement with the development group as noted above.

FY15 and FY16 Projected Actions:
- Interim Removal Action under 18 AAC 75.330
- Site Characterization under 18 AAC 75.335
- Site Cleanup under 18 AAC 75.360
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name:	**Wrangell Oil Bulk Fuel Facility**		
Location:	Wrangell	Hazard ID Number:	3728
Project Manager:	IC Unit	Ledger Code:	14995660
Primary RP:	Wrangell Oil, Incorporated		

Site Management Category: RP Lead
Site type: Bulk Fuel Storage

Situation:
The site is located on Point Shekesti, just south of downtown Wrangell. Facility was constructed in 1932 and 1992 began operation under the name Wrangell Oil Bulk Fuel. The facility was upgraded in the early 1990's. Contaminants found onsite were initially reported in 2000. Soil screening detected diesel range organics (DRO) up to 5,340 mg/kg from historical use as a tank farm. Consulting firm conducing site assessment claimed that contamination migrated downgradient to a Delta Western Wrangell site. Fuel is presently sold to community from this site.

Preliminary site ranking in 2001. Alaska Department of Environmental Conservation (ADEC) staff confirms that site is being placed on "hold" due to focus on off-site contamination associated with downgradient Delta Western facility. A 2004 site visit conducted by ADEC staff included GPS coordinate verification and pictures. Initial ETM ranking conducted in February 2008. In April 2010, ADEC staff issued Potentially Responsible Party (PRP) letter to Wrangell Oil, Inc. In July 2010, ADEC determined that excavation of contaminated soil was impractical due to steep gradient of underlying bedrock. In December 2010, ADEC staff reviewed and conditionally-approved Carson Dorn, Inc.'s (Carson Dorn) "Site Investigation Work Plan (October 2010)" ADEC staff conducted a site inspection in May 2012 with the Responsible Party (RP), Wrangell Oil, Inc. to discuss future removal effort for remainder of summer 2012.

FY13 Actions
ADEC staff reviewed Site Assessment Report by Carson Dorn and deemed compliant with ADEC-approved site work plan. On March 2013, approximately 130 tons of contaminated soil were excavated to bedrock and backfilled with clean material. Contaminated soil was shipped to Rabanco in Washington State. Four of the six total confirmation soil samples collected during this excavation contained DRO above the Table B2 soil cleanup level. The maximum remaining DRO was 8,970 mg/kg at the north wall, four feet below ground surface.

FY14 Actions:
Cleanup Complete Documentation issued in September 2013. Standard institutional controls, plus requirement to report to ADEC the status of land use. Institutional Control (IC) compliance review conducted and reminder system set-up to communicate with RP about groundwater monitoring well decommissioning in August 2014. ADEC staff is also scheduled to check with RP in 2018, five years from closure letter decision per Institutional Control #1. ADEC staff received signed IC's agreement page from RP.

FY15 and FY16 Projected Actions:
- Institutional Controls Maintenance under 18 AAC 75.375

Project/Site Name: **Wrangell Sawmill**
Location: Wrangell
Project Manager: Sally Schlichting
Primary RP: Silver Bay Logging

Hazard ID Number: 25786
Ledger Code: 14320860

Site Management Category: RP Lead
Site type: Log Processing/Sawmill

Situation:
The site is a former sawmill originally owned and operated by Alaska Pulp Corporation until 1995 when it was sold to Silver Bay Logging. Silver Bay continued limited operations until 2008. In 2006 a Phase I Environmental Site Assessment was conducted that showed contaminated surface soils at the sort yard, tank farm, and a storage lot for used equipment and above ground storage tanks. In 2011 a Phase II was conducted that verified petroleum contamination in 10 areas across the 50-acre facility.

FY13 Actions:
Characterization and cleanup activities began in summer of 2012. By the end of the year, excavation and cleanup was performed at twelve areas at the facility. Additional cleanup work was performed in 2013. Altogether, 9,645 cubic yards of petroleum contaminated material was excavated and stockpiled on site. At this stage, all areas met the ingestion and inhalation cleanup levels approved for the site.

FY14 Actions:
In summer of 2013 the material was screened down to 6,260 cubic yards and placed into a series of five bioremediation cells and treated with fertilizer amendments and frequent tilling. In the fall, 111 confirmation samples were collected and were found to meet the cleanup levels at a 95% upper confidence limit of the mean concentration in each cell for both diesel and residual range hydrocarbons. The material will be used as fill and stabilization material onsite. ADEC issued a cleanup complete determination in January of 2014.

FY15 and FY16 Projected Actions:
None. Site is now closed and ready for reuse.

Project/Site Name: **Yakutat Ocean Cape Radio Relay Station**
Location: Yakutat, Alaska
Hazard ID Number: 1985
Project Manager: Jessica Morris
Ledger Code: 14245760
Primary RP: U.S. Army Corps of Engineers

Site Management Category: RP Lead
Site type: Military Installation – Radar/Radio Relay Station

Situation:
In 1960, the United States Air Force (USAF) acquired land to construct the Ocean Cape Radio Relay Station (OCRRS), a radio link between Cape Yakataga and Hoonah, Alaska. The OCRRS served as a tropospheric communications station as part of the Ballistic Missile Early Warning System under the White Alice Communication System. The OCRRS included eight industrial buildings, 17 miscellaneous support facilities, including water and fuel tanks, fuel and water lines, four 60-foot tropospheric antennas, an access road, a bridge, and utility lines. The OCRRS was declared excess by the USAF in June 1976. The land was relinquished to the BLM in 1977, and conveyed to the Yak-Tat Kwaan, Inc. village corporation in 1983. Since then it has remained the property of Yak-Tat Kwaan, Inc.

The tropospheric dishes, industrial buildings, and associate equipment at the OCRRS were removed during the U.S. Army Corp of Engineers (USACE) cleanup activities in 1984. The USACE established a cooperative agreement with the Yakutat Tlingit Tribe (YTT) to address the OCRRS Formerly Used Defense Site (FUDS) under the Native American Lands Environmental Mitigation Program (NALEMP). The YTT removed the large fuel tank and fuel pump-house and the water tower and water pump-house from the site in 2009. In 2011 the Garage Building was demolished and disposed, including asbestos-containing siding and PCB-containing siding and caulking. The concrete slab was left in place and floor drains were covered with pieces of plywood bolted to the slab. A large fuel tank, a heavy equipment maintenance shop (Garage Building), a water tower, a water pump-house, and a fuel pump-house remained at the site. Results from previous site investigations at the OCRRS indicate that PCB, petroleum, and metals contaminated soil is present onsite.

FY13 Actions:
A summary report was prepared for the Petroleum-Contaminated Soil Removal Action and Site Investigation that was conducted during the field season 2012. Workplans were prepared and reviewed by DEC for additional Petroleum-Contaminated Soil Removal and a site investigation at the former Tower Area, both at the OCRRS, and a workplan was prepared and reviewed a site investigation at the YTT Culture Camp.

FY14 Actions:
A summary report was prepared for the Petroleum-Contaminated Soil Removal Action and Site Investigation that were conducted during the 2012 field season. A work plan was prepared and reviewed for additional Petroleum-Contaminated Soil Removal at the OCRRS. The additional Petroleum-Contaminated Soil Removal was conducted during the field season 2013.

FY15 and FY16 Projected Actions:
- Uncertain, depended upon the USACE entering into another NALEMP Cooperative Agreement with the YTT.

Project/Site Name: **Yute Air Terminal Dillingham**
Location: Dillingham
Project Manager: Bill O'Connell
Primary RP: ADOT&PF

Hazard ID Number: 1889
Ledger Code: 14907660

Site Management Category: State Owned
Site type: Airport/Airfield

Situation:
Spill response activities in 1994 resulted in a stockpile of petroleum contaminated soil that was transported offsite to private property. The stockpile was removed from private property and remediated via landfarming between 2011 and 2013

FY13 Actions:
Work consisted of final tilling, sampling, and spreading of landfarmed soil

FY14 Actions:
This site was closed with institutional controls in FY14

FY15 and FY16 Projected Actions:

- Institutional Controls Maintenance under 18 AAC 75.375

OIL AND HAZARDOUS SUBSTANCE RELEASES

ALASKA STATUTES

Sec. 46.08.060. Report. (a) The commissioner shall make available a report to the legislature not later than the 10th day following the convening of each first regular session of the legislature. The commissioner shall notify the legislature that the report is available. The report may include information considered significant by the commissioner but must include:

(1) the amount of money expended by the department under AS 46.08.040(a) during the preceding two fiscal years.

(2) the amount and source of money received and money recovered by or on behalf of the department during the preceding two fiscal years under
(A) AS 46.08.020; and
(B) AS 46.08.025;

(3) a summary of municipal participation in the department's responses that were paid for by the fund;

(4) a detailed summary of department activities in responses paid for by the fund during the preceding two fiscal years, including response descriptions and statements outlining the nature of the threat; in this paragraph, "detailed" includes information describing each personal services position and total compensation for that position, each contract in excess of $10,000, and each purchase in excess of $10,000; and

(5) the projected cost to the department for the next two fiscal years of monitoring, operating, and maintaining sites where response has been completed or is expected to be continued during the next two fiscal years.

(b) As part of the department's on-going identification efforts associated with oil spill or hazardous substance release or waste sites, the commissioner shall include in the report under this section

(1) the number of sites that are included in the department's contaminated sites data base, whether the site is active or closed; and

(2) a prioritized listing of those sites, both statewide and by community, based on the immediate and long-term threats to the public health or welfare or to the environment.

(c) In addition to the department's report required under (a) of this section, the governor shall submit a report about use of the fund during the previous two fiscal years to the legislature not later than the 10th day following the convening of each first regular session of the legislature. In the report, the governor shall describe in detail the governor's use of money from the fund, with separate explanations, by agency, of the activities that were paid for under the authority of AS 46.08.045.
